1208. trunking radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-19 00:00:00 UTC
From: Vincent Roy <ldee@sympatico.ca>
Message-ID: <32925D93.2141@sympatico.ca>
Source record: 212493

Hi,
I want design a board who can decode data send by repeater to the
mobile in a trunking Johnson LTR system.
What kind of modulation is used for transmitted the data at 300
bps in the subaudible frquency?
Thanks
Vincent Roy

That may be ok but to interfer with others using the 70 cm. band is not part
of the game plan to whom ever this may concern Ed KE6BNL

There is a mod, (by cutting a few diodes) that will change the 10 Khz per revolution to 5 Khz per revolution. I misplaced my sheet on how to do this. Anyone out there have that information??

While encryption is NOT illegal, encryption over amateur radio IS illegal,
and it's use would lead to the detriment of amateur radio. It would give
the money grabbing politians and the money paying frequency grabbing
interests of big business the opportunity for congress and the FCC to
take away yet another chunk of VALUABLE AMATEUR RADIO SPECTRUM.

*** Please read the following regarding Codes and Cyphers***

You may not hide the meaning of your communication by
putting them into codes of ciphers [91.113(d)]. In this context, codes
and ciphers refer to text that has been transformed to conceal it's
meaning. This restriction is consistent with the Commission's obligations
under international regulations that amateur communications be made
in plain language. Universally accepted abbreviations may ve used,
however, when the intention is not to hide the meaning of the
transmission; common Q signals, for example.
The rules do not apply to the legitimate use of secret
telecommand codes used to protect the security of a space station
[97.207(f)].
Also, repeater trustees can use authentication codes to secure
access to control functions of a hilltop repeater. (Authentication
codes are sent by control operators to the repeater control functions -
the repeater checks, or authenticates, the code to ensure that the
commands are coming from an authorized control operator.) Universally
accepted touchtone pad tones are not considered to be codes and ciphers;
their use in traditional repeater and other applications is fine.

*** Quoted from "The FCC Rule Book Guide to the FCC Regulations" 9th
*** edition, ARRL
***

The above very clearly spells out that it is illegal to use Codes or Cyphers over amateur radio with two very specific, narrow, and well defined exceptions.

Lets keep amateur radio clean of politics, and devoid of anything but open, clean, honost conversation. Amateur radio should have the content that children can listen to (if they are interested.) Amateur radio is intended as "A radiocommunication service for the purpose of self-training, intercommunication and technical investigation carried out by amateurs, that is, duly authorized persons interest in radio technique solely with a personal aim and without pecuniary interest." [97.3(a)4]

I VERY MUCH support the use of PGP and PGPphone... however, lets keep it off of amateur radio. Licensed amateurs who are interested in keeping the amateur service alive and well in America are struggling to keep it as clean and as pure as it has been over the years. Granted,there are problems, but encryption would very quickly lead to procecution of individuals and (more seriously) the removal of spectrum from amateurs by the FCC and congress for auction to the highest paying bidder.

We NEED PGP, and PGPphone for our internet, e-mail, computer, and telephone communications to ensure privacy, and I believe that without an iota of doubt in my mind. I have great respect for Phil Zimmerman, and all who help promote the values he, his ideas, and his software promote. His encryption package most certainly has it's place.

I hold privacy in extremely high regard, along with free speech. However, via amateur radio, there is no expectation of privacy, and no attempt should be illegally made to obtain it. Improper use of our precious amateur radio spectrum will lead to it's confiscation. Spectrum losses would not only punish all amateurs in removing their hobby, but their hobby, but also all of society who reap the benefits of amateurs who using these frequencies volunteer their time and skills when the need arises.

Don't think I am making this up... it has been happening. Take for example our 220MHz band. A big chunk was taken away for business interests who were unable to impliment the technology they proposed.
(I think they attempted Double sideband data transmissions
with a suppressed carrier
in a mobile environment ... what were UPS thinking??)
Business interests abandoned the frequencies but the FCC never returned the allocation to Amateur radio use. This trend could get worse.

As another example, just recently in the massive 2,000 page omnibus Consolodated Appropriations Act, which congress passsed and the President has signed (now Public Law 104-208) amateurs will be forced to leave a large portion of the 2.3GHz band. Yes... we are loosing frequencies, and without appropriate use of what we do have, we will loose more.

Become active: write your representatives, support the ARRL (which is our only real lobbying group), and use our ability to self police our bands to run off activity which is inappropriate on our bands. Amateurs have a lot to offer society when we are needed. We need our frequencies to be available in time of need. Don't let public spectrum be sold off to business interests.

SB QST @ ARL $ARLB083
ARLB083 Vanity call update

ZCZC AG63
QST de W1AW
ARRL Bulletin 83 ARLB083
From ARRL Headquarters
Newington CT November 19, 1996
To all radio amateurs

SB QST ARL ARLB083
ARLB083 Vanity call update

Vanity update: The ticket's in the mail.

The FCC says hard copies of the November 4 grants were mailed on
November 8 and November 12, so new call sign holders should have
their new tickets soon. Unsuccessful applicants will get dismissal
notices once the FCC works through its stack of WIPS--or
works-in-process-- those applications that need some kind of special
handling. As many as 550 first-day applications ended up in the WIPS
pile, either because the FCC was unable to match one of the
applicant's call sign choices or because the application had other
problems. Some of these were as simple as a date of birth on an
application that was missing or failed to match one already in the
FCC's database. Others included an incorrect call sign on an
application, a name change not reported, or putting first and last
name in the wrong order.

If you're in the WIPS pile for a reason other than ''no match,'' a new
call sign already may have been attached to your application. So
far, there have been 3805 successful Gate 2 applicants. Many 1x2
call signs remain. As of this week, more than 6000 1x2 calls in all
US districts remained available. The FCC has not said when it will
process the approximately 1400 Gate 2 applications that were
received after September 23, the opening day for Gate 2.

If your application is dismissed, you will have to apply to the FCC
in writing to obtain a refund of your application fee. The FCC will
not apply your first 30 dollar(s) filing fee toward a second application.
You
must request a refund if you want your money back.

The topic of closed repeaters my come up often, especially here in Southern California, due to the fact nothing is being done in a way of a solution. I really don't think it has anything to do with the holidays. New hams get their ticket every week. If a request for a frequency pair is sent to SCRBBA, it is ignored, unless your trying to put up a private or closed box. In the case of a very popular repeater here, I understand the privite freq was monitored for a long time. It was never activated, thus is was one of those "paper" repeaters. The club used this freq pair for 2 1/2 years until the coordinating group found out. Then guess what, Suddenly after 2 1/2 years its "true owner" wanted to reclaim his "property". Maybe we all sould pick a private "paper" freq pair and monitor it. Check for activity. If none is found, post the frequency in hope someone who has been waiting for freq pairs will be able to open and put the freq on the air for all hams.
73 Mike

1221. Re: Closed Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-19 00:00:00 UTC
From: Harold Hartley <haroldh@agate.net>
Message-ID: <01bbd66a$888add20$220a75cc@haroldh.agate.net>
Source record: 212506

If one wants to have a closed or private repeater, then they should take it to a freq that is not heavily used. ex: on the 222, 440mhz or 1.2 ghz band allocated to repeaters. 2 meters is crowded enough without tieing up 2m for closed or private repeaters...
There's plenty of bands out there, why not use them or we will lose them..

thanks..

1222. Looking for single frreq. UHF radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-19 00:00:00 UTC
From: p06288@email.mot.com
Message-ID: <56t5ou$e98@trotsky.cig.mot.com>
Source record: 212507

I am looking for a single frequency UHF radio for packet use in the 440-450 mhz band. Crystal controlled is OK if I can use the unit at 9600 baud. I don't know what kind of radios will work but I need 10 watts or so output on the single frequency and it must be usable on 440 mhz.

Any ideas????

Please contact jim at gerwitz@inficad.com

Thanks

Jim

If CW is outdated, what mode that can be used with a simple RF oscillator took its place? Until the no-code all-pro techni-gurus introduce such a mode, let the code requirement stay. All the high-tech theory is worthless if a ham can build but not be able to operate a simple transmitter due to lack of knowledge.

A friend of mine who had worked for AEA sent me the following:
"As for AEA, it may not be legally out of business, but that would be a formality. Product lines have been being offered for sale for the last couple of weeks, after no one was found to buy the company outright. As I understand it, Friday was the last day for what remained of the staff, and that has been a skeleton crew for the last month or so. Mike Lamb came back and took it over early in the year from Rod Proctor, who had been president of the company for about three years. Unfortunatly Mike saw the light a little too late to save the company this time."

This is no longer in the "rumor" category.

Thanks for the reassertion of the kilohertz frequency and the "Lowfer"
definition, Gary.

I'm still looking for Boston area, low frequency, listeners. This band is
a lot of fun because the power is the same (1 watt) for all operators, and
there are numerous variables that must be addressed if you plan to
transmit or receive over any reasonable distance. The receiver can be as
simple as a slightly retuned WW-2 vintage BC-453 available at most
hamfests for $8 - $20. The popularity of this band, in the Boston area,
unfortunately, has fallen over the last five years.

Any lowfers out there?

Why should anyone be able to build a transmitter at all? Most of the hams never build just about any gadget besides a simple dipole. And that's just fine. Building radios oneself is just not worthwhile if one has a steady job to earn money for commercial radios. I regret I ever built a linear myself, it took so much time I could easily have bought two from the nearest store instead.

FOR SALE :

SONY ICF-SW77 World Band Receiver Radio
** Top Of The Line - 1994 **

SPECIFICATIONS:
Tuner Type: PLL DIGITAL Synthesized
Memory: 162 Random
10-Key Access
Automatic Scan Tuning
SSB (Single Side Band), USB and LSB modes
Frequency Range:
FM: 76 - 108MHz STEREO
LW / MW / SW: 105 - 29,999 KHz
Antenna System:
FW / SW: Telescopic
LW / MW: Ferrite Bar Antenna
LW / MW / SW: Ext. Antenna Terminal
Four Inch Speaker
Large Backlit LCD Readout: Frequency and 6-Character Station Name.
5-Event Programmable Timer
Clock with Alarm
Batteries: DC 6V, C x 4
AC Adapter
Input / Output Jacks:
Headphone (REC OUT)
AM Antenna Input
Size: 10 3/4" x 6 5/8" x 1 3/4"
Weight: 3lb. 4oz.
Original LIST PRICE: $659.95

I purchased this radio new in 1994. I bought it for myself for Christmas mostly because I kept reading about in several advertisement and it sounded like a lot of fun. Regretfully I was never able to take advantage of this dream hobby. The radio is in excellent and new condition with very little use. Basically I opened the box played with the channels settings for about an hour then put it away in it's original packaging. It has been in storage in my closet every since. It's very tempting to take up the hobby again, but frankly, I still don't have the time, plus I need the money to go toward an engagement ring for my fiancï¿½ to-be.

This premium unit has more features, "bells and whistles", than I can list. It even includes a world time scale", LCD contrast control, a key protection mode, dial lock, etc. The list goes on and on. It

comes with accessories including: the 170 page manual, SONY 6V (AC-E604) AC Power Adapter, SONY (AN-71) Compact Antenna (attached hanger clip antenna reel-in carrying case), Stereo Earphones, and Carrying Strap. I will also include these un-used books:

World Radio TV Handbook, 1994 Edition, by WRTH.
600p Published Price $ 19.95.
1994 Passport to World Band Radio, 10th Anniversary Edition.
432p Published Price $ 17.95

$500.00 + SHIPPING .... FIRM ....

If you are interested, please contact me at banister@rio.com. If you would rather speak to me on the phone, I can arrange that after receiving your e-mail. If you are in the area of EUGENE, OREGON, feel free to ask to visit and see the unit.

I have a portable Antenna Analyzer for sale.
It is a portable unit run from NiCad batteries with charger. It uses a
LCD 4 digit frequency counter, an analogue SWR / %reflected power
scales read direct. No radio Tansmitter needed. It sees exactly what
the radio sees.
Only R2200-00. Still under guarantee. Used only once.
Ideal for the antenna experimenter.

Call Rob @ +27 11 882-9182 (011) 882-9182

Hello,
I am fairly new to radio and am not familiar with many of the Older Motorola radio's that are around.
My question is.. Is there a motorola radio that does (or can after some simple modification) transmit in the 90-100MHz Range? If so what is the model number and what are the going prices on such radios? I have access to some older motorola equipement and just was wondering wich model to start looking at.
Please... only helpful comments. Thanks in Advance.

1248. DXCC and the Vanity Callsign program....

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-20 00:00:00 UTC
From: Joe <joentam@transend.com.tw>
Message-ID: <32939E22.25D@transend.com.tw>
Source record: 212369
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

An interesting question: will the DXCC count QSL cards that are from a new
"vanity" callsign but worked via the "original owner" of the call? Will
they start checking the "date of QSO" and comparing it to the "date of
callsign reissuance" ?

Reason I ask: A buddy with a new vanity call contacted the widow of the
calls former owner. She just sent him 8 huge boxes of QSL cards (worked by
the original holder of the call). The original owner had worked 'em all
(plus lots of deleted countries) but never applied for DXCC, so the desk is
essentially "ignorant" to the matter.

Just curious. 73 and thanks for opinions. Joe BV/N0IAT in Taipei TAIWAN.

Source record: 212371

I purtchased a IC-3230H from him via Fed Express. The radio
had no RF output on UHF. When I opened the case to see if anything
was possibly disconnected...a capacitor fell out of the case and I
could smell the odor of burnt transistor smoke.
Of course he dinies any of this and upon confronting him via
email he said this and I quote,
>>Let me know what it costs for the repair
>>and we'll see if we can work something out. Again I'm sorry this happened.
>>
>>73 de
>>Pete
>>kc4wwu

BTW here is what he said originally:

>I have for sale an ICOM 3230H dualband
>>It is in Great Condition
>>Comes with all original accessories
>>Also comes with Speech Unit &
>>DTMF / PL Decode Unit
>>
>>Asking $350.00 plus shipping obo

Anyway...he can now say what he wants in response to this but
the facts are that the radio was not operating properly and I had to
spend several hundred dollars for ICOM to repair it.
The money is spent and I now have a great radio....so I have
the last laugh.

BTW I have since found out some interesting things about Peter
Dulac from previous friends of his. If there was ever any doubt about
him before ... I now have no doubt that he is not to be trusted!!!

DO NOT BUY ANTHING FROM HIM UNLESS YOU WANT TO SPEND MONEY TO
FIX IT.

1251. discharging NiCads

Newsgroup: rec.radio.amateur.misc

Hi. Does anyone have genuine information about discharging Nicads? I've heard a number of things which may or may not be accurate. For example

(a) does anyone have a reference to research on 'memory' on Nicads? I've seen it described as an 'alleged memory effect'.

(b) how far can/should you discharge Nicads? I've heard from one source that you should completely discharge Nicads to store them. I've heard elsewhere that you should never completely discharge Nicads because 'it's bad for them'. Is there a threshold voltage below which you should't go, and for how long etc. The ARRL Handbook suggests you shouldn't go below 1v per cell, but my Yaesu FT-50 has a cutoff which switches the set off if the battery voltage for a six-cell pack falls below 4v or so - much less than 1V/cell.

(c) I've heard it said that discharging before charging is good, but the I've also heard from manufacturers that you get more cycles if you don't completely discharge.

I'm building a charger, and I'm planning to discharge before charging. I'm going to use a comparator to switch from discharge to charge, and I need to know these things so that I can set it up right! There's a lot of things I've 'heard' and other things I've read in books, but I'm not sure what to rely on because there seem to be so many conflicts when you put it all together.

Thanks for any help

There is also no rule that says you cannot transmit on the output or input
of a repeater and if they key up on you, it is interference, plain and
simple. So, if you find a closed repeater, ask them why it is closed.
Find out how to join the group. If it is unsatisfactory.....

I too have heard all these things, and the opposite. I recall an article
in Wireless World in the late 1970s which went into this in some detail.
Unfortunately I lent it to someone...

So I can't really help with definitive answers. But there is one thing
which is almost certainly a bad thing, and that is completely discharging
a set of NiCd cells *connected in series*. Because of variation in their
individual capacities, some of the cells discharge before the others,
and continued discharge beyond that point, driven by the cells not
yet discharged, reverse-charges the weaker ones. I think practically
everyone agrees that reverse-charging is a Bad Thing.

Steve,

Sorry to say, but as a new tech you will find that you are not welcome on many repeaters, not just in Southern California. You don't have to be a new tech, either, to get the cold shoulder.

The fact of the matter is, there are many repeaters across the country which are closed despite the claim of being an "open" repeater, simply because the people on these repeaters won't talk to outsiders. This, in my opinion, is what makes a repeater closed.

Yes, some groups openly state the fact that outsiders aren't welcome, but many others do it quietly, leaving the person to wonder how they have offended them.

Each area seems to have one or two repeaters which welcome new hams or talk to out-of-towners. These usually get labeled as the "geek" or "CB" repeater. The rest of the many machines in town (30 or so, in the case of Columbus, Ohio), sit idle all day long until the members of the group get on after work. Then it gets used for 45 minutes, cools off for 16 hours, and perks up again in the morning. The same people, talking to each other, day after day.

The labels "closed" or "open" are really not as much a factor as is the "personality" of the repeater or group of people that use it. I think you would find lots of closed repeater operators who would be more than willing to help in time of need. Yet, I have heard calls for help remain unanswered on repeaters that were operated by large clubs who supposedly welcome new members and who operate "open" repeaters.

>seen it described as an 'alleged memory effect'.

The actual effect is a slight (around 0.05?) volt drop during the
discharge at the "memory point". The alleged (ie. essentially false)
effect is a loss of capacity. The capacity is still there, just
delivered at a slightly lower voltage which large quantities of poorly
designed equipment cannot cope with.

>(b) how far can/should you discharge Nicads? I've heard from one source

I think somewhere around 0.9V (that's what the circuit in the current
ETI uses) is the generally favoured figure. I don't think I have seen
anyone advocate less than 0.8V and certainly 1.0V is often quoted.

That FT-50 voltage you quote is crazy, it would allow one ailing cell
to be reversed charged and killed for good. I think the "idea cut-off"
would be at least 1.2(n-1) volts when one cell drops to zero and the
others are still delivering their run-of the mill terminal voltage. On
a 6 cell pack that works out pretty well - 6.0V is one weak cell
(5x1.2) or 6 discharged cells (6x1.0). For greater than 6 cells you
may have to choose between capacity and protecting the weak cell. Note
though that even with the cutoff on the battery pack set down to
(n-1)V a slightly weak cell gets some protection, as long as the rest
are down to 1.0V by the time it drops to zero volts.

>(c) I've heard it said that discharging before charging is good, but the
>I've also heard from manufacturers that you get more cycles if you don't

See my comment on (a), which is good depends on whether you want
cycles or voltage.

>put it all together.

Remember to discharge CELLS and then recharge the BATTERY - that takes
them all down to a common point and then puts the same no of Ah into
each.

Much I hate to say this, unless you have an odd set of cells to deal
with, it will probably be much cheaper to buy one from Maplin - they
do (or did amyway) one that discharges 4 AA/C/D cells individually and
then recharges them in pairs (well I think it charges them in pairs,
don't quote me on it!)

Hope that helped, over to the chemists for the intricacies!?

KAWIN NEWS - Announcing KaWin 6.45

KaWin Home Page: http://www.mutadv.com/kawin/

KaWin 6.45 is ready for download! Corresponding changes to
the help file too. KaWin 6.45's enhancements were suggested
by KaWin users YO3JF and KD1NE. Thanks Ion and Ron!

In-line, keyboard macros - all of the macros supported for
Quick Keys and files are now available as you type.

The HF Mode Switch menu now pops-up for quick mode switching
when you click on the HF on-the-air box in the KaWin Status
Bar.

Users of non-English Windows versions will appreciate the
ability to turn off "slashed zeros".

The CQ Robot now permits calling intervals from one second
to two hours.

Problems copying and saving selected text are fixed.

The KaWin help file has been updated to reflect these
enhancements, but does not yet include the FAQ, "Tips" or
the suggested expansions.

I'm continuing to assemble notes for the addendum to the
KaWin Help file. This will add "Frequently Asked Questions"
(FAQ), and "Tips" topics to the Help file, and your
contributions are needed. Input is solicited from tire-
kickers as well as new and old registered users.

Please send all contributions to: stan@mutadv.com

You neglected to say which of the three MARS services you
were interested in. There are web sites for MARS at the
national, regional, and area levels for the Navy-Marine
Corps MARS system.

Point your web browser to:

http://www.maf.mobile.al.us/~navymars/index.html

This is the Navy-Marine Corps MARS home page. It has links
to all other affiliated web sites. These often have e-mail
addresses for various MARS officials.

Up until the early 80's it was required that you show proof
of having a license prior to purchasing an Amateur Radio
Transciever.. And up til that time we were required to see
a valid copy of a amateur license prior to selling a xcvr to
anyone.. The change was brought about by people who
threaten to sue for discrimination for refusal to sell a product
in a retail store that was open to the general public.. I will see
if I can find the ruling and post it... I believe that Radio Shacks
ads say "License Required to Operate" As it stands to day
there is no legal way to refuse the sale of any xcvr to anyone
who comes into a retail establishment and wishes to purchase.
Almost every retailer I know sells this equipment and tells the
customer that you must be licensed to operate it... It is a matter
of personal responsibility on the equipments usage..

1267. Re: 2 meter repeater Jammers

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-20 00:00:00 UTC
From: gsparks@ix.netcom.com
Message-ID: <56vdqr$47i@sjx-ixn4.ix.netcom.com>
Source record: 212388

snipped all

The jammers quickly go to another machine or get bored if they think they are not getting attention.

We had a jammer who always came on about the same time every evening, we arranged to have QSO's with each other with the telephone and 2 meter. When he would jam, we continued on the phone, and into the mike, when he let up, we would be in the middle of a conversation, a couple of nights like this, and he either decided he wasn't getting out anymore, or he moved to another frequency.

I have often found that jammers pick on an individual or group, and is often a licensed ham, I have visited several clubs, and heard one guy bragging about shutting down another's club repeater by repeatedly calling a commercial service that played music and advertisements while giving the time and temp. He also bragged about someone being on his 75 meter frequency and turning on his amp and clicking to tune until they left. I didn't join that club, but have heard they have cleaned up a lot.

The non licensed users of 2 meter usually try to pretend to be a ham, make up call signs, use dead people's call signs (this is my reason for opposing the vanity call), when we suspect one of these, we try to keep him talking and steer him into giving himself away, with where he works, kind of car he drives, etc.

A difficult problem, but blaming Radio Shack or HRO or any vender is not the answer, we are supposed to be self policing, which means we have to work to keep our ranks clean and operating practices proper. Complaining here does nothing to help the problem.

There is no *legal* requirement that Radio Shack, HRO, AES or any other seller of radio transmitting equipment verify that the buyer is licensed to operate on the band on which the equipment would operate, whether it is amateur or commercial. As far as the FCC is concerned, responsibility for proper operation falls on the *operator* rather than the seller.

At one time, some of the ham-run retail establishments like HRO or AES may have taken the high *ethical* ground and asked for proof of being licensed, but today they would likely get sued for doing the same thing. As far as places like Radio Shack, I'm not sure if most of the people working there could tell a valid license if they saw one.

Since most of the ham equipment sold today is sold through mail order, how would this be verified, anyway? Most of us pay by credit card to expedite shipment (among other valid reasons). What about swapmeets?

Don't forget -- if sellers were required to verify licensing, you might just not find that rig that the XYL bought for you, under the Christmas tree. :-)

: Bob.

Bob,
I think there's a little more to it than that.

Considering the fact that the RF output of the VCR is going to be around
66dB re 1uV (I've got a Memorex with specs of 66 +/- 3dB) means that
you'll be looking at 69dB (about 2.8 mV) max into the peak detector.

Assuming no losses in the detector means that the output of the detector
would be about 1.4 millivolts peak DC, hardly enough to qualify as a logic
level in any logic family I'm familiar with.

Obviously some gain is required to solve the problem, perhaps a
comparator on the output of the detector, with the comparator's output
coupled to the input of a one shot and OR'ed with the output of the
one shot, the one shot's period being made long enough to smooth out
any chatter caused by the AM in the output of the detector.

> with a suppressed carrier
> in a mobile environment ... what were UPS thinking??)
>Business interests abandoned the frequencies but the FCC never returned
>the allocation to Amateur radio use. This trend could get worse.

UPS planned to use ACSSB (amplitude compandored SSB with a pilot tone).
This is a (relatively) narrowband technology (which the ARRL was pushing
for amateurs a few years ago), and the FCC looked favorably on it as a
way to put more users in a given amount of spectrum. However, before the
FCC acted, UPS decided to just use cellular phone modems instead, and never
applied for system licenses in the 220-222 MHz band. Others did, however.
The band is now busy with reduced bandwidth FM signals (2.5 kHz deviation),
mostly sending data. It turns out that ACSSB isn't as great as people once
thought, and reduced bandwidth FM is nearly as good for packing density
while being cheaper to implement.

The FM capture effect is of more use in a moderate signal level
environment than is the compandoring of SSB in ACSSB. It turns
out that co-channel stations at a distance are less likely to
cause interference using FM than using ACSSB. So while reduced
bandwidth FM isn't as narrow as ACSSB, channel reuse can occur
at shorter spacings, and that allows more stations to use fewer
channels overall. (This is the same principle as is exploited by
AMPS cellular.) Of course there are even better ways to increase
packing density, including various CDMA SS methods.

>As another example, just recently in the massive 2,000 page omnibus
>Consolodated Appropriations Act, which congress passsed and the
>President has signed (now Public Law 104-208) amateurs will be forced
>to leave a large portion of the 2.3GHz band. Yes... we are loosing
>frequencies, and without appropriate use of what we do have,
>we will loose more.

The loss is sobering, but it is only 7.1% of our allocation at 2.3 GHz.
It is half of the most desirable part of the band for weak signal work,
however, because microwave ovens make the upper portion of the band
untenable for weak signal activity. OTOH, there isn't much weak signal
activity, and we can use the cheap microwave oven magnetrons to generate
high power on the upper part of the band. And coupled with highly directional

antennas, we can establish nearly jam-proof fixed point to point high speed data or FM ATV links that way.

>Become active: write your representatives, support the ARRL (which is our >only real lobbying group), and use our ability to self police our bands >to run off activity which is inappropriate on our bands. Amateurs have >a lot to offer society when we are needed. We need our frequencies to be >available in time of need. Don't let public spectrum be sold off to >business interests.

Frankly, the spectrum losses so far have been in very lightly occupied parts of our spectrum. 220-222 MHz was lightly used, and 2.3 GHz is all but unused except for a small amount of weak signal activity (satellite users and terrestrial Dxers). If we want to save these bands, we need to be *using* them much more aggressively.

Weak signal operators aren't occupying them to the degree that would impress the FCC, Congress, or the public. That's because there aren't a lot of weak signal operators, they normally use narrow modulation methods, and they only operate sporadically (mostly during contests). We need to be pushing high speed data and FM ATV activity on this band every day if we hope to retain it. And we need to be looking for ways to increase occupancy of all our other amateur bands as well. That may require us to take another look at what sort of uses really are appropriate for our various bands.

We can't claim to need spectrum we aren't effectively exploiting. That just makes us look absurd to the regulators. The spectrum is a *public* resource, not an amateur resource, and if we aren't using it effectively to accomplish our charter goals, which are the public interests which allow our service to exist, then it is the responsibility of the regulators to assign it to someone who will exploit it in the public interest. The FCC has made it very clear that it will no longer be US policy to warehouse spectrum for *potential* future uses. If the spectrum isn't being effectively used, it will be reassigned to a service which will use it.

The only real reason we've retained any access to spectrum above 1 GHz is that most of it is shared with the military. They've been able to defend it for us. But that's changing now. Even the military is no longer going to be allowed to warehouse spectrum. In fact, *we* may have to defend their spectrum for them in the coming years by keeping it busy in peacetime.

We make good sharing partners with the military because we can be easily shut down in case of war without a serious economic impact. Other services may be considered more essential to the economy, and thus could be harder to displace. For example, cellular has become a major economic part of our telecommunications infrastructure, and it would be difficult to shut it down if the military needed some additional spectrum. Various wireless internet services (some

satellite based) also want spectrum for their own uses, and if they get it, they could become as economically important as cellular, and as hard to displace. DAB also wants a place in the sun, and would also be hard to displace once it became an established consumer service.

Amateur communications has virtually no economic value, however, and is easily displaced at need, so keeping large amateur allocations is a way for the military to have a reserve of frequencies easily available to them in time of need. That's why the military continues to come to our defense in spectrum allocations. But we need to do our part as well by actually using those allocations or even the military won't be able to keep them for us in the changed regulatory climate.

I also think that the ARRL's push for an amateur exclusive allocation at 2.3 GHz is a strategic mistake. Unless we can rapidly occupy it, it would then become a prime target for other services, and we wouldn't have the friendly military as our allies in defending it. I think that instead the ARRL should make it policy to maximize sharing opportunities with the military. We are both non-economic users of spectrum, and are natural allies to defend our share of it from economically important commercial uses.

(And make no mistake, commercial uses *are* in the public interest since they primarily provide economically valuable communications services to the public, their natural market. That's the way the free enterprise system works. Any other course is communist or socialist State allocation of resources, and those allocation methods are proved failures at serving the public interest, except in non-economic matters.)

> linears.
> ...<SNIP>

Nonsense. Gas ovens, matches, electrical outlets in houses, swimming pools, etc. are all lethal. Yet no exam is required to use those items. If a person can use a CB radio and a microwave, they can use a manufactured radio without having to know what Ohm's law is, what reactance is, what a field effect transistor does, what a triode does, etc.

The point I am making is this: quite a bit is asked of the Ham in the exams. Not all of it is relevant to each Ham. If you start asking, "this part I'll never use, so why must I study it?", then we can use that same argument on pretty much all of it. For example, I have no plans on ever using a phase modulated TX/RX. Should I therefore complain about having to know what it is, how it works and what it's block diagram looks like? After all, why should "they" stop me from transmitting just because I don't know such information. All I need do is buy my radio from Yeasu - I don't need to know that stuff inside it (I'm being sarcastic of course).

IMO, if we reduce the exams to the absolute lowest common denominator, we can expect the government to then step in and take away our right to construct transmitters without approval. Even given the (IMO) relative inadequacy of the current exams, they provide enough information for the home-brewer to know what to watch for WRT emmisions purity, etc. Besides, if requiring such technical knowlege were eliminated, would we then be much better for it? IMO, No.

Perhaps it is a sign of my UK-centric education, but wasn't it John Logie Baird, a Scot, who built and demonstrated the first television device? It was based not on a videcon and CRT, but on synchronised rotating wheels with slits in them, a light sensor at the TX and a modulated light at the RX.

Jim,

There are a multitude of reasons why anyone or any organization might
want to make their repeater closed or private. But first I think we
have to define the terms.

In my opinion a closed machine is a misnomer since the machine is still
in operation but access is restricted to specific amateurs. So from
this point forward let's just refer to them as private repeaters.

Some of the reasons for a repeater to be private would include
a financial investment by members of the group and as such they want
to keep the repeater to themselves. Another reason is that certain
amateurs (such as known jammers) are clearly not welcome on the machine
and every operator is carefully screened before admittance. These
are just two of the possible issues and I'm sure there are many more.

What is your definition of simple? Is anything beyond
a continuous wave oscillator considered complex?

So it's not knowledge that is important. Rather, it's the ability
to to open and close a switch using the correct coding sequence
at the appropriate ARRL/FCC specified data rate! (Recall that
nowhere does the ITU specify a rate for Morse code.) And if you
cannot first master this all-important technique, further attempts
at knowledge acquisition are useless.

Reasonly on a trip thought my home town
of dayton ohio, I decide to call a old
friend on one of the high profile repeaters
"KMC 145.11 " only to hear a group off hams
" Nocoders, TECH+ " Not sure which, whisleing,
using Good Buddy, 10-4, keying the mike at
the same time to see who could get into the
repeater first. There was also one using a
roger beep and echo on his radio. The 145.11 KMC
repeater was a very good one when I left dayton
about 6 years ago. If there are any dayton hams
who read this group could you inform me of what
has happen to KMC 145.11 . After hearing this kind
of garbage go on for 45 min and not hearing any
control ops. tell them to stop, I will'nt be using
this repeater any more.

>way to put more users in a given amount of spectrum. However, before the
>FCC acted, UPS decided to just use cellular phone modems instead, and never
>applied for system licenses in the 220-222 MHz band.

The people who were supposed to do the project for UPS were NOT mobile
radio types ... UPS got suckered ... and lost ...

>Others did, however.
>The band is now busy with reduced bandwidth FM signals (2.5 kHz deviation),
>mostly sending data. It turns out that ACSSB isn't as great as people once
>thought, and reduced bandwidth FM is nearly as good for packing density
>while being cheaper to implement.

Not entirely correct Gary ... the form of ACSSB covered in one of my
patents is FAR better than the older tone-above-band technique which was
simply the kludge of a pilot tone on a pretty conventional SSB radio
architecture ... there are big disadvantages to the "conventional"
approach ... my scheme uses a pilot at channel center, with the single
sideband symetrically superimposed about the pilot ... the pilot is, in
fact, the actual RF carrier, so the system is capable of all of the
benefits of full coherence ... in the receiver, the pilot is recovered
in the first stage of a two-stage demodulation process and processed to
give a full characterization of both the fading phase and the fading
amplitude of the multipath channel (on a sample by sample basis) and
feedforward correction signals for both axes are generated and applied
to the final stage of the demodulation process ... voila, the faded
signal "collapses" back to the unfaded state, with the amplitude and
phase errors imposed by the multipath channel removed to the limits of
precision of the processing ...

Oh, by the way, the same signal processing architecture can also
generate and detect FM and virtually anything else you'd like ... in
its most flexible form, it's a completely programable "universal RF
modem" architecture ...

A pilot-aided version of 16QAM is one of the higher density digital
modes that this system can implement in the mobile multipath environment

is (perhaps 64QAM, 256QAM is questionable) with the "fuzzy" symbols the receiver sees coming out of the multipath channel being collapsed back to nice, crisp points in the demodulator ... this virtually eliminates the loss of decision space and the resulting irreducible error rate effect that is commonly experienced with denser constellations in the multipath channel ...

>I also think that the ARRL's push for an amateur exclusive allocation
>at 2.3 GHz is a strategic mistake. Unless we can rapidly occupy it,
>it would then become a prime target for other services, and we wouldn't
>have the friendly military as our allies in defending it.

This is a very good point, Gary ... we DO need to move towards heavier occupancy or someone will want it (probably whoever buys the part of the band that we're just now losing ...)

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter

>(a) does anyone have a reference to research on 'memory' on Nicads? I've
>seen it described as an 'alleged memory effect'.

Check the old faithful Gates Battery Handbook. NiCad memory is a very special and unusual condition which can only occur under very specific and unusual conditions. It was first discovered in satellite operation where the batteries were *precisely* discharged to the same end point again and again orbit after orbit. All reserve capacity below the precise discharge point became unavailable due to NiCad "memory" after a number of such cycles (some hundreds of cycles).

It is very easy to avoid NiCad memory. All you have to do is randomize the discharge end point so that it doesn't occur at *precisely* the same percent capacity each time. That means don't *always* wait for the radio to shut off at its low voltage trip point. Sometimes recharge the pack sooner than that.

If NiCad memory *does* occur, it can be cured by discharging the cells of the battery *individually* to zero volts, then giving the battery a full recharge at a low rate to allow the cells to equalize. You must *never* fully discharge an entire battery pack as a unit. This is virtually certain to cause the weakest cells to reverse and sustain unrecoverable damage. The damage may not be immediately fatal to the pack, but it will certainly shorten its useful life severely.

>(b) how far can/should you discharge Nicads? I've heard from one source
>that you should completely discharge Nicads to store them. I've heard
>elsewhere that you should never completely discharge Nicads because
>'it's bad for them'. Is there a threshold voltage below which you
>should't go, and for how long etc. The ARRL Handbook suggests you
>shouldn't go below 1v per cell, but my Yaesu FT-50 has a cutoff which
>switches the set off if the battery voltage for a six-cell pack falls
>below 4v or so - much less than 1V/cell.

1 volt per cell is a conservative figure. At 1 volt per cell, the cell is 90% discharged. It can be dangerous to the pack to draw it down far below that point due to the chance of cell reversal. Most modern NiCad packs are factory matched to better than 10% capacity, so you can go down a bit below 1 volt without cell reversal in most cases. If your pack isn't well matched, however, (say it's old, or a non-OEM replacement)

then going much below 1 volt per cell should be avoided.

NiCads self-discharge in storage, so no matter what state of charge they have when put in storage, they'll come out of storage discharged if storage time is prolonged. Self-discharge does *not* harm the cells. That's because they aren't driving currents through their neighboring cells during self-discharge, the current path is internal to each individual cell. Thus you won't get any cell reversals from natural self-discharge.

>(c) I've heard it said that discharging before charging is good, but the
>I've also heard from manufacturers that you get more cycles if you don't
>completely discharge.

That's absolutely true. Every time you exercise the chemical system in the cell, some of the reactions are irreversable and a portion of the reactants become unavailable for further use. So the battery eventually "wears out" from charge/discharge cycles. The less you discharge for no purpose, the more useful life you'll get out of the cell. So you should only discharge to useful purpose, IE to run the radio, and not to avoid the illusory "memory effect".

Ordinary NiCads are rated for about 500 full charge/discharge cycles, but with partial charge/discharge cycles you may get thousands of cycles before the battery becomes unusable, and all of that stored energy will be used to good purpose, not wasted heating a resistor.

>I'm building a charger, and I'm planning to discharge before charging.
>I'm going to use a comparator to switch from discharge to charge, and I
>need to know these things so that I can set it up right! There's a lot
>of things I've 'heard' and other things I've read in books, but I'm not
>sure what to rely on because there seem to be so many conflicts when you
>put it all together.

Discharge before charge is an old idea. It was somewhat useful in the bad old days when the only way to charge a NiCad was with a timed constant current charge. The discharge put the battery in a known state so that the timed charger wouldn't *overcharge* the battery. Overcharge is the number one (and two and three, etc) cause of premature battery failure.

Overcharging has irreversable (and somewhat reversable) effects on a battery. The irreversable changes are cell overheating and loss of reactants. Both are deadly to battery life. The somewhat reversable change is called "voltage depression". This is what most people mistakenly call "memory". Overcharging a battery generates a *surface charge* which is quickly depleted, causing the battery voltage to fall quickly and prematurely before most of the battery capacity has been accessed. This *looks* like memory, but it isn't memory. And unlike true memory, it has permanent detrimental effects on cell life.

(The recovery mechanism for voltage depression is the same as for true memory, though, fully discharge each cell *individually* and do a slow recharge of the pack.)

Modern NiCad chargers don't use a timed constant current. A modern pulse charger gives the battery a pulse of current then applies a load and measures the battery terminal voltage, then gives another pulse of current, applies the load again and takes another measurement, and so on. At each measurement, the terminal voltage should rise slightly because the current pulse is much greater than the draw of the test load. When the battery reaches full charge, however, there will be a small "droop" in terminal voltage of a few millivolts before voltage rises again as surface charging starts. When this "droop" is detected is the time to *stop* charging. The battery is at maximum *usable* capacity and further overcharging can only do harm.

This pulsing happens very rapidly (usually 60 times a second in a charger made in the US). There are special ICs available which automate this charge cycle, and QST had a project charger which used a microcontroller to duplicate the action of these special ICs. This is the *best* known way to charge NiCads for long life. Yaesu's NC-42 charger works on this principle (as do many others).

A less desirable way to charge NiCads is to have a thermistor in the pack which is read by the charger. When battery temperature starts to rise, overcharging has already begun. Using this as the cutoff does some damage, but not nearly as much as a straight timed charge can do. Icom's old BC-35 used this method.

It works great and frustrates the heck out of 'em...

We call it "the gadget," or "the jammer eliminator."

When activated, it makes the jammer completely ineffective
at jamming the repeater.

How does it work?

1) Listen for the jammer.
2) Allow him/her/it to jam for a little while.
3) Go to the repeater site with 2 or more people.
4) Disconnect the receive antenna, continuing to
use HTs through the repeater.
5) Listen for the signs of frustration as the jammer
realizes it just isn't working!!! Hmmm, the conversation
is unaffected!!!

Not that I have anything to complain about, or that this effects me in
any way, but... Sounds to me like the people whos applications were sent
in too early have no beef with the FCC. Sounds like their gripe should
be with the delivery service. It is a shame that these people are
going
to hold up the program for the rest. Hey sue the courier, not the FCC.

1295. Yaesu FT51R Off Frequency Problem

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-20 00:00:00 UTC
From: Lindsay Collins <lcollins@lcollins.mv.com>
Message-ID: <3293F8B8.2000@lcollins.mv.com>
Source record: 212416

Has anyone else seen this one, or does my FT-51R have and exclusive feature?

My FT51R appears to store the correct frequency into memory on both bands. However, on the VHF side, the actual transmit and receive frequency can be as much as 9 kHz off (plus or minus) from the display of the memory stored frequency. This does not occur on the UHF side, nor does it occur in the VFO. A frequency is direct entered into the VFO and is right on; store it into a memory channel, and it may or may not transmit or receive on the frequency displayed. There does not seem to be a pattern as to where in the band the frequency is, if it is a simplex or + or - offset. It DOES appear to be exclusive to the expanded TX/RX (soft feature Band 7) mode.

Anyone else seen this in their FT51R??? Thanks in advance.

If you put your own time, sweat, and hard earned money into a repeater or repeater network, you also might think about making it private or closed. I have 440 machines here in Southern California and to have them as open repeaters would defeat their entire purpose. That's why I built them - so I could get away from the open repeater crowd.

Hi Scott, hams are friendly and nice in Arizona *because* the repeaters
are not closed. Closing a repeater is the best way I know to bring
out the worst in hams. IMO, closed repeaters *are* the problem just like
closed public restrooms were a problem when and where I grew up.

1311. Newbie Question???

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-21 00:00:00 UTC
From: Pete Jameson <pjameson@aits.com>
Message-ID: <32948286.792B@aits.com>
Source record: 212316

Hello There,
I am a student at Purdue University studying Data Communications.
We have studied wireless LAN systems and the professor stated they
usually operate at between 902-928Mghz and did not offer any more
explanation than that. I am interested in learning more about
wireless communication and I have many questions. If you have the
time I would appreciate answers to any of the following questions.

Thanks in Advance,

Pete Jameson
pjameson@expert.cc.purdue.edu

I am basically concerned with the overall process. As I stated above
I know literally nothing about radio communications. I have a
definition from my book that states "Hz or Hertz is a measure of radio
frequencies in cycles per second." This does not really clear up a Hz
cycle for me, do you know of another more descriptive definition?
What consitutes a cycle?

I am getting ahead of myself here, I have always equated frequency
with pitch. A higher frequency has a higher pitch, and a low
frequency has a lower pitch. Is this a correct assumption? If so I
would apply a frequency at 900 Mghz as being a lower pitch than a
frequency of 928Mghz. Is this a correct assumption?

The following is my overall description of how RF work, any comments
would be greatly appreciated. A device makes a noise at a certain
pitch (frequency) which is sent out over some distance where another
device must be able to 'hear' the same pitch for the frequency to be
understood.

if you have made it this far THANK YOU!!!

Pete

In article <56q62f$4g6@news.asu.edu> wmunsil@aztec.asu.edu (WILLIAM W MUNSIL) writes:
>
>Now that we've solved the question about the inventor of radio,
>who invented television?
>I vote for Philo T Farnsworth (who even appeared on "I've got a secret",
>a 1950's TV show.

Television has several fathers. The German Paul Nipkow invented the first television system in 1884 using a mechanical scanning system. In 1922, US inventor Philo T. Farnsworth developed an electronic scanning system. In 1926, John Baird, a Scot, invented an infrared scanner for use in the dark. But it was Vladimir Zworykin, working for RCA, who invented both the iconoscope and kinescope in 1923 which allowed the sort of television we would recognize to be done.

The earlier inventors used a single "pixel" which was exposed to a subject illuminated by a scanning system in order to generate the television signal. And they used a single "pixel" projected by another scanning system to deliver the picture to the viewer. Zworykin's iconoscope on the other hand worked like film in that an image was focused on the tube face and the charges photoelectrically generated by that image on the tube target were scanned and read by an electron beam. Thus it had the many "pixels" of television as we know it. His kinescope is, of course, the ordinary cathode ray tube we all watch today, again with many "pixels" excited by a scanned electron beam.

The idea of mechanical scanning in the image path died hard, however. In the 1950s, CBS reintroduced the idea in order to do color television. Their system used a synchronized filter wheel with the three primary colors in order to do color television with a single B&W pickup tube. This system worked, and was even carried by the Apollo astronauts to the Moon, but it was inferior to the three tube system fielded by RCA which was soon universially accepted as the method to do color television. (The sequential scan system had objectionable color flicker since only 10 frames of each color were taken each second.)

Today we use three CCDs instead of tubes, and process the images with lots of ICs and other surface mount components instead of 300 pounds of vacuum tube circuits, but otherwise our cameras are very little different in principle from the huge old TK-41s of the early color broadcasting era with their three 4 inch diameter image orthicons.

Those old beasts made great pictures too, real HDTV, if you could supply enough light to illuminate the faces of those monster tubes.

(Their scanned area was larger than 70mm film, for *each* primary color. There was no need for artificial enhancement tricks to get superb resolution.) Today we have to use signal processing tricks in order to fool the eye into believing our pictures have high resolution, but our cameras can work in very low light while the monster TK-41 required a working light level of 1,000 foot candles. (That's why TV studios used to have *huge* air conditioning systems, and why some old studios are so cold today with our puny 125 foot candle peak highlight illumination.)

The idea of a single "pixel" system with scanned illumination hasn't entirely disappeared either. We call them "flying spot scanners" and we still use them to transfer film to tape. But they aren't the mechanical monsters of the early days. A CRT is used as the scanned illumination source and a sensitive solid state photodiode is used as the single pixel pickup. Of course the illumination is transmitted *through* the film to the pickup in contrast to the early inventors' schemes which depended on the scanned illumination *reflecting* from the subject back to the pickup device (a photomultiplier tube in those days).

Although I don't agree with your stance WRT CW, I must say you gave a reasoned and detailed response.

Hmmm, I wonder if, with a continuous carrier and FSK (using just the human with receiver and BFO to decode it), one would be able to pull a weaker signal out of the noise (relative to OOK).

Also, I wonder what the minimum practical frequency difference would need to be (say 200Hz on a 500Hz tone, for example). I guess one would try to set the beat frequency as low as possible so as to maximise the tone differences in the receiver. Meanwhile, I guess one would try to minimise the frequency shift when transmitting, so as to use less bandwidth.

This seems like an interesting angle on Morse. I like the idea as it is still a minimalist approach that potentially uses little bandwidth. I guess the biggest question is how easy is it to learn to understand FSK compared to OOK? Also, is it easier or more difficult to pull out a signal if there's a pileup?

--

Cheers,

Chris. Broadbent (KC5VQL)

NOTE: My email address in this post is modified to prevent spam. Just remove the '.nospam' from the end of it if you wish to email me. It sucks that I must do this, but the amount of unsolicited crap I'm receiving now makes it necessary.

> Can a human with receiver and BFO understand the (FSK)
> signal (honest question)?

Hi Chris, the question pertained only to transmitting and that's the question I answered. However, given a receiver and BFO, a $20 microcontroller can easily decode FSK. The microcontroller that exists in the receiver already could do the job so adding FSK decoding to existing receivers would be a no-brainer. Any of the DSP filters could also decode FSK for no additional hardware cost except display or ASCII output. All we need to do is demand it. FSK has an inherent 3dB advantage over OOK CW.

Then I guess I could put my 'closed repeaters on 'your' frequuencies to serve my purpose.

I agree with your sweat, time & money on the equipment. But we also have a lot of closed repeaters that get VERY little use because these repeaters are used by so few.

Suppose you wanted to put up a repeater now in So. Cal.?

IMHO,

: grounds would be for such a lawsuit? As far as I know, no one has to
: sell you squat if they don't want to (except for real estate)--it's
: just that it's a tremendously bad business practice to refuse to sell
: to someone for no apparent reason. Or is it just that the US has gone
: so goddamn sue-happy, that we think we can sue everyone for
: everything....? What about not selling liquor to someone who doesn't
: have proper ID? Comments from lawyers?

The problem is, courts and juries make some pretty crazy rulings sometimes, so someone being sued really doesn't know what he might expect to happen. Most companies want to avoid the courts, if possible. Can you imagine what the negative publicity would look like if it reached the media?

I'm no attorney, but, as someone already mentioned, I think is has to do with being open to the public in a retail capacity; perhaps discrimination.

Maybe Roger will venture over from the thread on closed repeaters and give us an example of case law. Counselor?

Poor example on the sale of liquor. Law requires that sellers verify that the buyer is of age, and the burden of proof is on the buyer.

: >>...most of the ham equipment sold today is sold through mail order...

: Interesting assertion. Any factual data to back this up?

I'll admit that this was an educated guess. But, look at how few walk-in ham retail outlets there are, even here in our part of SoCal. Even at that, I'd wager that HRO, AES and maybe even Jun's do more mailorder business than walk-in business.

I suppose I could ask HRO, if it's really a major concern.

No opinion, never used one. When I used to do that, I used a
speaker-mic.
But I was much younger and dumber then ;)

>
> * What is the best way to secure my HT to the bicycle? Ideally, it

Advantage to wearing it: lower shock. Disadvantage: you are attached
to the antenna on bike. I prefer to put the radio in a front pack and
secure it with judicious use of bungie cords. I used to use an old
IC-2AT when I did this, however. Your radio may have more densely
packed
controls on it.

A front pack with a good bungie cord suspension isn't quite as shock
proof as you are, but it ain't bad either.

Another advantage to the front pack: you can add a bigger battery
there and run higher power --even a power amp if you're really crazy.

>
> * I think a simple dual-band mobile-style antenna would probably be

> rack to fit over my rear wheel.

Good arrangement. I used something very similar and it worked.

> Is there a mobile antenna mount that
> would easily and securely attach itself to such a rack? Can anyone
> recommend a particular antenna/mount combination?

I suggest securing the antenna to the side of the rack mount strut which
goes down to the rear wheel. You'll want to make sure your rack is

good and sturdy, of course. You might get a better installation if you secure a piece of steel along the side with screws and a clamp or two. Then you can drill the steel and use a marine antenna mount.

>
> Anything else I should keep in mind?

Yeah, make sure you can still mount the bike. With an antenna mounted as I have suggested, you won't be able to comfortably swing your leg over the back to mount your back. One way to get around this problem, if you use the marine antenna mount, is to swivel the antenna down before mounting the bike. You can then swivel the antenna up after you mount the bike (a bit of string or fishing line attached to the antenna might help here).

Another issue: Your bike is not a good groundplane. You should try to get an antenna which doesn't need much of a groundplane -- i.e. not a 1/4 wave or 5/8 wave. Get something like a half wave vertical. Also make sure the thing is relatively flexible (to smash in to branches and the like)

While a 1/4 wave requires a groundplane, a dipole doesn't, if you mount
on the side of a rack, you can make a dipole about as easy as a
vertical, there will be some detuning from the bike, but HT's are
fairly forgiving of SWR since they are designed for ducks.

Hi, Netters:

I recentely bought a multimedia PC and I am curious about
the floowing question.

usually shortwave broadcasting are very noisy, especially
listening to far or weak station. Are there any hardware or software
that take the output from shortwave radio (through audio output) and
perform "noise filtering" and "signal enhancing" process on PC and
send to PC's speaker? in that way, the audio quality can be improved without improving
antena system. Any pointer is appreciated.

Since I'm the one who posted the follow-up a few weeks ago that mentioned the term condenser to be quickly refuted by one responder and defended by another, it's time for my additional contribution of $0.02. A 60+ y-o nuclear physics professor with whom I work always uses the term condenser to describe a capacitor. The fact that the term did not appear in a particular publication x years ago does not make its use non-existant.

>
> (a) does anyone have a reference to research on 'memory' on Nicads? I've
> seen it described as an 'alleged memory effect'.

Modern Ni-Cads will not exhibit permanent "memory". A memory may develop after repeated, identical discharge cycles. "Memory" is often incorrectly blamed for low capacity when the problem is actually under charging or damage to the battery.

> (b) how far can/should you discharge Nicads? I've heard from one source
> that you should completely discharge Nicads to store them. I've heard

> switches the set off if the battery voltage for a six-cell pack falls
> below 4v or so - much less than 1V/cell.

1 v/cell (under load) is the guideline.

Cell reversal is the most common problem caused by over discharging Ni-Cads.

4 volts for low voltage disconnect is a bit low for a six cell battery. But there is another reason why the radio cuts off so low - If you use disposable batteries (like alkalines) you can run them down pretty darn low and take advantage of all you can get out of them - since you will throw them away when they are finished. The radio would would shut down before you "got your money's worth" out of your alkalines.

> (c) I've heard it said that discharging before charging is good, but the
> I've also heard from manufacturers that you get more cycles if you don't
> completely discharge.

You won't gain anything by completely discharging before charging. And just be sure to remember that a Ni-Cad is considered discharged when it drops to or below 1 volt per cell, under load.

> I'm building a charger, and I'm planning to discharge before charging.
> I'm going to use a comparator to switch from discharge to charge, and I
> need to know these things so that I can set it up right! There's a lot
> of things I've 'heard' and other things I've read in books, but I'm not

> sure what to rely on because there seem to be so many conflicts when you
> put it all together.

Unless you are planning to analyze the battery, I would not bother going through a discharge cycle every time you charge it - you won't gain anything. But if you are going to discharge a battery I wouldn't do it at a rate any higher than about 2 times the capacity. In other words don't discharge a 600 mAH battery at more than about 1.2 amps or it may overheat.

The guideline I use for testing a battery under a load is that the test load resistance should equal the battery's terminal voltage divided by it's capacity. For example a 7.2 volt, 600 mAH battery would be discharged across a 16 ohm load. This is simple ohms law formula that allows the battery to be tested for capacity in one hour. (Again - down to 1 volt per cell, under load.)

Regards

You sure are right. We have a 147.435 repeater in Portland, Oregon & it sorta acts as a magnet to keep all the hell raisers off the other repeater
(to preserve their status) & confine the trouble to one system. We are planning to put it on the internet with a CONTINOUS connection using a REAL AUDIO output. That way, anyone anywhere in the world can monitor the Portland 147.435 repeater with an internet connection & a sound card.

Wouldn't it be great if the 435 in LA could do that too, or even get on I-phone!!!!

I bought mine a couple of years ago; but don't really consider it to be a "low end rig". I wanted reasonalbly simple controls, a real S-meter instead of a bar graph, and other features that the TS-140s has. Many of the other rigs were too much like a calculater; way to many buttons and features I neither wanted or needed. Has a great general coverage receiver as well! I paid $900+ dollars new 2 years ago without a power supply. I have seen them used in the $600+ area with supply and would consider anything less rediculous! It would probably be a good mobile rig due to its size, but mine has never been mobile, is on my desk and will stay there. Hi..

1340. Info on calibrated antennas for measuring power density needed

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-21 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istE18r0J.A3@netcom.com>
Source record: 212345
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I'm looking for some information on how to make a calibrated antenna for signal strength measurements. A Cell/PCS company is installing a site on the building we live in with the antennas just 12 feet over the roof (and our apartment right below the roof...) and I want to be able to measure the field strength within the apartment once the system is operational. I'll be using a Tek 491 spectrum analyzer for these measurements, but I don't have a calibrated receive antenna to make the numbers meaningful.

Also, does anyone have any pointers to calculating near-field power density? They are claiming 100W ERP at 866 MHz.

Thanks for any assistance.
/mike

Cecil,

I don't believe that's always the case. As KD1HZ has pointed out his repeater is technically a private repeater and he has no basic objection to folks using his input/output frequencies for simplex. However this does cause a problem and is generally regarded as bad amateur practice.

Tony

Following up my own opus, I now note that Zworykin's role may have
been puffed by RCA PR (I was trained at RCA Camden, and most of my
historical info comes from company histories I picked up there).
Farnsworth's image dissector was basically the same thing as Zworykin's
iconoscope, and represented prior art (according to the patent office).
RCA wound up having to license Farnsworth patents, and that pretty
much says it all doesn't it?

why don't the closed or private repaeters just go to the 222mhz or the 900 mhz band or the 1.2 ghz band...2m and 440 are crowded as is now....
Use the bands before we lose anymore....

I have seen Ski Patrol personnel use a nylon harness rig that holds
their radios up on their chest, just below the chin. The radio is
held in place by velcro strips. The harness of course goes over the
sholders and crosses in the back so everything is secure. When they
want to talk they lower their mouth down and speak. The radio is
close enough so they can hear. Of course they have to use their hand
to press the PTT button. I would try to keep the radio somewhere on
you because of the vibration and jolting the radio would receive from
the frame of the bike. YOu are a better vibration dampener that the
bike.

I do not like the little bug speaker/mic that fits into your ear. I
have use some and it always seems it falls out or the wire going up to
it gets caught in clothing and is pulled out, or you move your head
and once again it is dislodged. If there is a headset/boom mic
arrangement, I think it would be better.

I am lead to believe that you need an external antenna on your bike
and the rubber duck would not reach out the way you wanted. I have

mounted a 1/4 mag mount on the bike rack that fits over the rear wheel. Coil up the excess coaxial cable and route the rest to the radio. Bad feature about this is, if you have the HT on you, then you are attached to the bike via the coaxial cable, and you must connect-disconnect the cable everytime you get on or off. The good feature is that your radio is not taking a beating from the vibrations of the bike. I know a 1/4 does not work on both freq. but it doesn't need a ground plane either. I have just operated on 2Meters only when I was doing it so I haven't explored dual band antennas that do not need ground planes.

Hope this gives you food for thought.

> My question is.. Is there a motorola radio that does (or can after some
> simple modification) transmit in the 90-100MHz Range?

Why do you need RF there? That happens to be right between the old low band
(which is for hams, 6 meters) and VHF high band (2 meters). Motorola radios
aren't designed for the FM broadcast band.

I'm not sure what your application is, but it is POSSIBLE to modify many radios
to transmit there, but if you want a broadcast transmitter a Motorola commercial
rig is way too much trouble to modify. Besides changing just about every resonant
circuit you will have to completely redo the modulator from narrow band to wideband.

If you want a pirate FM station this is definitely NOT the easy way to do it.

This is hilarious. I called Gettysburg today. Asked agent
"Annette" what the deal was. Couldn't tell me. Didn't know.
No one knows. It might be next YEAR before I get a vanity call; IF I
get one. Congratulations to those who did; you did so before the FCC
figured out they couldn't do it.

I can't imagine what is so difficult about data entry! You enter the
particulars, including callsigns. The computer (what computer they
HAVE) simply polls how many requests per call; lotteries the most
requests, grants the rest and spits it out on a laser printer. The
FCC HAD to have figured they would be deluged with requests; why
didn't they allow the people and resources to handle it? I know;
don't ask; it's the government. It's a recent throwback to waiting
nine weeks for a ticket!

I hope they're not as slow granting refunds...

Nonsense. Complete nonsense. This is not the way it is in Southern Cal
at all, at least not on 2 meters. I believe you will find that you get a very
large number of friendly conversations. I haven't heard anyone ignore, or
disparage, new technician-licensees in years.

440 in So. Cal. is largely closed repeaters that are seldom used.

I hope you enjoy your visit out here...

Chris,

It is not necessary that a mode be copyable in one's head for it to be valid and useful ... there are many of us who value the ability to design and build more efficent modem hardware and software than the ability to condition one's "wetware" to function as a (very crude) modem.

And it *is* fair and accurate to characterize copying (even very high speed) Morse code by ear as being a "very crude modem" ...the *very best* achieveable performance offered by a "wetware modem" is so dramatically inferior to the performance of even the most trivially simple hardware or hardware/software modems as to be laughable to those of us who practice the hardware/software arts. Advanced techniques easily yield performance several orders of magnitude better than wetware.

Note that I acknowledge that some find conditioning and operating the wetware modem to be an enjoyable pursuit ... that is not the issue of the code/no-code debate ... the only issue is the reasonableness, prudence, necessity, and validity of forcing *everyone* to condition their own wetware modems to some specified level of performance, even when they do NOT find it a pleasurable pursuit, in light of the present state of technology and the tremendous opportunity for advancement that is available through the use, pursuit, and expansion of that technological knowledge base.

Carl, you didn't say when you were listening to it. This practice
USUALLY restricts itself to late night weekend (and it doesn't usually
get THAT bad). However, sad to say, it is not unheard of these days.
If you want a quiet, well mannered repeater in the area, stick with
the DARA repeater, the Far Out repeater, or the Springfield repeaters
<G>. You can where my loyalties lie, can't you? Seriously though,
the KMC repeater has gotten the rep of being the rowdiest repeater in
the area (at least on weekend evenings).

Yeah, but having a coordinated closed/private repeater, you are basically claiming rights to TWO OPEN AMATEUR FREQUENCIES.

Part 97 states that NO amateur shall, in ANY way, OWN a frequency.

Plus, I heard that corrdinating bodies shouldn't, by FCC rules, be able to coordinate closed/private repeaters, if the majority of amateurs in the effected area oppose.

Don't quote me, I think the other ham mentioned this is listed in pr-docket 8522.

1358. Response to N7TDF's letter in Dec. QST

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-21 00:00:00 UTC
From: greg@netcom.com
Message-ID: <gregE17Cru.AyB@netcom.com>
Source record: 212433
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

In December, 1996, QST, N7TDF makes the classical 'private ownership' argument for closed repeaters. His arguments are, at best, fallacious, and at worst, patently self-serving. They also underline what is 'wrong with Amateur Radio Today.' We have ceased, en masse, to 'ask what we can do for amateur radio.'

>CLOSED REPEATERS ARE NOT THE PROBLEM

You are right, Mr Gamble. They are a symptom of the problem.

>I was compelled by Mr Irwin's letter ("Correspondence," Oct 1996) to offer an
>alternative viewpoint concerning closed repeater systems being "...contrary to
>the spirit of Part 97..... His views are not uncommon, but they display a
>basic lack of understanding of the effort required to maintain repeater
>systems.

And Mr. Gamble's views reflect a basic lack of understanding of the notion of over-riding public property and public interest which govern all public resources in this land of ours. Fortunately, most people understand that, even with a permit, you can't build a trail-shelter in a public park-land and then then hang out a 'members only' sign. No, if you choose to put an expensive structure up on public space, then you have to share it. Even if it was expensive. Asking for a donation is okay. Demanding is not.

>First and foremost, the "closed" in a closed repeater (or system) simply
>means that the owner of the repeater hardware chooses to limit theuse of his
>equipment to a particular group.

This is the standard argument, which tries to ignore that, on a crowded band, the *frequency* is the most valuable commodity. And the *frequency* is owned by the citizenry of the United States, not "The Grid Leak Repeater Group."

> These repeaters are, in almost all cases,
>operating on frequencies that are coordinated by a local council of amateurs.

Very good point. We need to develop (with the support of the Federal Government) standards of frequency coordination which assign (and de-assign) frequencies to those who will, with the fewest conditions, open them to the most amateurs. The 'support' is needed so that the selfish individuals who are given the choice of 'open the frequency or lose coordination in favor of someone who will' have little or no legal recourse.

>The repeater trustee does not hold title to the frequency pairs, but certainly
>does own the equipment. What many people fail to realize is the significant

>investment of time and money that repeater owners put into their systems.

Again, the same fallacy. Practically, the coordinated repeater holds the frequency. That now has the stregth of regulatory support and legal precedent. With that privilege comes resonsibility to share it.

Yes, repeaters are expensive, and yes people who use them should (of their own free will) support them. However control of the frequency is a privilege, and those who serve the most people at the lowest cost earn it.

>There is an attitude common among some amateurs that the cost of entry into
>our hobby stops with the purchase ofequipment-once we are licensed we should
>be able to have limitless access to all resources at our disposal. These are
>the folks who don't include return postage on QSL cards, gripe at a $2
>increase in the membership dues of their local (or national) radio club,

I don't think so. I think most hams will willingly help to the extent that they can.

I look at it sort of like organized religion. In a given denomination, you go to your local church on Sunday. Out of a sense of decency, you give your tithe (realizng that some don't or can't; still, you don't slam the door on them). When you're traveling, you find other church doors open to you, even if you haven't bought any of the bricks. And the place on the other side of town enjoys your company from time-to-time, without hitting you up for a bunch of bucks for the Building Fund.

Repeaters on high-demand bands ought to be that way.

>...and make good use of local repeater resources seemingly without interest in
>how they can make a contribution. This is a driving force behind many in
>the amateur community when they either create new closed repeaters or
>convert their existing systems from open to closed.

So, instead of slamming the door on these folks, why don't we try and make them feel part of the 'gang' to the extent that they feel like they want to contribute? Perhaps the reason people don't is that they feel alienated, like nobody wants them. Perhaps when they say 'NZ9XYZ monitoring' all the 1x2's who are listening fail to say 'hey there, what's up OM?'

I know that I, even with my 70's-vintage 2x3 call-sign, asked for the privilege of making a contribution to a local repeater/packet-node group, giving name, address, phone-number, etc., the system operator just ignored me. Guess I wasn't enough of an 'old boy.'

>Mr Irwin would probably be surprised at how many of these repeater owners
>would welcome the assistance (not just financial) of additional members to
>their "closed" group. I suggest that folks who feel this way find a
>local group and try contributing at least as much as they operate.

See the above. I remember when hams were really excited to meet a new ham in town. No more.

> If you
>are a regular user of a repeater, autopatch, or Remote base system, make
>a financial contribution whenever you can,

Gee. How does one become a 'regular user' if the machine is closed. And what about some hospitality to guests rolling by on the interstate? How does the new guy in towm meet people. Or the new ham? Don't they 'own' the pair in a given area as much as the guys who run the machine?

> I understand Mr Irwin's views
>because I personally know many amateurs who share them. I happen to disagree
>because I also know many hams who enjoy our hobby by building and
>maintaining FM repeater svstems. Some of them are extremely complex, with
>many thousands of square miles of coverage.

Great. Let the enjoyment be the payment. And let the enjoyment of the machine be the motivator for contribution. And let the repeater group understand that if they want a prime pair on a prime band, they probably don't get to say who can use the machine/frequency and who can't.

> The simple fact is that closed
>systems are not threats to our bands,

They are when they sit idle, or are used by four or five 'old boys,' to the exclusion of all other hams. And they are when, collectively, they consume all of 2m or 70cm, such that new hams or those with limited means or abilities have difficulty in finding spectrum space in which to enjoy the hobby.

> nor is the fact that some of our bands
>are crowded. I suggest that crowded bands are our best defense from attack by
>commercial interests. I further recommend that, if people like Mr Irwin are
>in areas in need of repeater spectrum,they look to unused bands like 1200 MHz
>and above. The bands that face the most serious threats are those that are
>silent. Remember 220 Mhz?-

I would suggest, instead, that those who are motivated to form closed communication systems be the ones to move up in frequency, to push the envelope. Knowing full well that they are paving the way for those who may, later, challenge their use of public frequencies and move them farther along. Exclusivity always, it seems, has a price.

The fact is that the commodity equipment, which is available to the majority of hams, is for 2 meters and 70 cm. Thus those bands, which are crowded, ought to be coordinated in the interest of making maximum spectrum unconditionally available to the majority of hams.

Although some hams have made a substantial investment in repeater equipment for those bands, and wish to run that equipment closed, their investment is of secondary consideration. Secondary to the consideration that no ham or group of hams owns a frequency to the extent that they are entitled to participate in limiting its availability to others. When a band fills up with closed repeaters, that is exactly what is happening.

And that is, no matter how you slice it, contrary to the spirit of the Amateur Radio Service.

As a service, if we are to survive, we must demonstrate the resolve to make the hard decisions about how we utilize our spectrum. We must behave in an 'open' fashion wherever humanly possible. Otherwise, we are a target for the argument that we are just using the public spectrum as our own private playground.

Here's one thing I want to point out.

Everywhere else in the country (besides Southern California), most repeaters are open. Hell, many autopatches are open.

In So. Cal. I think there are about 400 closed 440 repeaters and 15 open.

In most other places it is just the opposite! I was in Arizona recently, people there are much more friendly also, some offered to let me use the autopatch if I needed it and I didn't heard ONE jammer.

In Southern California 2meters has become like CB and 440 is just a joke. Another major problem is that SCRBBA and TASMA, AND the FCC don't do a damn thing. The coordinating bodies don't care and the FCC doesn't want anything to do with Ham Radio anymore. Hell, I just called the FCC and tried to automatically (via touch-tone phone) order a form 610 and in the list of forms, it wasn't even listed! I had to talk to a person.

Scott, KF6FCN

1366. Anyone using Atari ST for ham radio?

I have one of these home and it was collecting dust until a
few weeks ago when I passed my ham radio license and bought a used
Icom 735 transceiver from a co-worker. So far, I wrote a morse
keyboard software that interface to the printer port through an 7406
open-collector invertor and I'm still looking at other applications,
including control of my transceiver with the built-in ttl-level serial
port.

If anyone is interested in my morse software(I think it works pretty
good, and I'm not too fussy about providing source code) or has any
info to share, please send me an e-mail.

Source record: 212442
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.antenna

I commute to work/school every day on my bicycle and I've recently decided that I'd like to operate bicycle mobile. I already have a dual-band FM HT, but I'm interested in hearing from others about the best way to accomplish the rest of the setup.

* Naturally, I'd like to be able to operate with both hands on the handlebars at the same time. This means VOX. I know that one of the accessories designed to work with my rig (an Alinco DJ-580T) is a headset with VOX. There is also an earbud-mic accessory from Alinco that I think might work with my rig (and is $20 cheaper.) Assuming that I can choose from either one, which is preferable? What are people's opinions of the earbud-mic arrangement?

* What is the best way to secure my HT to the bicycle? Ideally, it should be easy to attach the radio to the bike and easy to remove it. Or is it easier to somehow attach it to myself or my backpack?

* I think a simple dual-band mobile-style antenna would probably be the best way to get out. My bicycle is a mountain-bike style and I can easily get a
rack to fit over my rear wheel. Is there a mobile antenna mount that would easily and securely attach itself to such a rack? Can anyone recommend a particular antenna/mount combination?

Anything else I should keep in mind?

It's a decent radio, at least the older ones were. Like you said don't expect it to be a Yaesu, but it is fine for what it is. Definately don't run it with the stock Mike. And see if you can find one used, there are lots of them out there. You might consider the 2600 instead... you can then do FM Repeaters, the 2510 can't without heavy Modifications. I think you'll like it.
I have had one in my truck for over a year and have made plenty of contacts and it has held up well so far to mobile environment.

Good Luck

Hi Chuck,
Well the story is still on going. Through scare tactics, they were able to force the owner of the mountain top site to ask that the repaeter be shut down. A new site was found, on a higher mountain which ironically enabled the repeater to be heard over a greater area. That really caused the new "claimed" owner problems. What was originally minor interference between the two repeaters, (which could have been resolved by the us of ctcss tones), turned out that the "suddenly appearing" repeater was being wiped out by the better signal being provided by the better location of the pre-existing repeater. The new "claimed" owner then put up a second box on the same freq on the same mountain top as the pre-existing repeater. They even PL'd it the same as the existing repeater. So for a while the two signal just beat against each other. Mean while the owner of the new repeater wrote down all the call signs of those who used the original repeater and sent out threatening letter to the call book addresses. The content of the letters gained the attention of the U.S. Postal Service. It seems they used the mail to send threatening letters,(OOPS). To the best of my knowledge, nothing came of the Postal Service investigation. As it stands now, Both systems are in operation. However the box they put up next to the original was removed. The "claimed" owner then starting "broadcasting in the blind" a recorded warning that use of the pre-existing was causing interference to his box and that continued use was in violation of FCC rules. Well that illegal one way broadcast was soon changed to a "QST QST QST" information transmission. While I still think its consider a one way broadcast, opinion are varied in light of the "QST" being added. The original repeater group has held their nets on monday nights for 2 1/2 years, so guess what---- The new owner suddenly began doing the same. Thats where it stands now.

Easy-peasy!

Heinrich Hertz?

His first ever experiments showed the presence of a signal by means of
a spark across the gap in his receiving ring. He certainly invented a
crude television receiver, though of the stupendously low resolution of
just 1 (one) pixel. In radio, vision came before sound...

I haven't done much of it myself, however I am a member of a local radio
club with many bicycle mobile operators.

It is my understanding that VOX works poorly due to wind noise. I have seen
some nice setups with a push to talk button on the handlebars near the grip,
a quick disconnect jack to plug in a headset mic. The headset mic can be
zip-tied to your helmet. (Definately wear a helmet... I have been very
glad I have had one on on a particular occasion.) Another alternative to the
headset mic is an aural mic. It is an earphone and a bone conduction mic
all in one. I have never actually seen one, but have had a feq qso's with
a bicycle mobile station using one. The fidelity is a bit lower, but there
is no windnoise or other outside sound interference.

>
> * What is the best way to secure my HT to the bicycle? Ideally, it

I have used an insulated beer can cover (often given away by radio stations
as promotions). I stuff the radio into that, and stuff the whole thing into
a waterbottle cage. It works great. Before that, I used to clip the radio
to my belt, and run a little piece of coax to the antenna. That was no good.
I hate feeling like I am wired up to my bike. It is a pain to disconnect every
time you want to get on or off the bike for any reason. For that reason, I
went with the waterbottle cage mounting method.

I have seen other nice setups with a
little nylon back holding the radio, a gell cell battery back, and bike tool
kit on the bike rack on the back.

>

> recommend a particular antenna/mount combination?

Most of the bicycle mobile stations I have seen use stainless steel homemade
J-pole antennas. THey are durable, easy to tune, cheap to make, and need
no ground plane. They put out a heck of a good signal into the local
repeater here, and on simplex. As for mounting, you should get the rack
for the back. A very small hole in the rack, or a small extention using
a sheet of steel or aluminum could be fashioned to fit the existing bolts
on the bottom of the rack so that you do not have to mod that.

I use a little piece of sheet metal (very crude) that I affixed to the rack
using the factory bolts. I have a mountain bike, and I did not want to drill
the lightweight aluminum (read expensive) rack. I currently have an nmo mount
on the sheet metal extention to which a 1/4 wave whip is mounted. The 1/4 wave
whip works, but not very well. The J-pole is much better.

>
> Anything else I should keep in mind?

Removability. I have seen J-pole's attached to air hose compressor
couples so that the antenna could be disconnected as easily as pulling
up on a ring, yet holds rigid even on bumpy terrain.

Keep it simple, with wires carefully put in places where they
won't get in the way. Keep it safe and securely mounted in some way.
Use bnc connectors for everything. On a bike
you don't need the hassle of adaptors and such.

Anyway, enough of my rambling. Good luck with the project.

Dan

You can also modify these radios to pick up the 12 meter band.

See http://www.qth.com/antenna for more info on this.

The FCC has already stated that, by definition, all amateur repeaters
are effectively "closed" repeaters.

>Can a human with receiver and BFO understand the signal (honest
>question)?

The first high power CW transmitters all used FSK modulation. That's because arc based CW transmitters couldn't be keyed on and off rapidly, arc stability had to be maintained or the signal degenerated to DW, IE spark, so OOK wasn't used. In the arc transmitter, a reactance was keyed across the resonant circuit to shift the frequency in response to the encoding (FSK is still done the same way today.) So in the early days of CW, decoding was generally done in wetware, and was done from a FSK modulated signal. Later, machine decoders were employed which allowed much higher transmission rates for FSK signals.

A modem/decoder is required, wetware or hardware, to demodulate and decode any text mode transmission, and OOK and FSK are examples of modulations used for text encodings. Traditionally, Morse has been the encodng used with OOK, and was also the encoding used for early FSK CW transmissions. That was mainly because there was already a large trained pool of telegraph operators familiar with Morse (and most of them already understood the code as a two tone signal, IE the click-clack of the telegraph sounder).

But that changed fairly rapidly in commercial service to other codes such as Murray/Baudot, whose uniform character allowed them to be decoded more easily and accurately in a gaussian noise environment than Morse (Morse was designed for the quiet wireline environment, and not for the noisy radio environment). These codes can be decoded in wetware too, as long as the data rate is held low enough.

The problem is that most Baudot transmissions today are at 60 WPM or 100 WPM because they usually employ a superior hardware decoder, and that's above the range where most wetware can cope. However, any operator who has been conditioned to handle 60 WPM Morse can be conditioned to handle 60 WPM Baudot. The characters are still unique sounds in either case, and the operator can be conditioned to respond to them in the same ways in either case.

However, the human wetware is approaching its limits at 60 WPM and above, and needs a very good SNR in order to decode the signals with a low error

rate. Even a simple machine FSK decoder can work at a lower SNR at 60 WPM than a human can, and can work easily at even higher rates where the wetware decoder fails completely.

Of course the rate can be slowed, allowing the human wetware to keep up more easily, and to work at lower required SNRs. At 5 to 20 WPM, the wetware does a good job of adaptive filtering and can work at quite low SNRs (about 10 db CNR for 20 WPM). But the rate can be slowed further, and the human wetware then loses coherence while the machine decoder continues to maintain coherence. This allows a very low rate machine decoder to work at CNRs a human can't match. For example, Lowfers use a technique where each code element is 100 seconds long. The decoder integrates this and can recover (error free) information when a human cannot even detect that a signal is present because the rate is below the human coherence speed threshold.

FSK demodulators can be very simple and still work very well. The old Hoff design, which uses surplus 88 mH telco loading coils in the mark and space filters, and a simple slicer (parts cost under $5), can work at 10 db CNR at 60 WPM. That's far better than an unaided human can do at 60 WPM (using either OOK Morse or FSK Baudot). And the Hoff design can work at faster speeds too, where the human can't. Of course even better hardware decoders are available, and use of FEC can make digital codes even more robust, but if push comes to shove there's still simple FSK equipment which works quite well and is very simple to understand.

As an educational tool, building FSK equipment, including machine decoding, is much more valuable than building OOK equipment with wetware decoding because the principles of operation of *all* the components of the FSK system can be fully and easily understood. The same can't be said for the wetware decoder. Our best neuroscientists still don't fully understand how that works. Having a "magic wetware box" in the system makes a full understanding of the system parameters and primciples much more confusing and difficult (and is the source of much myth and misinformation).

>operate a simple transmitter due to lack of knowledge.

Continous Waves are not yet outdated, we wouldn't want to return
to Damped Wave signals, IE spark. So lets keep CW, what we don't
need is a modulation technique and an encoding designed for a quiet
wireline environment on the noisy radio channel. There are at least
two separate issues here; modulation techniques, and the text encodings
which use those modulation methods.

There are basically two ways to impress intelligence on a simple
harmonic oscillator. 1) We can vary its amplitude, or 2) we can
vary its phase/frequency. AM and FM, those are our two basic
choices. OOK is an AM technique, and FSK is a FM technique. Of
the two, it is easier to get good performance with FSK than OOK
when all you have is a simple oscillator. That's because switching
an oscillator on and off is an unstable situation, and chirp and
irregular thermal drift are inevitable problems to be solved. With
FSK, the oscillator runs continuously at constant amplitude so
irregular drift problems are minimized, and rather than being a
flaw, controlled chirp *becomes* the modulation. (There's also the
little matter that FSK inherently has a 6 db SNR advantage over OOK
for signals with the same peak power, and for amateurs it is peak
power which is limited by regulation.)

Now there are literally an infinite number of encodings which
could be used to encode the text to be transmitted via either
OOK or FSK. These encodings can be subdivided into two broad
classes, uniform and irregular. Uniform codes have a substantial
advantage when forced to be decoded in the presence of noise.
That's because the position of the bit centers can be known
precisely a priori. The more we know about the characteristics
of a signal a priori, the easier it becomes to extract the
information it contains in the presence of channel impairments.
(This is an easily derived corrollary of Shannon's famous
information theorem.)

OTOH, irregular codes are poor performers in gaussian noise
because their spectrum isn't precisely predictable unless
you already know the information content they are transmitting,
at which point we would have to ask, what's the purpose of the

transmission if we already know what it will say? So for unknown message content, we need a code which allows us to use integrate and dump or other matched filtering techniques to maximize the Eb/No of the signal, and irregular codes like Morse don't let us do that. Even such simple uniform codes as Baudot *do* let us do that, however (and we can do much better than Baudot in code design for best performance on the impaired channel).

So, for the fellow with the simple oscillator, FSK offers several advantages over OOK, and a uniform code offers several advantages over an irregular one. Circuit complexity is essentially the same in either case, both key an element of the oscillator circuit in step with the encoding being used. And in both cases, *at low information rates*, uniform and irregular codes can both be interpreted by ear. In each case, every character has a unique sound, and the wetware modem can be conditioned to respond to either one. The uniform code applied via FSK modulation, however, can be interpreted at higher rates and lower SNRs than the irregular code and OOK modulation if machine decoding is used at the receiver on the other end instead of "by ear" decoding.

So while "by ear" performance at low information rates is a wash, the uniform code and FSK are upwardly compatible with better techniques while the irregular code and OOK are not. This makes the uniform code and FSK better pedagogical tools than OOK and an irregular code because the student can directly translate what he learns from them to superior modern techniques as he advances in his mastery of communications technique.

I can empathize with your concerns, but the fact remains that the FCC is not responsible for the actions of a carrier. There was no secret in the Commission's express requirement that all valid applications must be delivered no earlier than Monday, September 23rd. If you took a chance and filed pursuant to the "weekend filing rule," the application could not be delivered no earlier than 12:00:01 AM, Saturday Morning. If anyone had a concern about the time of delivery, they could also exercize their option to hand deliver the application in Pittsburgh. Why should the FCC rule otherwise for an unfortunate group of people who are now crying "sour grapes?" That's precisely why this program took so long to impliment. It took time to develop the filing rules so that they could be adhered to.

Got an issue? Take it up with your courier. Nevertheless, the notion that a recovery can be made for a premature delivery is ludicrous. The courier is under no obligation not to deliver your parcel earlier than expected. If your application was rejected because of an untimely filing, read and obey the rules, then file again.

Susan: 10 meters can be the most exciting band there is. It can also be pretty dull when at the bottom of the cylce, but it's pretty unpredictable. Sometimes it can be open worldwide in every direction and nobody knows it! I've been a ham for over 20 years, and 10 meters has always been my band of preference when it's open. You can operate from a mobile or base, use low power, and have a ball doing it. I have an old Midland CB that been converted to 10 meters, and I've worked the world while driving down the interstate.

I haven't been on lately, but I don't think conditions are particularly favorable. You might check http://www.arrl.org for band conditions and dx forcasts. I think I read that there will be openings into South America on a semi-regular basis. And make sure to join 10-10 International which promotes ten meters and has a jillion awards you can chase.

Good luck,
Sam W5SN

Sorry you had to meet him when you just wanted an answer, but Burt is
sorta the crabgrass on the lawn of Ham Radio. He says it's dead but
I suspect he just hasn't been keeping up on his geriatric medicine..
If it's dead, why does he keep hanging around the news and lists for it?

To your answer, 10 is not as good as it's going to get soon. As the
solar sunspot cycle increases, 10m (6m) will get better. As far as a
minimum
cost entry to 10m why not grab a radio shack 10m rig. If you can find
one
used, the cost should be reasonabel, but they weren't very expensive
even new.

When 10 is active you'll hear ham from every where, when it's dead,
give a short CQ and you will often be surprised. It can be easy one day
and a real challenge the next.

Good luck on 10m I may talk to you sometime soon. Have fun on 10
notwithstanding *anything* Burt says. coupla points lower on his IQ and
he'd be a plant anyway.

Your memory is incorrect (and your lines are far too long).

Bart Jahnke KB9NM, the ARRL VEC manager explained the lottery system in this newsgroup about one week prior to the Gate 2 filing date. He made it clear that all valid applications filed prior to the end of Day 1 would have equal ranking. I never saw any offer by the ARRL to hand deliver anything. I was in contact with a group who were planning a joint hand-delivery effort, and we scrapped these plans as a consequence of Bart's explanation of the FCC all allocation system.

This is pretty funny. This has got to be the first time I've ever
heard someone bitch about a quasi-government agency being too efficient!

> As far as I'm concerned, the FCC management is responsible.

As far as I'm concerned, you are responsible. If you wanted it there
the next day, you should have sent it Express Mail Saturday Delivery
or Fedex Saturday Delivery.

One reason I never get UPS Red Label out of HRO in NH is I know
all Zone 1 UPS deliveries are next day anyway. The same concept
applies to Priority Mail. Sometimes "2 day Priority Mail" gets
there in one day.

Michelle,

The question is, "How much $$$"? Someone suggested a coffee mug with friend's call sign. A baseball cap with same might be good. A little higher in cost would be an ARRL Callbook. That's a listing of all current United States hams. Maybe some other book, like the ARRL Handbook. That runs about $35 (I think), but is chock full of great stuff & any ham worth his morse code would enjoy that. Just some ideas. Rummage through online or paper catalogs to get more ideas. If you get an idea, bounce it off of us here. We are always good for an opinion. :)

>other info on creation of a coordinating body.

Another newbie unfamiliar with repeater coordinating bodies.

Repeater coordinating bodies are not "voted" upon. They are created by
fiat, when a group of people get together and decide to create one.

If you do not like SCRRBA's policies regarding repeater coordination,
visit an attorney, have him draw up a set of non-profit organization
incorporation papers, and create your own coordinating body. Then,
start issuing coordination certifications.

The FCC does not recognize repeater coordinating bodies. Thus, a
repeater coordinated with an alternative organization is just as
valid as one coordinated with SCRRBA. All repeater coordination
buys you is recognition when it comes to primary responsibility
to eliminate interference.

In short: rather than bitching and whining about the rules, learn
how to make the rules work to your advantage.

> Use the bands before we lose anymore....

Turn this question around. Why don't the people who want more open repeaters go to 220 and 1.2G? It's there - go use it.

Most of the closed systems I have dealt with in northern CA have been around for quite a while. Many were put up back when you almost had to use commercial gear because there weren't very many 440 rig from Japan. I have heard plenty of "good 'ol days" stories from 440 repeater owners about how 440 was where all the "private" systems got going because 2M was getting crowded. Then Yaecomwood started selling a lot of 440 stuff and, guess what, 440 got crowded huh.

Greg, your right. That is a great idea. I had already been monitoring pair just out of curiousity.

By the way, who elected SCRRBA the king? I have never seen any ballots or other info on creation of a coordinating body.

This topic has seemed to be kept alive for some time now, which indicates it is a serious problem. I for one would be for a movement to correct this situation. I think a coordinating body should not be made up of only repeater owners, as they do not represent all those who use the bands. Weak signal, SSB, EME and yes CW all need there needs met. All meeting should be open to all amateurs and not held behind closed doors as they are now.

I really would like to hear other thoughts on what and how a coordinating committee. I specifically used the word "committee" as it promotes participation by all, rather than a small "group".

If the FCC has indeed put the program on hold because of apps arriving
too soon, that is ludicrous.

Surely there has to be another reason. If not, get on with the
processing of apps.

The rules were clear on filing date, if someone's app came to soon,
then the app should be rejected - simple as that.

Build, ha! Many of us "appliance operators" are either too busy to build
or don't know one end of a soldering iron from the other.

Besides, OEM equipment always looks so much nicer.

>of a scarse public resource.

Indeed. I would only add that the cost of operating a repeater is the same for closed repeaters as it is for open ones. The potential for revenue gathering is really the issue. A club can certainly generate enough revenue to keep a repeater on the air, it then becomes simply a matter of choice rather than necessity whether or not it is open. A few closed repeaters on a band makes very little impact, but when almost an entire band is usurped by them, the practice of closing repeaters becomes less justifyable.

In my view, coordination bodies must actively pursue the issue of "sufficient activity" as a justification for continued coordination or else the credibility and the ability of such organizations to manage spectrum with due prudence should be called into question. Without responsible oversight, the practice of coordinating an entire band to closed repeaters can be likened to closing the State and National Parks for private parties.

Well, I won't say I was the first to recognize the 'delivery problem' but I was the guy who did the original post of 'Vanity Calamity'. I got my original application back, and I'm waiting for a day three call. The USPS did screw up, but that's water under the bridge. 15 of the 25 calls I picked have been issued. It would be pretty stupid for me to think that the FCC would rescind anybodies call, so that I could have my choice. Heck, as it turned out as 'a lottery' all we really did was buy a lottery ticket. If we expected to all win at the lottery, the prize would be pretty small. I hope the guys who have filed the petition come to the realization that they are pointlessly holding up the works. There are still about 6,000 vanity calls available. Pick another 25, and get with the program. Incidently, I met 3 of my 'picks' at the Fort Wayne Hamfest last weekend, I'm glad they got their calls.

Jim WD9AHF

By the way Gary, and Tom, your welcome.

Sorry fellows. I'm not an attorney either. 1 year to go.

I will say this: the number of wild and wacky court rulings is greatly
exaggerated in the public mind. These are the ones that get all the publicity.
They are usually set aside on appeal.

I quite agree. Essentially, the trustee of a repeater can be thought of as supplying his equipment for public use, with his payment being semi-exclusive use of the frequency pair (coordination). A closed repeater trustee is getting this use of the pair and is returning nothing to the public (i.e. the ham community.) This is not desireable. Nor is it supported by public policy imperatives.

Closed repeaters simply should not be coordinated, and coordinating bodies such as SCRBBA that take the opposite tack should not be suffered to be accepted as coordinators.

1423. Newbie Question Part II

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-22 00:00:00 UTC
From: pjameson@aits.com
Message-ID: <573evh$kpf@phoenix.nlci.com>
Source record: 212266

Hello,
I first want to thank the many who responded to my first post. The information I recieved was relevant and thorough. One post suggested I contact the Physics department here at Purdue, which I did. All my questions were answered, and I now have a better understanding of how the transmission of RF signals occurs.
I have a few more questions that extend deeper than I originally wanted to go, but the subject has excited me greatly. If we take a radio station for example and that radio station broadcasts at 98.7mhz. I would then tune my radio, adjust the capacitor until the frequency of the oscillator is as close as possible to incoming frequency. If this occured my radio would be able to interpret and project this frequency.
Now the questions. I know that a Modulator/Demodulator will change digital signals from the computer into analog signals capable of being sent over the PSTN. This is done most often through Quadrature Amplitude Modulation, Trellis Coded Modulation, etc. Basically using some form of either Phase Shift, Amplitude Shift, or Frequency shift to represent different states, 0,1. How does this relate to the activity occuring within a radio?

I know that I may be over extending my welcome here so I will just throw out a few questions:

How is digital transmission done through wireless communication?

Is there a common ratio for the Wattage needed to cover a certain area? E.G. X number of watts will cover Y number of miles.

I know that cable TV runs over coax, but I did not think that Cable is digital. Is cable a form of analog transmission?

Thanks again for your time, I am in the market for a good beginners book concerning this topic. If you could recommend one it would be greatly appreciated.

Thanks in advance,

Pete Jameson

That sounds reasonable, Fred. Your time, your money. Only problem with that line of thinking is you didn't put in on your frequency. You put it in the ham band. Next time you should consider a business band frequency.

But I know what you mean about the repeater crowd. Can't stand repeaters myself. But without investing any time or hard earned money (or depriving anyone else of using any ham frequencies) I solved that problem too. I just don't listen to any repeater frequencies, I listen to simplex.

The arguments in favor of closed repeaters always stress the expense involved in operating a repeater. Perhaps a distinction needs to be made between those closed repeaters operated by groups that any ham can join and those that generally refuse new members. The latter seems difficult to justify as a use of a scarse public resource.

1428. VANITY PGM DELAY - IS FCC RESPONSIBLE?

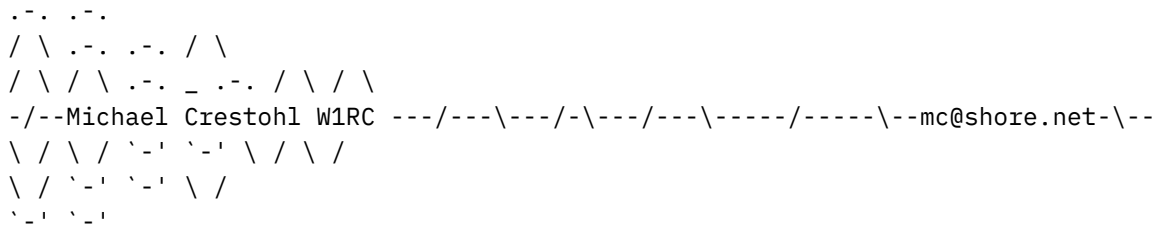
Newsgroup: rec.radio.amateur.misc
Date: 1996-11-22 00:00:00 UTC
From: mc@shore.net
Message-ID: <573pat$fqg@northshore.shore.net>
Source record: 212271

The whole matter of another delay is very puzzling! I sent my application in by Express Mail on Friday morning, waiving the delivery signature in full confidence that it would be delivered Saturday or Sunday - both cases sufficient to be included with Day One's processing. I made sure my 610-V was filled out correctly and legibly. My second choice was assigned and the request granted on 11-04 and I received my license in the mail on Friday. Pretty simple, right?

Now some guys are yelling that the carrier they chose delivered their apps too early and somehow expects the FCC to make some kind of allowance for it. And the FCC has put the program on hold again to decide how to handle it. I thing this is unfair to the poor guys waiting for them to clear up the backlog of Day One apps that require special attention and find out what their new calls will be. The reason they set up these kind of restrictions is to eliminate some of the apps so that the people who follow the instructions will get what they want. Its the same thing with the "Green Card" lotteries the State Department holds - the envelope has to be a certain size, address format must be correct, letter received between certain dates, etc or they are rejected. Its one way of reducing the numbers of applications for a fixed number of visas (or calls).

To the hams that trusted this carrier - I'm sorry you didn't trust Uncle Sam's post office to deliver your app to one of their own post boxes. In this case your carrier did their job faster than their promise and your appls were rejected because they arrived too soon. Your complaint is with the carrier - although I doubt if they will take you very seriously for bitching at them for delivering something TOO FAST! To expect the FCC to correct the carrier's doing at the expense of the Day 2 applicants is not really fair and why they put the program on hold is beyond me.

Good luck - hope you get something good when it's all over.



1429. FS. Portable Antenna Analyzer, 7 - 510MHz SWR direct

I have a portable Antenna Analyzer for sale.
It is a portable unit run from NiCad batteries with charger. It uses a LCD 4 digit frequency counter, an analogue SWR / %reflected power scales read direct.
No radio Tansmitter needed. It sees exactly what the radio sees.
Only R2200-00. Still under guarantee. Used only once.
Ideal for the antenna experimenter.

Call Rob @ +27 11 882-9182 (011) 882-9182
or Email rte@global.co.za

Sigh. Communications Quarterly is the magazine that was once
Ham Radio (the excellent technical amateur magazine long headed
by the late Jim Fisk). When Ham Radio was sold to Cowan (publisher
of CQ) they changed it from a monthly to a quarterly magazine. It
is the only thing with any technical content published by the CQ
empire. Surely you've heard of CQ? You know, it's the gaming
magazine for high power CBers who beep.

>The fact is, in today's amateur radio society, if it isn't packaged in
>an appliance, nobody will buy it. Period.

Nobody? Gee, I guess we should just close down the homebrew newsgroup since nobody builds anything. QST, QEX, the Handbook, and Communications Quarterly should stop publishing construction projects since nobody builds anything. I guess the thousands of GRAPES modems, and the tens of thousands of TNC2 kits shipped by TAPR, all went to nobodies too. Hamtronics, Ramsey, Down East Microwave, RadioKit, TecKit, Kanga, Far Circuits, etc must be out of business because nobody builds their stuff either.

It is true that there is a regrettably large number of amateurs who don't know which end of a soldering iron gets hot (or lately which end of a static hot air source gets hot). But they aren't everyone in amateur radio. There are still those who are following the charter goal of the service to self-train in the radio arts. There are still those who wish to learn radio technique, not for some test, but to further their own activities. There are still those who wish to push the amateur SOTA with ideas and methods new to amateur radio.

The appliance owners serve a useful purpose as test loads and random interference sources for those who still practice amateur radio. They generate the hostile conditions under which new circuits and systems can be tested.

And appliances *are* convienent. Even the most hardboiled homebrewer probably has some factory assembled bit of equipment in his station, if nothing else a DVM or oscilloscope. Likely he even has a factory assembled transceiver which serves as signal generator and narrowband spectrum monitor for his projects, and serves as a way to exchange ideas with other experimenters while his latest project is strewn in pieces on the bench. There's nothing wrong with owning or using an appliance. There

is something wrong with cluelessly owning only appliances while not having any idea how they work, however. That's the Family Radio Service, that's CB, that's GMRS, but it isn't the Amateur Radio Service.

>Hi
> Does anyone know how can I averiguate if my house's ground
>conection is effectively a true ground conection?

Is it connected to Earth? If so it is a true ground connection.
Now that probably doesn't mean much, but there it is. The more
relevant question is, what's the *impedance* of the connection
to Earth at frequencies where a connection to Earth might be
beneficial? (In some cases it is better to *avoid* an Earth
connection.)

To directly measure this impedance, we must measure *across* it at
two points. The practical problem we run into here is that one of
the points is the Earth itself. So we can't measure the impedance
of our connection to Earth unless we already have a good connection
to Earth of known impedance at the frequency of interest. It's Catch 22.

If we *assume* that Earth in a local area is homogenous, we can use
a bridge circuit to measure the impedance of our connection to it.
This works because the balance arms of the bridge don't have to be
of known value. They only have to be equal. We can arrange this by
use of physical symmetry. Then we have our unknown connection balanced
by a known variable impedance which we can adjust until the bridge
is in balance. We can then directly measure this adjustable impedance
and know that our unknown impedance is exactly the same.

This method is the one most commonly used for DC and low frequency,
IE powerline frequency, measurements of Earth connection quality.
If we try to extend it to HF, VHF, or UHF, however, we run into a
number of effects which make the measurement uncertain.

A good way to determine if we have a good HF Earth connection is
to erect an antenna which needs a counterpoise in such a fashion
that it will try to use the Earth as that counterpoise. A quarterwave
vertical is a good choice. We then feed it and measure the feedpoint
impedance. Now install a quarterwave counterpoise wire and measure the
feedpoint impedance again. From the known value of impedance of this
now balanced antenna, we can infer the impedance the Earth must be
presenting to our connection.

This method is fraught with uncertainties too, however, due to near
field effects. What we can infer is, if the feedpoint behavior is
similar with and without the counterpoise wire, we have a good enough
Earth connection at that frequency.

We can avoid this issue of Earth RF connections altogether, however, if we avoid using antennas which use Earth as the counterpoise. By using a balanced antenna (such as a dipole) fed in a balanced fashion, we avoid the necessity for an Earth connection completely.

We still need an *electrical safety* connection, however. The bridge method is sufficient to assure we have that. The National Electrical Code says our Earth connection at low frequencies should have an impedance of less than 25 ohms.

Protection from the effects of lightning strikes is another situation where we need an effective Earth connection and careful station layout. This subject is sufficiently complex, and requires a level of attention to detail, such that it needs to be treated separately. I have posted many times on the subject of lightning mitigation design. Consult an archive site for details.

The FCC is not responsible for those who tried to "fix" the delivery date hoping to get in before others. The FCC owes them nothing.

I can't believe the FCC is even considering delaying assigning calls to other folks . Is there something else going on?

Americans have become a bunch of cry babies. The cry babies tried to gain advantage and lost. End of story!

>reality of the law.
>
>Whats your opinion?

Carrying communications for hire is definitely illegal under the amateur regulations. So someone who hires out access to their repeater station to others for money is definitely violating the law.

However, club members, paying general club dues, have accquired a partial *ownership* right in the common property of the club, including any repeater station the club may operate. So members can use *their own property* for their own purposes. This is not communications for hire.

If the club charges a *separate* repeater access fee, however, and the repeater is not held as the common property of the paying group (I suspect this is the case for most non-club repeaters that charge for access, and for clubs who sell non-voting memberships), then they are conducting communications for hire, and are in violation.

The FCC doesn't seem much interested in enforcing this anymore, but during the 1970s some local clubs who tried charging a repeater access fee without also conveying a common ownership right to the equipment, IE non-voting memberships, were told to stop by the FCC Engineer in Charge of this district because it

constituted communications for hire.

This is the acid test. If paying a fee entitles you to formal voting right in deciding the disposition of the equipment, and a right to a share of any proceeds from such a sale, then you have a common ownership right and the fee doesn't constitute communications for hire. If, however, paying the fee does not give you a formal voting right or entitle you to a share of any proceeds from a possible sale of the equipment, then it is communications for hire, and is illegal under amateur regulations.

Hello
Over the past five years,I have sat back and let station tell lies about
me,and my activities on six metres.I do not want to get into a name calling
game,but I think it is time I gave a few fact,That is the truth.A few years
ago I reported GJ4ICD for bad behaviour on 50.110.In the UK GJ4ICD is very
well known.He has put it about that I spend all my time on 50.110.
This is a lie,the DTI have a list of the calls on 110 for 95 and 96.
In 95 the whole year was 11mins less than one minute a month.This year
in eleven months the time spent calling is 2.12min's.YES 12 sec a month.
Before I go any further,I agree with the dti on the band plan.
When I reported GJ4ICD it was for making comment that were not needed.
To me the words were PUSH OFF.I have asked the DTI if I was doing anything
wrong,they say,my working on six metres is OK.
The other morning,the band was noisy and I thought there could have been DX.
Not EU stations.This was eight O,clock in the morning.So I gave a call on
110.Back came a station,very weak.So I asked him to call again as I did not
get his call.As soon as I said he was week,up came a carrier.He was not DX
he was an SP9.So to be polite I gave him a report and said goodbye.I then put
his call in the cluster.A few minutes later the band still sounded good,so
I called again.As soon as I called the carrier came up,and only after I called
The next thing I was told to push off.So I asked the station his call,and was
told G3HBR.Two minute later G3HBR was in QSO with GJ4ICD on 130.
So I sent a letter to G3HBR as it was his call that was given.I said that
stations that act in this way are prats.Brian sent me a letter saying it was
not him.Since then I have sent BRIAN a letter say I take his word for it.
I will take the time now to apologise to him for any upset I might have caused.
I looked through my old logs and there IT was,the last station to say PUSH OFF
to me was GJ4ICD.I would like to think,if I had done somthing wrong.I would
have the guts to own up,and not let other take the blame.I would not try to
wind other station up by lieing.Now GJ4ICD makes a lot of play about Brian
being old,when I talk to someone I do not know there age.He say it is time
for respect.Respect does not come with age,or if you write in HRT.Respect
is somyhing you get by you behaviour.May I say that most off the DX's in
the UK are O.K. But there half a dozen that will goto any legths to word the
DX first.Alas most off these legnths are at the cost off other users,and not
in the rules.In the UK,if these stations work the DX first on or off 110,
then it is ok for other station to work them.Gj4ICD has worked,ES,OY,C31,ZA,
SV,TA,OX,since when have these stations not been in the EU.Stations that have
done the same,I am not getting at you.You do not preach that 110 is not for
EU work.What GJ4ICD want is that 110 is for listening only.Any station that
calls must be calling for EU stations.If he cannot hear DX nobody can.
The thing is do you want a band,where you have to ask before you call or
tell stations like GJ4ICD why you are calling.I have said if he asks what I
can hear I will tell him.If he says he can hear DX,I will then qsy or just

sit silent.The problem with this he then hear stations that are not there.
I have lost count of stations that he has told that there is a dx station,
and no-one ever works them.Or hears them.
Just for the record
I always listen before I call
I always ask three times if the freqency is clear on all the band.
I spend as little time a posible on 110 and then qsy
I do not get involved in arguments on the radio
I do not jam the band
I do not make comments
And when talking to stations of any country,I am polite.
You might ask why.I know that stations like GJ4ICD will use every little
excuse to have a go.Unlike GJ4ICD I am not going to call stations that
have a different point of view names.I live in a democracy where every
person is allowed a view,as long as it is not at the cost to other rights.
TO uk stations PLEASE listen to me on the band,and make your own minds
up.Not to this bitter station that is acting in this way as he cannot get his
own way.If GJ4ICD wants to listen that is his right.If I think there is DX
and want to call then that is my right.The same stations that say you should
not call on 110 two weeks ago spent 2.5 hrs calling on 110,as we could hear
the v51 beacon.Calling over each other,calling over the V51 in QSO.
I HATE HYPOCRITES

I checked the WM7D call server this morning and what did I see to my
suprise? Yes. Chalk up 2 more Vanity Club calls to the Tuckers.

K6ANT to Roy Tucker
WX6XXX to Kathryn K. Tucker

I think this brings their FCC donations to $990.00 to date.

>for 2 1/2 years until the coordinating group found out. Then guess what,
>Suddenly after 2 1/2 years its "true owner" wanted to reclaim his
>"property". Maybe we all sould pick a private "paper" freq pair and

It sounds to me like this is the opportunity for a concerted effort (i.e.,
a monitoring project).

It probably would actually take less funds (at least in technical material)
to profile the use off each and every 'coordinated' pair in SoCal over
a period of time (some months).

Then:

a) present to the coordinating body those frequencies
which have been untouched in months and should be
'freed up'
b) when they refuse, publically publish the results,
including the frequency 'owner of record' usage
profile, and the refusal of the coordinators to
free up the resource
c) use the study to abolish the present frequency
coordination body and insert the framers of the
study in their place. After all, anyone with the
wherewithal to produce 90 days of accurate utilization
data has shown themselves to be capable of doing the
job using sound management techniques.

On top of it all, wouldn't it be an interesting technical challenge, to
develop an easily-duplicated band-utilization profiling setup? And
wouldn't it be a tremendous contribution to the hobby?

>send to PC's speaker? in that way, the audio quality can be improved without improving
antena system. Any pointer is appreciated.

Until very recently, PCs didn't have the processing speed to handle
realtime digital signal processing of weak noisy signals. So special
dedicated DSP chips were used instead in external standalone boxes.
There are a number of such boxes on the market. Some of them are quite
good at denoising an analog voice signal, and all of them are good
at removing hetrodynes and other undesired artifacts.

There are a few programs for higher end PCs which do a good job
on narrowband data signals, but I'm not aware of any for analog
voice use yet. Denoising the complex speech waveform is still a
computationally intense task.

>definition from my book that states "Hz or Hertz is a measure of radio
>frequencies in cycles per second." This does not really clear up a Hz
>cycle for me, do you know of another more descriptive definition?
>What consitutes a cycle?

Any electrical signal other than DC has a time varying amplitude.
For a signal of constant frequency the variation is cyclic, IE the
pattern of amplitude variations repeats over and over for as long as
the signal is present. Any periodic variation can be decomposed into
a combination of sinewaves. For a pure tone, the signal is just
a single sinewave pattern at the fundamental frequency.

It is convientent to express frequency in terms of radians so
that w = F/(2*pi). And it is useful to use the cosine rather
than the sine function to describe the wave (the cosine has
the same shape as the sine, but is displaced pi/2 in time).
So the amplitude of a sinewave signal over time is y = cos(w*t).

If you plot that function with the Y axis being amplitude and the
X axis being time, you'll find the wave crosses zero twice in
completing a single instance of the repeating pattern. So a cycle
is just the time from one zero crossing to the second following
zero crossing.

The reciprocal of this cycle time is the frequency in Hz, IE
frequency = 1/cycle_duration. From this you can conclude that
a high frequency has a very short cycle duration and vice versa.
Because radio waves travel at a fixed speed (the speed of light
in the medium through which they are travelling), we can also
conclude that the wavelength of one cycle is L = c/F where L
is the wavelength and F is the frequency, and c is the speed
of light in the medium. With frequency in units of Megahertz
and c = 300 Megameters per second, the wavelength is in units
of meters.

>I am getting ahead of myself here, I have always equated frequency
>with pitch. A higher frequency has a higher pitch, and a low
>frequency has a lower pitch. Is this a correct assumption? If so I
>would apply a frequency at 900 Mghz as being a lower pitch than a
>frequency of 928Mghz. Is this a correct assumption?

Pitch is a term used for sound frequency. Sound waves are compression
waves in a medium. Radio waves are transverse electric and magnetic

fields in free space. The mechanisms of generation and propagation are very different. However, the analogy between sound pitch and radio frequency does hold. A higher frequency is a higher pitch and vice versa.

>The following is my overall description of how RF work, any comments >would be greatly appreciated. A device makes a noise at a certain >pitch (frequency) which is sent out over some distance where another >device must be able to 'hear' the same pitch for the frequency to be >understood.

That's a crude analogy, but is essentially a correct picture. The method by which pitches are discriminated is called resonance. A device which resonates at a certain frequency (pitch) will respond to signals passing by which are of that frequency, but will respond much less strongly to signals of a different pitch. This is the basic mechanism of *selectivity* which allows different signals to be tuned. This happens with sound and with radio waves.

A sound example would be if you started a crystal goblet to ringing by stroking its rim. A nearby goblet of identical construction would begin to vibrate in sympathy with the first one in response to the sound waves passing by. If you tune the pitch of the first goblet by adding some water to it, you'll have to also tune the second one with a similar amount of water to get it to regain its sympathic vibrations in response to the waves being generated by the first goblet. It is the same with radio waves, but the waves are propagated differently, and the exact mechanism that supports resonance is physically different.

Resonance in electrical circuits is a function of two electrical characteristics called inductance and capacitance. Inductance and capacitance are physical properties of materials which are influenced by physical shape and other factors such as permeability and permitivity. A combination of inductance and capacitance is called a resonant circuit, and such circuits can be lumped or linear. The distinction between lumped and linear is related to wavelength. A lumped circuit has elements which are physically small in relation to a wavelength at the resonant frequency while linear circuits have physical dimensions which are large in relation to a wavelength. The latter *radiate* RF, and respond very well to RF radiations passing by, while lumped circuits do not (the reason for that is covered in Maxwell's Equations, which are definitely beyond the scope of this article). Such linear circuits are generally called *antennas*. Since radiation is necessary to convey RF influence to a distant location, antennas are necessary for RF communications.

The lumped elements generally do not respond to radiation fields, but do respond to signals conducted to them by wires. They are used to *tune* the equipment attached to the antenna to further improve the discrimination of the equipment to a given frequency. A cascade of tuned circuits offer greater selectivity than a single tuned circuit. So radio systems are tuned (grossly) by antenna size and shape, and much more discriminatingly by adjustments to lumped inductances and capacitances inside the radio.

>Texas.

I disagree. It should be forbidden by PRACTICE! It shouldn't take a law to get hams to treat each other cordially, on the simple basis of having the hobby in common.

It's ironic: at the very time when racism was such a problem in this country, we hams treated each other (on average) far more kindly and equally than we do now.

And it isn't a problem of crowding; there were more of us active then!

I remember, when studying for and first getting my ticket in the 70's, how kindly and generously I was treated by each and every ham I encountered. That was on 20 meters, on repeaters, at club meetings, everywhere.

I dunno. Maybe it's generational. Most of the gents who elmered me had done time in the Service, often as not getting shot at. Never been much of one for the military life, but perhaps the guys from WWII through Viet-Nam had some experiences which taught them about unconditional camaradarie.

An interesting post. The question is, without wetware, what good is any of it? Kind of hard to read the printout of a RTTY contact, or understand the language during a phone QSO, without using the old noodle "wetware." So while the machine may do the front-end work, the old wetware does the real work downstream. When I copy Morse, it goes directly to the "wetware" without any step in between. The human brain, incidentally, is an excellent signal processor. An experienced CW op can copy 100% even if every dit or dat cannot be heard, by "filling in the blanks" from context. We do it all the time. Using this method, I can copy signals that are down in the noise, or are in heavy QRM. If neuroscientists did understand our wetware, maybe they could build a computer that could approach its capability.

I was disappointed to hear you refer to those of us who use CW as "high power CBers who beep" in another post. I'm afraid Carl is dragging you down to his level, when I hear you taking such cheap shots.

I don't know. I know a machine decoder can certainly do a better job with FSK than with OOK (6 db better). I don't know if the human ability to discriminate between two tones in noise is better than the ability to discriminate between the presence and absence of a single tone in noise. That's a physiological question that could best be answered by a research audiologist, IE can the brain maintain and slice the output of two adaptive filters at the same time?

I think some people can. Those with perfect pitch seem to be naturals at this sort of thing. BTW, I just read that perfect pitch is an inherited trait, and is more than 10 times as likely to appear in a family which has a history of having it than in a family which doesn't. Training can enhance the utility of the trait in those who have it, but training can't induce it in those who do not. The same (to a lesser extent) with "natural rhythm", some of us have a little metronome ticking in our heads, others don't. Perfect pitch does run in my family, and I have it to a pretty fair degree, but my little metronome seems rusted. I can always tell when someone is off key, but hardly ever can detect when they are off tempo.

>Also, I wonder what the minimum practical frequency difference would
>need to be (say 200Hz on a 500Hz tone, for example). I guess one would
>try to set the beat frequency as low as possible so as to maximise the

>minimise the frequency shift when transmitting, so as to use less
>bandwidth.

Well, I think you'd want the beat somewhere in the range of maximum auditory sensitivity, IE 500-1000 Hz. I don't know what shift would be best. You don't want the two frequencies to be harmonically related for obvious reasons. There may be some "magic numbers", like in the musical scale, which are better than others. This is where a music theory major might be of some use.

>This seems like an interesting angle on Morse. I like the idea as it is
>still a minimalist approach that potentially uses little bandwidth. I
>guess the biggest question is how easy is it to learn to understand FSK
>compared to OOK? Also, is it easier or more difficult to pull out a
>signal if there's a pileup?

I can tell you that FSK stands out to my ear when I hear it compared to a single tone. The frequency transitions are real attention getters in a way that merely varying tone amplitude is not. European police have taken advantage of this with their sirens for years. I haven't tried listening to FSK at a 10-20 WPM rate, however, and don't know what advantage or disadvantage it might offer at rates where most people could decode it by ear. The OTs who used it in the arc transmitter days didn't seem to have any trouble copying it, however.

FSK has a different sound pattern than OOK, so I'd expect the learning curve to be about as long and steep for it as for OOK. So a short trial probably wouldn't be a fair one. You should probably expect to take as long getting good at copying it as you would copying OOK.

This would be a really simple experiment to perform. Most rigs have the ability to do FSK, or can readily be modified to do it. A group of amateurs could start a manual FSK net and work at it long enough to see if it has merit vis OOK. We have definite proof it works better with machine decoders, it would be interesting to see if it is also better with a wetware decoder.

You might even want to try a hybrid technique, with one tone for dots, another for dashes, keyed OOK. I could see a big advantage for that among people who have trouble recognizing differences in tone durations (like me), but who have fine pitch discrimination. (I don't see any advantage to that for machine use, but it might be useful for people.)

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4
months.
think about it. You see those 'Make.Money.Fast' posts more and more.
That's ... because it WORKS ! So I thought, all those new users might
make it work. And I decided to try it out, a few months ago. Besides,
whats $5.00, I spend more than that in the morning on my way to work
on coffee and cigs for the day. So I sent in my money and posted.
Everyone was calling it a scam, but there are SO many new users from
AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I
couldn't
believe it! Not just a little, I mean big bucks! At first only a few
hundred dollars, then a week later, a couple of thousand, then BOOM.
By
the end of the fourth week, I had recieved nearly $47,000.00. It came
from all over the world. And every bit of it perfectly legal and on
the
up and up. I've been able to pay off all my bills and still had enough
left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well.
Markus
Valppu says he made $57,883 in four weeks. Dave Manning claims he made
$53,664 in the same amount of time. Dan Shepstone says it was only
$17,000 for him. Do I know these folks? No, but when I read how they
say they did it, it made sense to me. Enough sense that I'm taking a
similar chance with $5 of my own bucks. Not a big chance, I admit--but
one with incredible potential, because $5 is all anyone ever invests
in
this system. Period. That's all Markus, Dave, or Dan invested, yet
their $5 netted them tens of thousands of dollars each, in a safe,
legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces
of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST."
(In
this way, you're not just sending a dollar to someone; you're paying
for
a legitimate service.) Fold a $1 bill, money order, or bank note inside

each paper, and mail them by standard U. S. Mail to the following five addresses:

1- Natalie Jansen
Lancveldlaan 18
5671 CN Nuenen
Holland

2- Chad Collier
2785 Cold Springs Rd. #49
Placerville, CA 95667

3- Steve Boltinghouse
1009 Bird St.
Hannibal, MO 63401

4- Jeremy Bero
2021 M SW
Miami, OK 74354

5- Jeffrey L. Shell
P.O. Box 1114
Johnson City, TN. 37605
STEP 2.

Now remove the top name from the list, and move the other names up.This way, #5 becomes #4 and so on. Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at least 19000 newsgroups at any given moment in time. Try posting to as many newsgroups as you can. Remember the more groups you post to, the more people will see your article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing returns within 7 to 14 days! Remember, the Internet is new and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses. Yes, thats right,only 5. You make $5.00 in cash, not checks or money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250 additional postings with your name at #4, 1000 postings. On average then, 50 people will send you $1.00 with your name at #4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your name at #3 or 10,000 postings. Average return, 500 people= $500. They make 250 postings each with your name at #2= 100,000 postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at #1 and you get a return of $60,000 before your name drops off the list.And that's only if everyone down the line makes only 250 postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list, you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through and repost this article everywhere you can think of. The more postings you make, the more cash ends up in your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it works. There are millions of people surfing the net every day, all day, all over the world. And 100,000 new people get on the net every day. You know that, you've seen the stories in the paper. So, my friend, read and follow the simple instructions and play fair. Thats the key, and thats all there is to it. Print this out right now so you can refer back to this article easily. Try to keep an eye on all the postings you made to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the bucks to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months). Then he sent the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

1456. 800mhz on a TH79

Newsgroup: rec.radio.amateur.misc

>
> It's great that you got your call. I got hosed by an overzealous USPS and that
shoots down your express delivery comment. I was (un)fortunate to realize what

happened and immediately (day three) electronically filed. So, I'm in the queue. As far as I'm concerned, the FCC management is responsible. First of all, there was no mention of a 'lottery' until they got inundated on Monday morning. If it was going to be a lottery, then all the inordinate methods of getting your app in, would have been a dead issue. If you recall, there were the W5YI, ARRL, and others who were going to 'hand deliver' the apps. If the FCC would have stepped up to the issue and said how it was going to delve out the calls. Fed Ex and the USPS would have lost some bucks, HAMS would have saved some. Next point, Mellon Bank, a contractor paid by the FCC was made directly responsible for accepting, opening, and cashing the checks. It would have been a nit to either have the words 'GATE 2 VANITY CALL' required on the envelopes, or have the the Gate 2 apps sent to a different PO BOX number. Clearly, a screw up in the input process. Who owned it? FCC is the owner of the process. God knows what the address scheme was on those envelopes (if you recall).
Next point, while all the confusion was going on about the 'lottery', the telephone answerers had no direction on what to say, so there were mixed comments coming out of 'the FCC'.

My personal episode was with the USPS. They sent a formal letter to the FCC, stating that they had 'errantly delivered the letter contrary to the instructions' (one individual in particular) and was told that 'they aren't bending the rules' for anybody. That's when I hopped on the electronic app. Right now, it's 2 months since this process started, I still don't know if I have a 'valid application' on file. If you don't think the FCC was asleep at the switch. I can't respond. I'd like to see what the 'actual computer problem was'. My guess, they blew out the index extents on their data base, and toasted the system. I'd bet some cash, that there was no hardware that caused the 'bug'

Still, I think that the multiple call abusers need to be dealt with swiftly, and sternly.

Gary, tell more about the history (rumors / reality) of the good ol' days back at RCA -- the more varied the perspectives the better the views.

BTW, I agree with your earlier comparison of the iconoscope to film: Farnsworth's image dissector measures the *instantaneous* photoemission of the pixel being interrogated, like that of a photomultiplier tube imaging a single point on a scene. Zworykin's iconoscope had a target which *integrated* the light falling on a cesium-doped silver globule. The "Ike" had a whole thirtieth of a second to store up a goodly number of photo-electrons. When the raster deflected e-beam interrogated Zworykin's target the signal produced was enormous by comparison.

Keeping in mind that this was the 1930s and the Ike produced a signal of nearly a micro-amp, that gave RCA a big advantage in circuit simplicity, S/N ratio, etc.

(My apologies if this thread seems as if it is crawling too far astray -- continuation on a TV group would be OK by me.)

Michelle,
See if you can find a amateur radio oriented store Like Ham Radio
Outlet, or find a copy of 73 or QST magazine. There are lots of ads for
various
things suitable as gifts most at reasonable prices. Some things come to
mind like coffee cups with the ham call sign on them, 24 hour clocks or
some of the dual digital ones, desk name plates with the call sign on
them, perhaps a book on the history of ham radio or some aspect of ham
radio. 73 magazine in particular has a *large* section devoted to all
types of ham radio reading material.
If you want or need to , drop me an email and I'll try to locat the
nearest HRO for you, or check their home page www.hamradio.com
Good luck

You could use it to make difficult signals easier to copy, remove
heterodynes, etc. Like the Watkins-Johnson dsp only cheaper.

> concensus was. Thanks.
>
> SusanWhen I first got started in Amateur radio, I started with a little
radio shack 10M rig. I put up a little home made antenna that I
had built out of the diagrams in the exam preparation books. I had
an unbelievable amount of fun with that rig.

My first contact was from California to Missouri, and I didn't know
what I was doing. Within the same week I was talking to Japan,
New Zealand, Australia, and States across the country. It was
hard to believe. I was making contacts from across the globe,
all on a used 25 watt ten meter rig with an antenna I had built
myself. I didn't even have the antenna up very high... I just strung
it up over the television antenna here.

Now that I have hinted towards the wonderful things about ten meters,
you may want to read about the 11 year cycle, and propagation. I don't
know what ten meters is like right now because I haven't been on HF in
a while. You may find ten meters dead for a few days at a time. I never
found ten meters to be any good at night, except when conditions were
really good.

I think it is a neat band. When it opens up, there is a lot of fun
to be had.

Anyway,

gotta go,

Dan KD6FPX
Downey, CA

You could try a simle clip microphone/spkr HT to your collar instead,
>
> * What is the best way to secure my HT to the bicycle?
Don't bother. Clip it to your belt or put it in your pack.

> Is there a mobile antenna mount that
> would easily and securely attach itself to such a rack?

get yourself a HT 5/8 whip and mount it to a BNC clip on system found in
most radio catalogs.

Just one more input for you mobile interests. I have two HT's. The Icom w2a and the v21at. this gives me 2m, 220, and 440 to deal with and have fun with. I bought a Comet CX-224 tri-band mobile antenna and mounted it through a hole in my bike rack,. I then ran the co-ax to the gooseneck of the handlebars so I can always see the wire in front of me. I currently am looking for an adequate supply to run a dual-band mobile rig to this antenna for longer rides but that will have to wait until next summer.73

Having a coordinated private repeater doesn't mean I claim any
right to a frequency pair.

In fact, I don't mind if another ham puts up a machine on a repeater
pair I'm using unless they cause my machine harmful interference. If
that is the case, then they have the primary responsibility to resolve
the problem.

> 73 MIke

97.3[20] defines coordinating bodies as those generally recognized
by the amateurs eligible to erect auxiliary or repeater stations
in the area over which the body claims jurisdiction. 97.205[a]
defines those amateurs eligible to erect repeater stations as
every amateur holding a Technician or higher class license.

I would interpret "generally" to mean a simple majority. So
it would seem that if a coordination body can't withstand a
plebiscite on their policies, they would lose the necessary
recognition from the amateur community they claim to serve
to validate their coordinations, IE their coordinations
would become null and void.

Note that 97.3[20] defines frequency coordinators only in
regard to auxiliary and repeater stations. Weak signal,
EME, SSB, CW, packet, etc, are outside their authorized
purview. That sort of bandplanning would fall to a spectrum
management group (it *could* be the same group if it is so
chartered).

>

Bill,

3894.5 Khz has been a sort of "no-man's land" of amateur radio for a long time. The no-code argument really has no weight as far as this frequency because it's been like this for AT LEAST 15 years! This was long before no-code tech licenses were even a glimmer in the eye of the FCC.

My HF gear has been in the attic for about a year due to shack renovation, and spending too much time on the computer, but from what I've heard and read, this frequency, along with 14.313 hasn't really improved. A few hams (namely the ringleader, WB2OTK) were fined by the FCC, but not much of any other attempt has been made to clean things up.

I have an idea for a circuit that could need a bit of development:
I have noticed that very low power op amps such as the Maxim 406 change their bias offset if the input pins pick up very low levels of RF, this caused me a problem at 418MHz. Could be a basis for a very low power drain TRF or rf detector.

using the new iphone 4.5 program from vocaltec it is possible to have
a full duplex audio and full colour qso.the program is very easy to
use.
you can down load the prgram from
http://vocaltec.com/iphone4/video_dnld.htm
you donot have to have a camera just to view the 'live' pictures of
others.
you can qso 'hams' or anyone else who is on.
if you want more information on how to use the program just e-mail me
you can use a 'quickcam' camera which plugs into the printer port and
you donot need a video card.
you can also use it for voice qso's via the american 2m/70cm repeaters
'live'.

>
> get yourself a HT 5/8 whip and mount it to a BNC clip on system found in
> most radio catalogs.An article in QST describes a a 2m j-pole attached to a bicycle safety flag
fiberglass mast. It has all the gain you can ask for and is almost
indestructable. It only costs the $5 or so $$ for the flag, some coax,
TV twinlead, and a connector. I used 75 ohm stranded coax for the most
flexibility but it is difficult to attach to a twist-on connector. Since
my first attempt had an SWR below 1.8:1, I didn't try to improve anything.
Using clear twinlead and white tywraps on the white fiberglass makes for a
very unobtrusive antenna -- Except for the coax leading to the HT when in
use, it looks just like any other bike flag. Have Fun!

1481. Twilight of amatuer radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-23 00:00:00 UTC
From: "Matthew A. Erickson" <kk5dr@io.com>
Message-ID: <32972874.421B@io.com>
Source record: 212070

Are we witnessing the "twilight of amatuer radio" ? Is amatuer radio slowly dieing from its "bloated" buracrecy, poor operators, and choking on it's own excesses ?

I see a tangable & difinite trend towards a lack luster, "sub-standard", absence of collective purpose, in it today, and noticable over the last 10 yrs.

Todays "on-the-air" amatuer radio public image, is tarnished, to say the least. Very few amatuers perform public service, or regular public image polishing. Most amatuers occupy their on air time with useless idle chatter, or even bad operation & manners. What does the public think, when listening to this type of "counter produtive" activity ?

The only way amatuers can "justifiy" our claim to spectrum, is to make the public want us to stay on them, and continue to serve it. We must prove we can serve the publics best interest, not just by siting deeds of the past, but by "Doing it now", serve the public in any way we can with amatuer radios powerful communications network, prove NOW, that we can provide communications "free of charge", anytime, anywhere, in any conditions. Public service is the key to amatuer radios very survival, if we can not change the current public image of amatuer radio, from unruly, self-centered, self-absorbed, self-serving, CB-ish, chatter-boxes, to that of generous, public servents, with the betterment of the WHOLE of amatuer radios best interest allways in mind. Then amatuer radio will surly die from our own excesses.

I have only been in amatuer radio for a relitivly short time (10yrs.), but don't want to see it go the way that CB did when I left it in 1979. CB, is now a totally useless band, in utter chaos. Please don't let this happen to amatuer radios bands too.

Deregulation of amatuer radio is coming, it's not a question of IF, but when. Will the amatuer bands turn into another CB ? "A free socitiy, without self-disipline will collapse under it's own excesses."

I am sad that I may be persent to witness the end of amatuer radio as we know it. Will it go out with a fight of epic span, or simply "wint-out", with a wimper ?

The only answer I can see, is that of improved public image, public service, and justification of our own exsitence.

[1006]

Newsline report number 1006 for release on Friday, November 22, 1996 to follow.

(*****
The following is a QST

Big upsets in the fall ARRL elections, Gate 2 of the Vanity call sign program goes on hold and a proposal for the reallocation of the 2.3 Gigahertz band. These stories and more on Newsline report number 1006 coming your way right now!

(*****
ARRL ELECTION UPSET

Some major upsets in this years ARRL Divisional Elections with two incumbent directors unseated.

We go first to New England in the Northeast Division. There, former Director and former ARRL Vice President Tom Frenaye, K1KI, has ousted Bill Burden, WB1BRE. It was Frenaye with 2705 votes and Burden with 1523.

Frenaye served as a Director until he was elected as an ARRL Vice President several years ago. When he failed to be re-elected last January, he took to the campaign trail to get his old Directors seat back. The ARRL members of the New England Division agreed, dumping Burden in favor of returning Frenaye to the ARRL Board.

An even bigger surprise took place in the Hudson Division where Frank Fallon, N2FF with his 2168 votes took out Director Richard Sandell, WK6R, who garnered only 1680.

Sandell was appointed vice director a year ago after then Hudson Division Director Steve Mendelsohn, formerly WA2DHF and now W2ML, was elected as 1st Vice President and Vice Director Paul Vydarney, WB2VUK stepped into the Directors seat. When Vydarney decided to resign, Sandell was automatically elevated to replace him.

But Sandell appears to have been no match for the popular N2FF. Fallon is very well known for his activist work in the area of protecting the

rights of Hudson Division hams to install towers and antennas. He is the founder of RADIO, the Radio Amateurs Defense and Information Organization Inc. RADIO acted as a legal defense fund in a precedent setting Long Island, New York tower case won after a long battle down by a local ham. When the votes for the director were counted, it was Fallon 2168, Sandell 1680.

Not unexpected was the re-election of Southwestern division Director Fried Heyn, WA6WZO. What is surprising was his overwhelming mandate. In what has to be a record turnout for the Southwestern Division, the very popular Heyn came in with 4010 votes cast in his favor. That's more than a two to one majority over his challenger Glenn Webb, W6FP, with 1973.

Also re-elected were incumbent Directors Mary Lou Brown, NM7N in the Northwestern Division, John Kanode, N4MM in the Roanoke Division, and Marshall Quiat, AG0X in the Rocky Mountain Division. Howard Huntington, K9KM, was re-elected as Central division for Vice Director with Don Haney, KA1T reelected to that same post in New England Division. The new Hudson Division Vice Director, J.P. Kleinhaus, W2XX.

The terms of office for those elected are for two years, beginning at noon January 1, 1997.

(*****
VANITY PROGRAM ON HOLD

The FCC has confirmed reports that no more Gate 2 vanity callsign applications will be processed in the foreseeable future. This, until Commission personnel deal with complaints from several hams whose vanity applications arrived too early and were dismissed.

An FCC spokesman in Washington tells the American Radio Relay League that all of the affected hams all had used the same express service and had requested delivery on Saturday, September 21st. This, so they would be in the line-up for the opening day of Gate 2 on September 23rd. Instead, all of the applications arrived on Friday, September 20th. They were designated as "untimely filed" and dismissed by the FCC.

The affected applicants are now seeking to have their applications reinstated but the FCC says that it has no idea when a decision would be made in the matter. The affected applicants say that they were not aware that their applications had been dismissed until a week or so after the opening of Gate 2.

As for the FCC's position? The agencies' spokesman says the issue is under review. At best, the applications might be included with the day-two applications. At worst, they could stay dismissed. Either way, in many cases, the call signs they wanted have already been assigned.

Meanwhile, the FCC says that its Gettysburg office is a little more than halfway through a stack of up to 550 day-one vanity applications that needed some kind of special handling. Applications that the FCC calls WIPS for "works in process."

As many as 550 first-day applications ended up in this holding bin because the FCC was unable to match one of the applicant's call sign choices or because the application contained inconsistencies. Some as simple as a date of birth on an application that was missing or failed to match one already in the FCC's database.

The bottom line on all of this. For anyone wanting a vanity call sign, you may be in for a really long, long delay.

(*****
CONGRESSIONAL LOSS

Ham radio no longer has any direct representation in congress. Freshman Republican Congressman David Funderburk, K4TPJ, the only licensed radio amateur in the 104th Congress, lost his bid for re-election in North Carolina's second district three weeks ago.

(*****
SYNTHETIC APERTURE RADAR SYSTEMS

The Jet Propulsion Laboratory and other space agencies are eying the 70 cm Amateur Radio band for a satellite carried Synthetic Aperture Radar system. In addition to the U.S., The Netherlands and Japan want to use the 430-440 MHZ band for this type of radar to scan tropical rain forests and desert sand.

The proposed NASA and JPL radar will reportedly result in a very high-power flux density at the Earth's surface and could interfere with amateur operation, although SAR transmissions would be brief, not continuous. In other words, these radar systems will interfere with terrestrial systems whenever they are in view and the equipment is turned on.

The ARRL says that it is working to ensure that amateur interests are taken into account as the process moves forward.

(*****
FCC PROPOSES NEW SERVICE FOR REALLOCATED 2.3-GHZ

The FCC has proposed a new Wireless Communications Service or WCS in the 2,305 to 2,320 and 2,345 to 2,360 MHZ bands and to award licenses on the basis of competitive bidding. The bands include a 5 MHZ segment that Amateur Radio shares with government services between 2,305 and 2,310 MHZ.

Just before it adjourned in October, Congress approved a provision as part of the much larger appropriations bill. It directed the FCC to put the 30 MHZ of spectrum in the 2.3 GHz region up for competitive bidding to help balance the budget. It's believed to be the first time the Congress has ordered the reallocation of specific frequencies.

The FCC says the new WCS service would allow licensees to provide any fixed, mobile or radiolocation service, or satellite Digital Audio Radio Services. This, consistent with the international frequency allocations for these bands. The Commission also proposed to adopt no restrictions on eligibility for a WCS license and to allow licensees to partition their

service areas, to desegregate spectrum, and franchise portions of their spectrum or service areas on a leased basis.

Competitive bidding for the two segments will begin no later than next April 15. Comments on the proposal are due at the FCC by December 4th and reply comments by December 16th.

(*****
ADVANCED CLASS VE'S

The ARRL has asked the FCC to change its rules to permit Advanced class volunteer examiners to administer the General class license examination.

Under current rules, Advanced class VE's can administer only Novice, Technician and Technician Plus examinations. The League's filing says that allowing Advanced class VE's to administer General class examination elements will help to create additional opportunities for upgrading. It would also take some of the mounting pressure off Extra class VE's. The League estimates more than 15,500 additional elements could be administered each year if Advanced class VE's could administer exams up to the General class level.

(*****
HAM TESTING FEE GOING UP IN 1997

The price of getting a ham license is going up in 1997. This is in accordance with an October 31st FCC Public Notice setting the maximum volunteer examiner expense reimbursement at $6.26 for 1997.

The current maximum is $6.07. The new figure is based on a 3.13 percent increase in the Department of Labor Consumer Price Index. This, as calculated over the period September 1995 to September 1996.

The ARRL VEC says that it has set its 1997 Amateur Radio test fee at $6.25. Also as an ARRL VEC policy, examinations for the 5 wpm code test and/or the Novice written examination will not be charged the standard fee in 1997.

This fee schedule applies only to the ARRL. Each VEC is free to charge any amount as long as it does not accede the 1997 $6.26 maximum fee.

(*****
ELECTRONIC LICENSE PROCESSING

A new license renewal benefit is now in place for ARRL members only. The ARRL VEC says that it will process FCC Form 610 applications for a renewal, address change, name change or call sign change for electronic submission to the FCC.

There is no charge for this service but an original, signed Form 610 must be mailed or otherwise delivered to the ARRL VEC.

Sorry, but Faxed in 610's are not acceptable. Any questions or transfers should be directed to the ARRL VEC at area code (860) 594-0300.

NEWSLINE SUPPORT FUND

This week is the California edition of the September Fund Administrator's report, starting with the Yolo Amateur Radio Society of Davis, Van Batchelor, K6EHR of Vallejo, the Santa Barbara ARC, K6TZ, Darlene LaMont, KD6GCK, and Jim Robinson, KE6UAR of Occidental. From the desert areas, we heard from the Victor Valley ARC, K6QWR, the Barstow ARC, WA6TST, and members of the combined clubs of the Coachella Valley ARC, and the Desert Radio Amateur Transmitting Society, known as the "Desert Rats". Two regular contributors we heard from were the Antelope Valley Amateur Radio Club, and the Santa Clarita Amateur Radio Club.

Moving to the L.A. area, we heard from regular contributor Sam Panossian, KO6HE, of San Marino, Jeff Bertoldo, KE6ZXT of Santa Clarita, the Conejo Valley ARC of Thousand Oaks, Jeffrey Harris, KE6JMS of Rosemead, Russ Gray, WA6SSY of Monrovia, Dan Nesin, KQ6IA of Alta Loma, and the Brackett family of Cerritos. Let's see: there's Lynn, N6PIB, sons Jim, KE6FVN, and David, KE6OPK, and Lynn's wife Sharyn, an SWL. Time to get your call, Sharyn, you're getting left behind!

From L.A. proper, we received word from personal friend Bruce Nolte, N6TFS, another friend Gary Franks, W6NVY with a donation from the Los Angeles Unified School District Amateur Radio Association, and a big thank you to the Los Angeles Area Council of Amateur Radio Clubs. We heard from David Reeves, AC6PP of El Segundo, the South Coast Radio Amateur Network of Torrance, Nilan Kincaid, W6EIG of Hawthorne, Bob Paquette, KF6FDD of La Habra, and Bob Vitzelio, W6AEJ of Downey.

We heard from former Newsline reporter and regular story contributor Joe Moell, K0OV of Fullerton, Doctor Bruce Moricca, N6RB of Newport Beach, the Inland Empire ARC of Ontario, Joseph Brennan, KF6NO of Upland, the Riverside County Amateur Radio Association, and the Golden Empire Amateur Radio Society, GEARS, with additional from members Julian Lorenz, KE6VL, and Al & Joann Biegler, WA6WJZ and KA6WBR.

Moving further south, we heard from the Palomar Amateur Radio Club of Vista, the East County Repeater Association of San Diego, and regular contributor Del Radant, N6JZE.

Moving far to the west, we heard from Ralph Toyama, NH6PY of Honolulu, and the Maui Amateur Radio Club, KH6RS, who is celebrating its' 60th anniversary this year.

Remember that clubs that support us with the club name, repeater call, and service area, get a mention during the newscast ID break.

More with Andy in about four weeks.

(*****
THE END OF AO-13

The Amsat Oscar 13 satellite is quickly nearing the end of its life. AO-13 is expected to de-orbit before the end of November and burn up as it

re-enters the Earths atmosphere. The satellite is already showing signs of imminent failure with the heat levels in its solar panels rising to far above normal temperatures on each pass.

Even with AO-13 gone, hams will continue to have access to space relay communications. Still up there are the aging Amsat Oscar 10, several Russian Radiosport satellites and the new SAFEX 2 FM repeater on board the MIR. Also, Phase 3D is scheduled for launch next spring.

(*****
WINDTRACKS ROUND-UP

1996 was a good year for ham radio high altitude balloon experiments in the mid-West.

It's been a long summer, full of amateur radio high altitude balloon experiments. The small suborbit satellite project not only involved dozens of central Indiana hams, but also hundreds of school children.

The kids assisted with the balloon launches and tracking process. According to project director Chuck Chris, WB9IHS this years Windtracks Project was the most successful yet. Chuck says he hopes to recruit a core of hams to become Balloon Chasers and building DF equipment over the winter months.

Windtracks is scheduled to begin flying again in next year.

(*****
SAN DIEGO COMPUTER VOLUNTEERS NEEDED

The CGC Communicator -- a broadcast industry newsletter says that volunteers are needed in the San Diego, California area to help install internet computers at schools. The job includes running telephone wires and doing all the things necessary to get kids on line.

This worthwhile project is being coordinated by Mr. Heip Le. Le is an engineer with the San Diego FCC Field Office. You can volunteer by calling his pager at (619) 904-0579.

(*****
CHAPMAN UNIVERSITY PIRATE SQUELCHED

The CGC Communicator also says that a pirate station operating on 91.3 MHZ at Chapman University in Orange, California has been put off the air. The station began life as a "leaky cable" enterprise with very limited coverage. Then one day the range jumped to about 6 miles. The modulation was low but the carrier was strong enough to interfere with KUSC on 91.5 MHZ.

The FCC was asked to investigate. It appears that the Los Angeles FCC field office has done its work quickly. In fact it did an admirable job of amending the pirates ways.

(*****
U.K. LICENSES PULLED

Great Britain's Radiocommunications Agency has announced that it has revoked the licenses of two United Kingdon hams. They are identified as Mr. D. Randles, G0WNG and Mrs. M. Faint, G0UGN. No details were given in the Radiocommunications Agency press release.

(*****
TAPR SPREAD SPECTRUM STA

Back home, the FCC has granted a Special Temporary Authorization to Greg Jones, WD5IVD, and Dewayne Hendricks, WA8DZP, on behalf of Tucson Amateur Packet Radio, Corporation regarding spread spectrum communications.

Back on April 10th, TAPR requested a waiver of the rules and regulations governing Amateur Radio spread spectrum communications. This, in order to conduct an experimental program to test spread spectrum emissions over amateur radio facilities on different bands.

A Special Temporary Authorization is the authority granted to a permittee or licensee to permit the operation of a broadcast facility for a limited period at a specified variance from the terms of the station authorization or requirements of the FCC rules applicable to the particular class of station.

Full details on the TAPR spread spectrum STA are available on its web page at www.tapr.org in the Spread Spectrum area.

(*****
DX

In DX, word that the latest addition to the HF bands worldwide propagation beacon network came on the air on Sunday, November 3rd. Its callsign is 5Z4B and it operates from Mombassa, Kenya.

As with all beacons in the network, 5Z4B transmits in the 20 to 10 meter bands using stepped power ranging from 100 watts down to 100 milliwatts. The transmitters feed a 5 band vertical antenna.

Also, the Madeira Island CS3B beacon is back on after some time off for technical repairs.

(*****
YES! THERE IS JUSTICE !!

This from Doug Dickinson, KL7IKX up in Anchorage Alaska. Doug says that a few nights ago he chanced to look out of a window in the living area. The lights were off, so it was easy to see outside but nobody could see back in.

Doug says that he noticed two young people leave their snow machine in his front yard. They came into the driveway with a gas can, went to his car and sucked out about two gallons of fuel. Next they mixed oil with it, went back to their snow machine and poured the mixture into the gas tank.

They ten pulled the starter rope. In fact they pulled, and pulled and pulled and pulled on the rope, then they pulled some more. Finally, they gave up and the two young fuel thieves departed on foot!

What the teens did not know is that KL7IKX drives a diesel car. What they had done was to steal number one diesel oil and mixed it with 2 cycle oil. The numerous attempts to start their snow machine, made sure that the bad mixture was thoroughly circulated throughout the snow mobiles fuel system.

Doug says that it was all worth waiting and watching. He adds that he only wishes he had turned on the ATV transmitter and camera, and taped this event, This, to show to his fellow hams at a later date.

You might try WW Associates at:

http://www.wwassociates.com/battery.html

They have replacement batteries for just about all radios.

I use a hand mic. The radio is attached to the handlebars. See below.

> * What is the best way to secure my HT to the bicycle? Ideally, it
>should be easy to attach the radio to the bike and easy to remove it. Or
>is it easier to somehow attach it to myself or my backpack?

I took a mount for a handlebar-mounted light (Cateye is the brand of the light) and modified it to mount on the back of my ht. If you want details of this arrangment, email me.

> * I think a simple dual-band mobile-style antenna would probably be
>the best way to get out. My bicycle is a mountain-bike style and I can
>easily get a
>rack to fit over my rear wheel. Is there a mobile antenna mount that
>would easily and securely attach itself to such a rack? Can anyone
>recommend a particular antenna/mount combination?

I use the rubber duck. Distance isn't great but then again our club rptr is at 825 feet or so (http://www.intercom.net/user/jxs2151)

> Anything else I should keep in mind?
>

When mounting the radio to the handlebars I had to do some mods to the mounting arrangment to dampen vibration. I have a road bike so bumps are minimal. I am much more concerned for the radio when I mount it to my off-road bike and go off-road, particularly because the radio is right in front of my face and I can see it being bounced around. This will probably not increase the usable life of the radio :--)

Hi Burt,

Its been a while since you've posted but I imagine there is some sort
of pattern that can be found (both content and time frame-wise) with
respect to your posting habits. It good to have you back as things
have been kind of boring.

The only on-going threads are related to the code/no code argument. A
few on each side continually repost the same arguments over and over
again and have gotten into some name calling as well. I guess that
sounds familiar to you. So where do you stand on this argument?

There was an interesting article posted to r.r.a.m. recently. It was
titled *Do As I Say, Not As I Do* and the author's name was supposedly
Bigmouth Uneducated Retarded Teacher. As you might guess the post
takes more than a few shots at you. If you haven't seen the article
you might want to visit Deja News and have a look.

There is one rather disturbing charge that was made concerning you and
a male student. Supposedly the story was in the Boston Globe on
October 5, 1987. I tried to find the story in the Globe's on-line
archives but was unsuccessful. Were you really suspected of this
charge and if so what were the details leading to your exoneration?
Your public wants to know.

glad to see you are still full of piss and vinegar

Ignore Burt. He and his give amateur radio a bad name.

10 meters has been somewhat quiet lately due to the lack of solar activity. but that is changing.

I just reinstalled my 10 meter mobile rig last week and have been hearing several stations within 1k miles. as
the band opens over the next few years that will improve greatly.

Also, the 10 FM repeaters have been fantastic with the quiet conditions.

AMEN!

For a number of years the FCC talk at Dayton included the
statement that the FCC would be happy to answer your
Part 97-related questions! Have a copy of Part 97 there
when you call. That way you can follow along as they read
you the section in the book.

The very same situation exists in this case. Read them
the paragraph containing the information about when to
apply and move on.

We have some really dopey amateurs among us and this
delay points a spotlight at the worst of the worst.

In article <32972874.421B@io.com>, Matthew A. Erickson <kk5dr@io.com> wrote:

> Are we witnessing the "twilight of amatuer radio" ?

Yes. Amateur radio will always be around, but I suspect in a much
reduced fashion within the next decade or two.

>Is amatuer radio slowly dieing from its "bloated" buracrecy, poor operators,
> and choking on it's own excesses ?

Exactly what "bloated bureaucrasy" and "excesses" are you referring to?

> Todays "on-the-air" amatuer radio public image, is tarnished, to say the
> least.

How so, exactly? Most people I know believe unfamiliar with amateur radio
believe "Amateur Radio == CB". Is that what you mean?

> Very few amatuers perform public service, or regular public image polishing.

This is not an amateur radio problem. It is a generic problem of society
manifesting itself in amateur radio.

How, you ask? Simple.

Remember those "10 million new jobs" that Bill Clinton created? Well,
what he forgot to tell you is more and more people are holding down two
or more jobs, or both spouses have to work, in order to "make ends meet".
As the joke goes: "Bill Clinton is having lunch with Hillary and sez
'Hay Hillary how about those 10 million new jobs I created'? The waiter
overhears him and responds 'Yeah, and I have three of them'.

> Most amatuers occupy their on air time with useless idle chatter,

Because people are working more, they have less leisure time. As such,
they spend more time on idle activities (like chatting about nothing)
on the air instead of doing some other activity. Its human nature.

> or even bad operation & manners. What does the public think, when
> listening to this type of "counter produtive" activity ?

"The public" doesn't listen. "The public" doesn't even know what amateur
radio is today.

> The only way amatuers can "justifiy" our claim to spectrum, is to make the
> public want us to stay on them, and continue to serve it. We must prove we
> can serve the publics best interest, not just by siting deeds of the past,
> but by "Doing it now", serve the public in any way we can with amatuer
> radios powerful communications network, prove NOW, that we can provide

> communications "free of charge", anytime, anywhere, in any conditions.
> Public service is the key to amatuer radios very survival... [snip]

I don't inherently disagree with this. The problem I see is decreasing
the standards to obtain a license results in more and more people treating
amateur radio like the Family Radio Service.

>Deregulation of amatuer radio is coming, it's not a question of IF, but when.

Other than licensing, deregulation is already here.

>to incoming frequency.

Actually, you adjust the local oscillator to 10.7 MHz higher than the received frequency; 109.4 MHz in your example. This converts the antenna signal to the standard 10.7-MHz intermediate frequency, where the signal is amplified, tuned (interference rejected), and converted back to an audio signal. -Dan, K8JWR

1519. lookup@qrz.com Privacy violation ?

The gain of a thin dipole is well known. You should be able to make good measurements over a narrow frequency range with one if you take care to decouple the outside of the feedline and account for the feedline loss. If you need directivity, the NBS published a standard Yagi some time ago with known gain. I don't recall where I came across it, but perhaps someone can point you to the publication. You should also be able to get within a fraction of a dB of the gain predicted by a computer model of a simple antenna.

If you need traceability, you'll probably have to buy an antenna. Several companies advertise in EMC-related trade magazines and I can send you some addresses if you'd like. Last I checked, prices were in the ballpark of $1k.

It's tricky to calculate near-field power density. In the far field, you know the ratio of E/H so you only have to measure one to know the other and, hence, the power density. In the near field, you don't know their ratio so have to measure both E and H in order to compute the power density.

Seems like lots of new hams that don't seem to understand how the closed/open/private systems were set up (most a long time ago.) And then some people who seem to think that all but free, open repeaters with no memberships or fees are the ONLY way that repeaters should be coordinated.

This thread gets started about every 7-8 months - just about as often as "What;s the meaning of HAM?", or the code vs. no-code debate. Fortunately, it will die out again soon until another new bunch of internet newbies and new hams come up with this new "radical new proposal" to reform how repeaters are done, and how it's not fair that they can't have one too....

Conductive liquid doesn't sound like a good thing to squirt into a pot unless you can tolerate the leakage paths it'll create. I use WD-40. Works great.

Hi Tony -- You might want to look at the DX Reference Page Listed below.
It has DX country links -- a Mega prefix list, Russian Prefixes,
Japanese Prefectures , Zones and much more.

No, this is all public information. It is available on most radio
station licensees: public, commercial, private and, yes, Amateur.

I am looking for manual for Yaesu ft480r. Good txcvr but bit hard when you fly blind.
Also have to put microphone on floor to talk or else over drive rig. Not good. People complain.
Also looking for mods for digitor 2m rf power amplifier model D-2510. Mine does 30watts but I heard on grapevine they will do 100w. Also circuit diagram for same.

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12 noon. Please note the change for the month of June.
Re-scheduled because of Field Day and Father's Day.

Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring RED (TOP) buzzer
for entry.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1996 Exam fee is $6.05, please bring exact change.
* Novice exams (elements 1A & 2) are free.
- **** 1997 Exam fee will be $6.25

For addition information you may contact:

Regarding placement of the HT, Cannondale and many others have a pack that rests between the handlebars. Not only is this the best place for the radio to be for convenience, the handlebars protect the HT in case of a crash. If you use drop bars you will need to remove the second set of brake levers that parallel the handlebar as it goes into the stem. Those second set of brakes are not very useful anyway providing only about 30% of the leverage that the primary brake levers provide on the forward part of the drops. You can hold about 10 pounds in that front pack which is more than enough for radio, extra batteries and more. You can also take the pack off and carry it in as you need to.

This system is much better than clipping the radio on the belt because you will not ever be concerned about it coming loose and having to adjust it while riding.

I have used a HT over 7500 miles without problems.

DIVISIONAL NEWS
REPORT ON AFFILIATED CLUBS CONFERENCE.

In the absence of a Presidents Report it was considered appropriate to offer listeners a rundown on the Affiliated Clubs Conference held recently in Parramatta.

A total of 18 clubs advised their intention to attend but subsequently only 15 actually attended - a minimum of 11 being required for a quorum. Apologies were received from Tumut, Bega, Orange & Dist., Orana Region, St George and Waverley clubs.

The conference was held over two days Saturday and Sunday and all who attended agreed that it had been well worthwhile.

After the welcome on Saturday each delegate introduced themselves and their club with a brief outline of club activities - the various Councillors present also
introduced themselves and their areas of responsibility.

Policy & Strategy:
The first session was on Policy & Strategy and was chaired by Peter Jensen VK2AQJ - Vice President and Chairman of the Policy & Strategy Committee. Peter circulated a paper which had been tabled at a recent Council Meeting which outlined some of the areas which were seen as likely to be of major significance over the next five years.

Some of the areas were:

Lack of image of Amateur Radio and the need for public relations
Strength of the WIA as a representative body
Involvement of younger people in Amateur Radio
The need for on-going training
Spectrum demands & vulnerability
Proliferation of computers

Peter gave a run-down on the Committee and explained the rationale behind the objectives outlined in the paper. He pointed out that because we are a voluntary
organisation the objectives outlined needed to be viewed in the light of the fact
that people could not be detailed to do various tasks but it would be a case of "Who would be willing do what". It was also a matter of making Amateur Radio, and the WIA, attractive to young people brought up on computers

Peter then opened the meeting for questions:

Roger VK2FGE of Armidale asked what would be required to do this and how will the infrastructure be set up to involve clubs?

Peter replied that the WIA provides a framework of support, publicity and financial backing, within which the clubs can operate independently.
The problems associated with lnternet Voice-mail were mentioned and compared to CB radio - only was far worse. Comments were voiced regarding E-mail and it was pointed out that this is not an option for everyone - particularly in country
areas where reliable service providers were all too far away and therefore too expensive.

Roger VK2FGE commented that the links between clubs and the Division now appeared to be back on line but pointed out that the document did not make clear the relationship between the Federal Body and the divi!sions. Peter gave a brief
explanation of the makeup of the Federal Council and Secretariat and their roles.
Roger thanked him for his explanation and commented that it was very important that rank and file members needed to feel that they were somehow part of the decision-making process.

Barry VK2AAB of AAPRA suggested that some consideration should be given to the system in New Zealand where each club is actually a branch of the parent body -NZART. Brian VK2UBF of lllawara raised the question of having one body of WIA rather than 7 independent divisions

Peter VK2AQJ then turned to the discussion items which had been submitted by the various clubs :

Voting rights for Associate Members - (submitted by Southern Regional Conference on behalf of Wagga club.)

After lengthy discusssion on the pros and cons a resolution was put for submission to the Divisional Council " That the staus-quo re Associate Members remain" and was Carried unanimously by the meeting.

Wanted - Ideas to expand WIA Membership and Amateur ranks in general. (Submitted by Southern Regional Conference.)

A lengthy discussion followed with suggestions from various delegates such as "AR Magazine" sent to High School libraries, content of broadcasts, Courses for Forces Cadets and High School electronics classes. There was also a general discussion regarding young people and CW versus computers and the image generated over the years of Amateur Radio being an "Old persons hobby" and geriatrics tap-tap-tapping away on morse keys - and the need to overcome this.

It was pointed out that Clubs were prone to ask the WIA- what it is doing to attract new members but clubs should also be encouraging people to join for their
own sakes as well as the WIA. Don't forget the local knowledge is at Club level.
The general consensus was that recruitment should be stressed at Club level and successful ideas and strategies be distributed, via the Affiliated Clubs Officer

to
other clubs.

How many members needed for club affiliation. (Submitted by Tamworth ARC)
The current policy is that a club must have a minimum of 5 WIA members to be affiliated. Again there was a lengthy discussion with most delegates taking part.

Terry VK2KDK of Tamworth commented on the problems of remote clubs in this regard when the total membership was very low. One comment was that as with a Trade Union - should non members reap the benefits.

It was then moved that a resolution should be consideration by the Divisional Council " That where the total membership of any club is 10 or less, then at least
50% must be WIA members for the club to be affiliated. lf total membership is 11 or more at least 5 must be WlA members if the club wishes to affiliate". Carried.

The Conference then adjourned for afternoon tea.

After the break Eric VK2EFY Divisional Secretary took the chair and introduced Ms Margaret Friend of Select Insurance Brokers who spoke at some length explaining the WIA umbrella arrangements in place for affiliated clubs. She pointed out that the Public Liability Policy was a "Broad Policy" in that it covered
many facets not usually covered in a normal straightforward Public Liability Policy. Ms Friend said that a comparison carried out showed that a similar policy
with another company would cost somewhere in the region of double the cost.

She explained at length the various aspects of the Public Liability Policy and how
it could affect clubs and particularly their responsiblity - she also stressed that no
hard and fast rules could be given as to what would be allowed and what would not because each case was taken on its own merits.

Ms Friend said that because of the law regarding payment/wages etc. Clubs should be aware of the their liability etc. for members working on towers etc. at
the request of the club. If, she pointed out, any payment was made by the club to the person undertaking the work (other than out of pocket expenses) then as far as the law, and Insurance companies, were concerned that person was being employed and the club should have Workers Compensation Insurance - even, she pointed out, if the amount was only $5.

Because most work by members was undertaken on a voluntary basis with no payment involved accidents to members would then by covered by what is called a "Voluntary Workers Policy". She said that the WIA had requested that such a policy be negotiated and this had been done. A copy of the policy, price details
had already been circulated to clubs, would be available to go out with the

Conference minutes.

Ms Friend answered many questions from the floor to clarify difficulties or concerns raised by many delegates and she agreed to stay for the evening meal to give other delegates the opportunity to discusss concerns or queries with her.
Eric Vk2EFY thanked her for coming along and the meeting gave her heartfelt round of applause.

The next session was SMA / NTAC chaired by NTAC Chairman and Vice President Geoff McGrorey- Clark VK2EO. But more on that and the address given by Mr Bill Vlies, Acting Manager SMA, Sydney next week.

--Eric Fossey Vk2EFY, Divisional Secretary

NEW IN THE BOOKSHOP.
WIFB's QRP NOTEBOOK; YOUR QRP OPERATING COMPANION;
YOUR HF DIGITAL COMPANION;
TRANSMITTER HUNTING & RADIO DIRECTION FINDING SIMPLIFIED;
The new edition of THE ARRL SATTELITE ANTHOLOGY;
More copies of TRAEGER - PEDAL RADIO MAN;

Also - The 1997 ARRL handbook is now available on CD-Rom. We do not carry it in stock, but we will order it for you. Cost to Members will be approximately $85.00, depending on the exchange rate at the time of purchase. Delivery time approximately four weeks from placement of order.

WIA - NSW DIVISION
CHRISTMAS BARBECUE
TO BE HELD ON SATURDAY 14th DECEMBER
at
59 WESTBROOK AVENUE WAHROONGA
FROM 4.00 PM
ALL MEMBERS OF THE NSW DIVISION AND THEIR FAMILIES
ARE INVITED TO ATTEND.

COST $10.00 per head.

Swimming Facilities available.

All food provided. Please bring your own drinks.
Please advise numbers, with payment, to the office
by 6th December, so Jo knows how many to cater for.

The 1997 Call Book is now available from the Office. The price is $14.95. Discounted price to members is $13.00. If you want it posted to you, please add a further $2.50 for postage and packing.

DURAL XMAS PARTY.
The usual end of broadcast year function will be held on Sunday the 22nd December at the conclusion of the morning callbacks. This is early advice for you to note the date on your calendar.

DURAL REPORT
It has been some time since we last reported on activities here at the Divisional broadcast station VK2WI.

Following a report that the 2m beacon VK2RSY was not working, the beacon keyer was found to have failed; it will be back in service as soon as possible. Incidentally, it would be appreciated if fault reports such as these could be supplemented with observations on whether the other beacons are working, along with the repeaters; this will save some time with the initial diagnosis.

The 160m receiver has been repaired; we note that callbacks are now picking up. Steps have been taken to protect this receiver, along with the other HF receivers, from nearby lightning strikes. Speaking of callbacks, we note that propagation is changing once again, so our broadcast schedule will be revised shortly; there is now every chance of an outlet on 20m.

We ask our relay stations to advise us on the usefulness of our morning AM transmissions; would you like them to remain, or would you prefer that they switch to SSB instead? Indications are also sought from our short-wave listeners as to their usefulness.

As mentioned on previous broadcasts, the last morning transmission this year will be followed by a barbecue for the benefit of the Dural team and and other interested parties. Drinks and nibblies will be provided, but please bring your own lunch; our resident bush-fire fighter will advise us as to whether we can actually light a fire or not.

Despite several pleas for 2m and 6m SSB equipment, none has been forthcoming, so it appears we shall have to scrap the transmissions on these modes. If there is anyone out there who wants their Division to be heard on these modes, this is the time to speak up.

Expressions of interest in the purchase and subsequent removal of the petrol generator at Dural are sought; please enquire at the office for further details.

Finally, it would be appreciated if whoever borrowed the "Bird 43" power meter, serial number 32275, with three slugs: a "10D" 10 watt 200-500 MHz unit, a "58" 5 watt 50-125 MHz unit, and a "Coaxial Dynamics" model "82004" 50 watt unit on 2-50MHz, could please return it; it's needed back at Dural.

-- Dave VK2KFU, Dural Engineer

WICEN NEWS

As mentioned last week, plans are underway to move the WICEN Web page to another host; this will hopefully improve service to all users. It will also be possible to set up several mailing lists for the use of WICEN personnel with Internet access; further details will be announced as they come to fruition. Please note that no change in the Web page address will be necessary, thanks to the wonders of the Domain Name Service and virtual hosting.

Next month's meeting of the Management Committee, on 14th December, will be somewhat brief, as it will be followed by a barbecue; bring your own everything, and a grill will be supplied. We thank Burwood SES for their hospitality.

The only exercise next month would appear to be the Lion Island Speedboat Classic, on Sunday 15th December; the organiser for this event is not yet known.

This is followed by the Hunter region barbecue, on the 21st December. Next year sees the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March; the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

UPDATE ON THE ANTARCTIC DXPEDITION TO HEARD ISLAND

The departure date is rapidly approaching, and the enthusiasm and excitement within the team is overflowing.

If you missed the details in prior broadcasts here is a quick summary. The Heard Island Dxpedition is a collection of some of the worlds best operators from all over the world. The team is twenty hams coming in from ten different countries to establish a ham station at Heard Island. Heard Island is Australian Antarctic territory in the southern Indian Ocean. Heard Island is currently listed as either the 2nd or the 3rd most sought after dx location. One of the goals of the expedition is to break the world record of the number of dx contacts made, out target is 100,000 QSO's. So I hope to see you in our log.

Currently there is one spare spot in the team, so I you are interested in joining the expedition it is not to late. Please contact David, ASAP.

The Schedule and call signs:

The Heard Team schedule is as follows:

DATE LOCATION CALL
Dec 29-Jan 2 Reunion Island TO0R
Jan 8-9 Crozet Island TX0C
Jan 13-27 Heard Island VK0IR
Jan 30-31 Kerguelen Island TX0K
Feb 6-9 Reunion Island TO0R

OPERATING FREQUENCIES
CW SSB RTTY
160M: 1.826.5 N/A
80M: 3.507/3.522 3.799
40M 7.007 7.065 7.030
30M: 10.104 10.140
20M: 14.024 14.195 14.085
17M: 18.074 18.145 18.105
15M: 21.024 21.295 21.085
12M: 24.894 24.945
10M: 28.024 28.475

On behalf of the team, I would like to thank those organisations, clubs and individuals who have donated funds. For with out this kind of financial assistance a project of this kind just would not be possible.

Recent Australian contributions have been gratefully received from: (And this is in not particular order) Midland Amateur Radio Club Inc., Riverland Amateur Radio Club Inc., Healesville Amateur Radio Group, Wireless Institute of Australia - NSW Division, IPS Radio & Space Services, Sphere Communications, Australian Geographic, Mountain Designs and thanks to those personal contributors who wished to remain nameless.

If you or your club is considering supporting this dxpedition then please send in your donations now. As we are still a long way short of what we need in order to carry out the expedition safely and as planned.

Donations can be sent to:-
Heard Island Expedition
Locked Bag 29 Post Office
RYDALMERE NSW 2116

For those interested in memorabilia or stamp collecting, there will be a special limited issue stamp cover released commemorating the Dxpedition and the 50 years of Australian National Antarctic Research Expedition (ANARE), who established the first research base at Heard Island back in 1947. If you are interested in more information then please contact me.

Information about the dxpedition can be seen on the internet at:-
http://www.gec.com.au/hi.html

This expedition is being funded by participants, donations and corporate sponsorship. We are still in need of funds and support, if your club or organisation would like to assist then please contact David VK2TQM during the day by phone 02 898 7426 or Internet Email davidm@gec.com.au or Packet: vk2tqm@vk2tgb

Thanks and regards,
--David VK2TQM, Expedition Member

IRAN COMING BACK ON THE AIR
Iranian hams may soon be heard on the air. The British Broadcasting Companys' Monitoring Service says that the Iranian Ministry of Post, Telephone and Telegraph will soon be issuing amateur radio licenses to Iranian citizens.

The BBC quotes the Teheran based English language newspaper, the Iran Times. It notes that the PTT has invited radio enthusiasts over the age of sixteen to sign up for special training in order to receive an amateur license. As previously reported, Iran's PTT announced last year that it was considering the resumption of Amateur Radio in that nation. So far, this is the first confirmation that the Iranian government is willing to proceed in that direction.

CLUB NEWS

ORANA REGION AMATEUR RADIO CLUB

The Bi-monthly meeting of the Orana Region Amateur Radio Club will be held this Thursday, 28th November at 8 PM in the Scout Hall in Talbragar St Dubbo.

The talk that was to have been given by Telstra on Fibre Optics at this meeting has been cancelled, and is re-scheduled for the meeting to be held on 27th March.

--Ken Westerman VK2AGW, Dunedoo

HUNTER BRANCH RADIO GROUP

The Hunter Branch Radio Group, will be holding it's bi-annual ladies night dinner at the Silver Dolphin Restaurant, Cardiff Workers Club at 19:00 hrs on Thursday 12th of December 1996.

All members, interested Amateurs and scanner listeners are invited to attend either with or without their partners.

Please contact Frank VK2XVJ to record your attendance, the number to call is (049) 33 37 60, I repeat (049) 33 37 60 or leave a message on Packet addressed to Frank Weber VK2XVJ @ VK2KLW or by E-mail to Frank@nmc.org.au

--Frank Weber VK2XVJ, the Hunter Branch Radio Group Publicity Officer.

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL
ON THE 2ND SUNDAY OF THE MONTH IN DECEMBER AT 109
WIGRAM ST. PARRAMAITA 1.00 PM - LAST ONE FOR THE YEAR.
TECHNICAL LECTURES WILL BE ON AS FOLLOWS...
1.THE SHOWING OF THE NEW 'BDB' 1.2 GHZ 23CM CLUB

RECEIVER.
2.THE SHOWING OF THE NEW 1.2 GHZ 23CM CLUB PRE-AMP.
3.THE SHOWING OF THE NEW AGC/MICROPHONE BOARD.
THOSE MEMBERS WHO DID NOT PICK UP LAST MONTHS
NEWSLETTER CAN DO SO AT THIS MEETING.
OTHER ITEMS MAY BE INTRODUCED IF TIME PERMITFING.

NOTICE TO ALL COMMITTEE PERSONS....
-- NEXT MEETING TO BE HELD AT KIERANS

[warning for humour-impaired: jokey bit coming up - VK2SKY]

MANLY-WARRINGAH RADIO SOCIETY

Just a quick reminder to members of the MANLY-WARRINGAH RADIO
SOCIETY that the club's annual Christmas dinner will be held this Friday at the Belrose Bowling Club, starting at 7:30pm. If you would like to come along, but you haven't notified the club, please do so in the next few days, so that we can make sure there's a seat for you (and your partner).

The Manly-Warringah Radio Society meets at 7:30pm every Wednesday evening at the Warringah Volunteer Services Centre, Terrey Hills. The second Wednesday of the month is the club business meeting, and the lecture is on the third Wednesday of the month. As always, visitors are welcome. If you need directions to the club, call in on the club 2m repeater on 146.875 MHz.

--Richard VK2SKY

THE HORNSBY AND DISTRICTS AMATEUR RADIO CLUB INC.

The next meeting of the Club will be held on Tuesday the 26-11-1996, at 8:00 P.M.; it is the monthly meeting followed by a lecture, on life in Antarctica. with photo slides. At the

Mt Colah Community Centre.
Pierre Close.
Mt.Colah.
(Near the Eastern entrance to the Railway Station.)

The Club will be running classes in 1997 for the Amateur Radio Certificate of Proficiency, commencing early Febuary, with examinations being conducted at the conclusion of the classes. If you would like to know more about the classes., give Tony VK2BTL. a phone call on 0487-3383.

I am amused!

Well, OK, I'm really not amused...

Given that AEA is in the process of selling off their residual production to go out of business, I am just amazed at this impressive good deal R&L Electronics is offering... NOT!!

It sure looks to me that they're all too willing to screw a few customers to solve their stock problems...

Wouldn't it have been a little more fair of you to caveat your ad here with the note that they who buy AEA products now do so with little to no possibility of product support, since AEA is about to go belly up? Oh well, bidness is bidness!!!

As always: caveat emptor. I'll remember this ad next time I'm shopping for gear...

Right on, Steve. It is ironic that Burt adds to his sig:

> If you try to milk too much, you won't get a drop
> Samantha Fisher

because this is what he tries to squeeze out of many posters and apparently in his thoughts.

Fact is 10 M (or anything above 20 MHZ) will not be vibrant for long-hop until solar sunspots become lively. At the peak, one can work the world with 10 watts or less. But, not now!

>activity occuring within a radio?

You can think of the radio as a telephone without the wires.
Data is often sent over voice grade radios. These are SSB (a
form of AM) or FM radios which would normally carry voice
signals. Their audio bandpass is about the same as that of
an ordinary phone line, so the modem can treat the radio
like a phone line. There is one very significant difference,
however. The radio normally operates *half-duplex*. That means
that the radios at each end take turns transmitting and listening.

This means that ordinary phone modems won't work. They
expect a duplex connection. Certain older phone modems
would work half-duplex, the Bell 103 (300 baud) and Bell
202 (1200 baud) standards. These are simple AFSK modems.
We use those over half duplex voice grade radios.

Modern telco modems use a *training sequence* to equalize
the particular phone line being used so that higher density
modulations like QAM can be used. That won't work on half-duplex
radios because the modems expect a duplex circuit over which to
train, and because the radio path doesn't stay constant over time.
What this latter means is that a training sequence that's valid
at one instant may be invalid in the next due to the changing
propagation path.

Also, we use radios in a CSMA environment, transmitting packets
of data. This means that from one packet to the next, a radio may
be exchanging information with a different radio in a different
location. This too negates a training sequence. Packet also has
another difference from phone line operation. Call setup is
different. With a phone call, call setup and addressing is done
out of band by the phone company, and once the connection is
established it remains in action until the call is terminated.
So a single training sequence can be used at the beginning of
the call and remains valid for the duration of the call.

Packet doesn't work that way. The channel may be shared with
several radios, and they may all intercommunicate in any order

at any time. This requires addressing information to be included in the packet header. This header has to be decodable by all radios on the channel. That also means training sequences won't work because you can't know *which* training sequence to use until you know which radio is transmitting, and you can't know that until you decode the packet header, which you can't do until you apply the correct training sequence for that radio pair. It is Catch 22.

Now it is possible to operate full duplex radios, and it is possible to locate them on exclusive channel pairs (equivalent to the call setup and addressing done by the phone company), and in that case ordinary telco modems can be used. They can train and use the duplex channel just as they would the phone line. There is still varying propagation to consider, but on a good VHF path between fixed stations this isn't a big problem. So in this special case, which isn't typical of amateur operation, ordinary 28.8 kb telco modems can be used over voice grade radio.

>How is digital transmission done through wireless communication?

Now what I wrote above is typical of amateur practice. But there are other ways. Instead of a voice grade radio using what is essentially a telephone modem, we can use a RF modem. In this case, our data is translated directly to RF and vice versa. This frees us from the limitations of the voice grade radio and allows us to use denser more complex modulations and higher data rates.

The RF modem will typically be an I/Q radio (quadrature modulation). The advanatage of I/Q design is that we can generate or decode any arbitrary modulation form with it by suitable manipulation of the I and Q channels. Some of the modulations we may employ are FSK, GMSK, PSK, DPSK, QPSK, QAM, or any generic M-ary modulation scheme that we like. We can use Trellis coding, or Reed-Solomon coding, or any other coding that we like to make the channel more robust. This is called FEC, or Forward Error Correction.

An example of an I/Q radio is the WA4DSY RF modem. This unit uses MSK to transmit a 56 kb data stream with an occupied bandwidth of 1.4 Hz per baud. By contrast, Bell 202 over a FM voice grade radio needs 12 Hz per baud, and handles 47 times less data. The advantage of the RF modem is that there is no intermediate audio step between data and RF. This frees us from the requirement for training sequences and all the problems that they bring.

>Is there a common ratio for the Wattage needed to cover a certain
>area? E.G. X number of watts will cover Y number of miles.

No, it isn't that simple. The terrain over which the signal must be propagated, and the frequency used, are the primary factors determining range. If the antennas are high enough so that the

signal clears terrain obstacles (called line of sight propagation),
very low power can cover very large distances. With terrain obstacles,
even high power may not permit coverage, even over short distances,
depending on a number of complex factors particular to any given
situation. This is where a good RF transmission engineer earns
his pay. There are tools which allow one to calculate coverage
under given conditions, but they have to be applied with care
and an understanding of the factors involved.

Amateurs tend to gloss over these factors and just turn up the
amplifier and pray, but that results in a rather hit or miss
situation. Good path engineering can give what the phone company
calls four nines coverage reliability, IE the channel will be
functional 99.99% of the time.

>I know that cable TV runs over coax, but I did not think that Cable is
>digital. Is cable a form of analog transmission?

Yes, it is basically radio confined to a wire. It uses the same
sort of signals as are used over the air, but the signals are
confined to the cable instead of being radiated.

1553. Vanity Calls "R" Us!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-23 00:00:00 UTC
From: Roy Tucker Family <tuckers@vanitycalls.com>
Message-ID: <3296D4F5.7ED7@vanitycalls.com>
Source record: 212257

Hi everyone, Roy Tucker and Family here! Just wanted to tell everyone
about our half off sale on ALL of our old club callsigns. Hurry!
Don't wait! They will go fast! All of the old club calls are
slightly used with some mileage on them, have some tears and wrinkles,
kinda worn, and one was even used on Field Day!

Help me sell off these old calls so me and my family can afford
to pay off the credit card companies for the new calls when the
bill is due in January! Heck we can't even afford a computer to
read all of your lovely comments about us on the group here!
Right now I'm down at the La Mirada Public Library hacking this out
on a tricked up Commodore 64 that needs quarters every 10 minutes.

God I didn't know 300 baud modems were really this fast! I get
about 100 messages every 6 hours into this C64. Thats alot of
quarters. Maybe that gentleman out there who figured out how much
we spent on all of our new vanity calls can tell us how much we
spent to write this!

Also my thanks goes out to all the fine comments from KF6FCN, Fred
White, Robert Casey WA2ISE, brpeter@ix.netcom.com, and countless
others that really care about the Tucker Family. Without you
I wouldn't be sitting here having this 14 yr old kid type for me.

Make sure you listen to 147.435 everyday now as we will be announcing
the winner of the "Most Loved Newsgroup Poster of the Tuckers".
Winner will recieve a nice gift and will be locked in a room and
forced to the listen to one of my long nets.

Thanks everyone,
Roy Tucker and Family

>mhz band or the 1.2 ghz band...2m and 440 are crowded as is now....
>Use the bands before we lose anymore....

I would suggest that's an amateur public policy issue that should
be addressed by the coordinators representing the amateur public
in each region. However, even though I don't favor restrictive
membership repeaters, asking them to relocate to another band
isn't a step to be taken lightly. One could just as easily ask
that those wanting open repeaters go and establish them on 222 MHz,
902 MHz or 1.2 GHz instead of attempting to evict currently existing
repeaters from the channels that they have long occupied.

As you say, we need to use the bands or risk losing them, but
you've given no compelling reason why it must be those with long
tenure on 2m and 70cm who must bear the burden of doing so.
(Note, I believe there are some compelling reasons for such a
course, but the burden is on you to articulate them.)

>that is the case, then they have the primary responsibility to resolve
>the problem.

And that's the issue in a nutshell. Coordinating a restricted membership repeater (whether it is called closed or private or whatever is irrelevant), gives it priority access to the common property of all amateurs, their spectrum. So you *are* making a claim to a frequency pair despite your protestations to the contrary. (The fact that 97.205[e] *allows* repeater owners to restrict membership isn't in question. What is in question is the coordination of such stations so that they have a priority claim to a frequency pair.)

This is a coordination issue. Part 97 doesn't set down many coordination guidelines. This is left to the amateur operators whose stations are eligible to be auxiliary or repeater stations in a local or regional area (97.3[[20]). Those amateurs are every amateur holding a Technician, General, Advanced, or Extra class license in the local area or region (97.205[a]). (You don't have to actually own a repeater, you only have to be eligible to erect one, to fall into the class of persons a coordination body is required to represent in their decisions.)

The problem appears to be that some coordination bodies aren't being representative of or responsive to those they are required to serve, IE the *entire* amateur community (other than Novices) of the region they represent, when they give such a priority for amateur spectrum to restricted membership repeaters.

What we should be addressing here is the legitimacy of coordination bodies who have demonstrated that they are *not* representative of and responsive to those they are required to serve. If SCRBBA, or any other coordination body, and its closed/private coordination policies, are not meeting the wishes of the entire amateur community they are required to serve, a simple ballot of no confidence by the general amateur community would render their coordinations null and void by withdrawing recognition from them as the coordinator of auxiliary and repeater stations for that area or region.

A representative body could then be established to coordinate auxiliary and repeater stations in the interests of the entire amateur community. This wouldn't necessarily remove closed/private

repeaters from the air, but it would withdraw the cloak of priority
sanction that they currently enjoy and enable others to establish
open repeaters on the channels that they occupy.

The TS-140S is the only hf rig I have ever had, and I've never had any bad signal reports. I bought it because it was the cheapest general-coverage rig I could find when I first got my license and I don't regret it. I also use it for hf digital modes and it works great. I've used it mobile also. It's fairly bulky for mobile use compared to newer rigs like the TS-50 but can be used as such. One bad thing about it is adjusting the mic gain down for digital use is a little tricky. It has a tendency to not change at all for most of the slider's adjustment and then it suddenly drops off very abruptly. I do routinely use mine during MARS nets, where I often go back and forth from voice to amtor and it doesn't give me that much trouble now that I've gotten used to it.

When I was first licensed I used 10 meters almost exclusively, and had a ball. The band is kinda blah right now, but I'm really looking forward to the next solar cycle when it comes roaring back to life. I had a Uniden HR-2600 that I used mobile with a CB antenna that I had trimmed down to work 10 meters. It was great fun.

I would advise against limiting yourself to only one band by buying a 10-meter only rig. One option you may want to think about is the Ten-Tec Scout, which you buy band modules for and you only need to buy the bands you want to work. (I don't own one but have heard lots of good things about them). It would be cheaper than buying a full-blown all-bander.

QST for February 1992 had an excellent article, "Getting the Most Out of Nickel-Cadmium Batteries". Your public library may have a copy if you don't.

The so-called "memory effect" is discussed at great length. Regarding discharging, the article says, "Entrepreneurship has recently brought another product class to the NiCd-accessories field: Battery _dis_chargers. _Avoid_these_at_all_costs_. (emphasis NOT added)". The "memory effect" is NOT a concern for ordinary users of NiCds (and very little of a concern for extraordinary users, e.g. geosynchronous satellites).

I've been using NiCds for quite a long time. I have NEVER intentionally discharged a NiCd to prevent "memory effect". I have NEVER experienced this effect. I've also never had to replace a NiCd. I have some that are over 10 years old, have been through hundreds of shallow and deep discharges (mostly shallow), and work just like new -- full capacity and everything. Trickle charging and avoiding deep discharges are the secrets to long life. Most of the folks I know who use rapid chargers and insist on deep discharges "to prevent memories" can't get more than a year or so of life from their NiCds.

Be kind to your NiCds. Don't "condition" them.

No, I doubt most hams would consider it that. Callbooks have always had the name and address of hams, for QSL purposes. The CD ROM callbooks added the birthdate feature, and QRZ added the rest. All the information you see is in the FCC database, which is public information, and can be downloaded by anyone from the FCC website.

Look at the bright side - if everybody knows when your birthday is, you might get a lot more cards than you use to ....

1569. Steve has REALLY lost his F-ing mind!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-24 00:00:00 UTC
From: carl@ais.net
Message-ID: <578ig4$sdo@news2.ais.net>
Source record: 212140
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Normally, I let Steve's crap slide right off, but he has really lost his mind ... Len's use of the "forbiden words" "jackboots" and "armbands" apparently have caused Steve to completely snap ... why is anyone's guess ... Len never said "nazis/facists are great" or anything similar that I saw ... I certainly never said that either ... the way *I* read Len's post using the "forbiden words," he was saying Steve was "acting like a storm trooper" by trying to force the code on everyone ... to me, it was quite clear that Len thinks nazis and fascists are despicable and his use of the "forbiden words" was intended to say that Steve and Steve's behavior are despicable ... I agree with both of those sentiments.

Steve's twisted mind has somehow twisted this into claiming that Len and I are bigots, racists, antisemites, and nazi/fascist supporters ... how absurd ... I work with blacks, jews, orientals, latinos, and even immigrants from Russia ... I am married to a latina ... if Steve were to tell them that I'm a racist, bigot, antisemite, Nazi supporter, I'm sure they'd ROFLTAO ...

Neither Len nor I have EVER said ANYTHING in these threads to "support the nazis" or "condone the holocaust" as Steve's paranoid mind now believes ...

Steve has made many outrageous and unfounded claims with regard to me .. he keeps making ridiculous assertions that my "hidden agenda" is to "commercialize the Amateur Radio Service" and that I "only want to get code testing eliminated to 'line my pockets'" ... that's absurd ...

I've been arguing for the removal of the code requirement for over 20 years and I've never made a dime off of ham radio ... I have never owned and do not now own a ham related business ... I work for a two billion dollar electronics company (that does NOT make a single piece of ham gear) ...

Steve has accused my on USENET of sending him "threatening and obscene e-mail" ... I have publicly countered by saying that I have never sent him a single piece of e-mail and if I wanted to tell him to go f--- himself I would have not quams about doing it quite publicly, rather than trying to hide behind e-mail ... (Steve has never counterd these denials ... he can't 'cause I never HAVE sent him a SINGLE piece of e-mail ... 'course he may be clever enough to try to fake something ... he claims to have written some e-mail-related software)

Steve has said lots of outrageous things to and about me ... I have called him an asshole and an idiot ... I believe him to be both because

of his behavior ...

However, Steve may have gone just a bit too far ... Steve claims to
have sent my name and address to "groups that watch Nazis and
antisemites" ... if I am contacted by or harrassed by any such
groups, or otherwise determine claim of Steve's to be true, he will find
himself slapped with a lawsuit so fast it will make his teeny-tiny head
spin ... normally I tend away from, rather than towards, the litigious
side, but Steve goes too far ... I will not tolerate MY good name being
handed to some "bigot-watch" organization ... I would not expect anyone
to put up with that sort of insult and abuse, either ...

Steve appears to me to be paranoid/delusional ... I hope he gets some
help, because I sincerely believe he needs it very badly ...

Follows the (unedited) obscene and (what I consider to be)
semi-threatening e-mails I received from Steve tonight ...
any ham lawyers out there want to make a few bucks suing his crazy ass
for slander and defamation????

fax (201) 398-5973
****
and
****
Dear Carl,

I finished reading your posts and want to thank you for expressing the
exact point of view that was predicted. As someone who obviously
condones the Holocaust, I have taken the liberty of forwarding you posts
to several groups who maintain information on other bigots such as
yourself. The closest one being a few miles from where you live.

Unfortunately, I will not be able to stop by and further discuss this
with you as I am planning to do with your life partner Lennie. Time
constraints only allow me several days on the west coast, but you never
know, maybe someday you too can buy me a cup of coffee. As always, I
take it light and sweet.

It's a shame, that you feel the way you do,condoning the senseless
slaughter of innocent people but seeing as that your
intentions of the ARS are anything but noble, it does fit the profile.
I am sure you take great pleasure in reading about the mass murders in
Bosnia nd Rwanda as well.

You should note that of ALL the messages I received concerning your pal
Lennie's posting, yours was the ONLY ONE taking a stand with him. This
alone should shows me something. I'd call it lack of character, but that
would imply that you had some to being with.

In regards to my killfile. I doubt it will backfire, as I wrote the
program myself and it does an excellent job. Copies of it are available
if you know where to look. Maybe you can add a few more simm strips to
your computer and have win95 download a copy.

I now take to task and the resolve to expose your true
agenda for the commercialization the ARS. It seems your constant
reminder that the ARS shold be absolutely technical in nature, that the
bands should be made more efficient in transmitting data and the constant
reminder of your job resume proves this. BTW, I only found 1 patent
(singular) with your name on it, not patents (plural). Maybe you shoud
learn the difference. Besides, anything developed in 1984 is
already outdated and probably been discarded.

As the saying goes, when it comes to opinionated bigots, you and your good buddy Lennie are perfect together.

Now back to the issues at hand Our next topic,

IF CARL WAS SO CONCERNED ABOUT AMATEUR RADIO, WHY IS HE HASN'T SAID THING ONE ABOUT THE UPCOMING AUCTIONS OF AMATEUR SPECTRUM???? Why is Carl so concerned about HF spectrum, when VHF+ spectrum is under attack as we type??

The answer(s) simple..

It's because he and his commercial communications company stand to benefit financially from it!!! ASK HIM..he'll deny it

PLUS...

If Carl is the great homebrewer that he professes, why has he never offered his expertise to the homebrew newsgroup. There are many people there looking for advise, yet Carl ignores them..why???

Methinks he doth protest too much

It was anonymous because it was unsigned and has a forged
(or was it accidentally deformed?) From: header line.

> How did you know who sent it?

Because it was a BAD forgery - and because you now confirmed it :-)

If you have any more questions about this, Jim, could you please
take them to email?

That's a remarkable statement. On what basis do you claim that these calls (and licenses?) `WILL' be cancelled by the FCC? And what will the ARRL have to do with it? I have not heard of any ARRL/FCC review, and I do not know what standing the ARRL has to participate in any such activity anyway.

You say that the $$ is not, nor ever was, the issue. But is there ANY issue at all? In what way are the Tucker clubs and 610V applications improper according to the FCC rules?

If you have any facts to support your amazing story, could you share them with us?

1575. New beta version of LogSat Professional is available

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-24 00:00:00 UTC
From: Roberto Franceschetti <roberto@netwide.net>
Message-ID: <01bbd9f7$98e4c6a0$068067ce@miseno.netwide.net>
Source record: 212146

LogSat Software Corporation is currently testing the pre-release of the
next version of LogSat Professional for Windows. This new version will
feature new, highly improved world maps. If you want to participate in our
beta test program, all that is required is that you download the latest
beta version from our page at http://www.logsat.com, and report any errors
you encounter during your regular use of the software to
support@logsat.com. Please be sure to inlcude a description of the problem,
along with any information useful to reproduce the error.
We also welcome any comments/suggestions on possible improvements to the
program. Examples: Do you prefer to superimpose latitude/longitude lines on
the textured maps? Do you suggest using different colors? Etc.

INSIGHT Services (Insight@cris.com) wrote:
: I was wondering if someone could help me . I am thinking of buying my
: first rig and wanted to get a 10M but I have heard lots of people say that
: 10M is really dead or hard to contact on. I was wondering what the general
: concensus was. Thanks.

10 meters was wide open this summer. I was having QSO's using FM from
Philadelphia, PA. up and down the east coast and as far west as St Louis.

One night I had a 3 way qso with someone on 440 in St. Louis and another
ham on 10m in Boston using a linked repater in St. Louis.

On the SSB side it is open during the day and near twilight on the "grey" line.
If you are on the east coast of the (U.S), you could work North into Canada
and south into Argentina and most places in between.

Some times, with a little persistance, you could work into Europe during the
day in the summer.

Note that all of this was "skip" propagation. I found that my groundwave
propagation was about 4-5 miles.

Geoff.

>> way to accomplish the rest of the setup.
>>
>> What are people's opinions of the
>> earbud-mic arrangement?

It's probably the most convenient, but also probably has the worst
sound unless you get the professional stuff which is very expensive.
There are many alternative mics/earphone arrangements on the market so
just try to see which fits best. Important factors are wind noise,
obstruction w/ helmet, convenience (no hands off the handle bar is
best), and quality of sound on both sides.

>>
>> * What is the best way to secure my HT to the bicycle? Ideally, it
>> should be easy to attach the radio to the bike and easy to remove it. Or
>> is it easier to somehow attach it to myself or my backpack?

At first I was thinking of strapping it on the handle bar so I can
control it. A friend told me that if I dropped my bike, that could
make damages to the radio. Now I think I'll put it in a bag or just
leave it on my belt or pocket.

>> * I think a simple dual-band mobile-style antenna would probably be
>> the best way to get out. My bicycle is a mountain-bike style and I can
>> easily get a
>> rack to fit over my rear wheel.

Try to find a very long dual-band handheld whip, which has to be very
soft, light weight, and flexible. Try to find a ground independent
design, or 1/2 wave on the 2m side. As the other guy said, it'll be
tough to mount the bike (I had that problem even w/ a 19" whip!!), so
if it's a BNC connector then it's just a matter of taking it off
before mounting the bike. An hand-adjustable angle mount will do if
you can find one.

>> Is there a mobile antenna mount that
>> would easily and securely attach itself to such a rack? Can anyone
>> recommend a particular antenna/mount combination?

Try to find some "mirror" mount and modify it. A trunk lid mount will
also work too. It depends on your rack a lot.

>> Anything else I should keep in mind?

Use RG-174 cable because it's very thin. My only problem w/ the setup
is that everytime I got off the bike I had to remove the antenna
cable. A fancy option is to use a crossband repeat capable handheld
on the bike, and use a small radio like the Standard C108 or C508 on
the body, and repeat via the bike radio.

The radio shack HTX-100 is a ssb/cw rig only. Just picked one up in MINT
condition at a local hamfest for $115. Very nice little rig! I recommend it.

Not entirely unexpected. After all, we live in the "I want it all for
nothing" generation. That welfare-state mentality, permeating throughout
our society. The "All Repeaters Must Be Open" cry is just another
example of 'ham-radio welfare', where people want others to pay for their
hobby.

Exactly.. But what I like about 10M is the ability to go from a great DX band to a great local band.
When it's hot it's only days for DXCC when it's quiet it's great for local SSB, CW, AM and FM conversations
without tying up repeaters.

Larry R. Johnson (larryj@teleport.com) wrote:
: Seems like lots of new hams that don't seem to understand how the
: closed/open/private systems were set up (most a long time ago.) And
: then some people who seem to think that all but free, open repeaters
: with no memberships or fees are the ONLY way that repeaters should be
: coordinated.

I take it that you're satisfied with the status quo, then?

FWIW, I don't believe that all repeaters should necessarily be open. However, this mess in southern California needs some work. Just because this was allowed to happen some years ago, doesn't mean that it's written in stone and can never be changed.

I support two closed and one open repeater in the local area; one of the closed repeaters is on 440.

The closed repeaters aren't the problem; it's the private ones.

: This thread gets started about every 7-8 months - just about as often as
: "What;s the meaning of HAM?", or the code vs. no-code debate. Fortunately,
: it will die out again soon until another new bunch of internet newbies and
: new hams come up with this new "radical new proposal" to reform how
: repeaters are done, and how it's not fair that they can't have one too....

You might review this thread, to note that not everyone here is new...

Rather than simply see this thread die (and it will reappear, trust me) why don't we work on *doing* something about this problem?

BTW: SCRRBA coordinates repeaters on *all* bands except 2m and 220 in SoCal. It's just that the problem is so glaring on 440.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: This is a coordination issue. Part 97 doesn't set down many coordination
: guidelines. This is left to the amateur operators whose stations are
: eligible to be auxiliary or repeater stations in a local or regional
: area (97.3[[20]). Those amateurs are every amateur holding a Technician,
: General, Advanced, or Extra class license in the local area or region
: (97.205[a]). (You don't have to actually own a repeater, you only have
: to be eligible to erect one, to fall into the class of persons a
: coordination body is required to represent in their decisions.)

Since this is a matter of FCC regulations, I wonder if anyone has bothered
to alert the FCC with this problem?

: The problem appears to be that some coordination bodies aren't
: being representative of or responsive to those they are required
: to serve, IE the *entire* amateur community (other than Novices)
: of the region they represent, when they give such a priority for
: amateur spectrum to restricted membership repeaters.

: What we should be addressing here is the legitimacy of coordination
: bodies who have demonstrated that they are *not* representative of
: and responsive to those they are required to serve. If SCRBBA, or
: any other coordination body, and its closed/private coordination
: policies, are not meeting the wishes of the entire amateur community
: they are required to serve, a simple ballot of no confidence by the
: general amateur community would render their coordinations null and
: void by withdrawing recognition from them as the coordinator of
: auxiliary and repeater stations for that area or region.

That's the basis of the complaint, in short. The coordination body is *not*
responsive to those hams outside its inner circle, thus is not representing
the needs of the affected amateur community, as a group.

After all, if a few hams complaining about early delivery of their vanity
applications, a problem which is not even within the control of the FCC,
can halt the vanity callsigns from being issued, this tells me that the FCC
is listening to the average ham.

Beware! There are several software problems
in the DSP-232. The software to fix them was
in beta and scheduled for shipment around
Thanksgiving. I know, I bought one about a
month ago and was looking forward to receiving
the fix. Damn! They'll be giving these things
away before the end of the year.

A very funny piece.

Instead of suing the FCC; maybe the target should be this family.
Why are they getting all the callsigns and we're NOT? Why isn't the
FCC investigating THEM?

What is the better way of balancing tubes such as 3-500Z units? Is is better to balance the standing current for a given bias (zero bias in the 3-500 units of course) or should the plate current be measured at a give RF drive for each tube? One measures the mu of the tube while the second approach measures the transconductance. Which is more practical for hams?

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind this site is still under construction and not all of them are there yet, but they soon will be. (I have Thanksgiving week off)

Gene,

I own the Grundig rig. It's really like it. It comes with it's own external antenna, but the built-in telescopic antenna works fine. It's small size makes it nice for traveling as well.

SB DX @ WW $OPDX.280
Ohio/Penn DX Bulletin No. 280

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 280
BID: $OPDX.280
November 25, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AE4AP & The DX Bulletin, N4AA & QRZ DX, W5IJU & Island/DX News, KH6BZF, DF4RD, F6AJA, G3NYY, G4BUE & DX News Sheet, JA1IDY and Japan DX News for the following DX information.

C5 GAMBIA. Babs, DL7AFS, will be active from the QTH of C53CS from December 2-15th. Activity will be only SSB.

C6A, BAHAMAS. Walt, G3NYY/C6A, and Tim, G4VXE/C6A, will be active, mainly on CW, from New Providence Island (IOTA NA-001) November 30th through December 9th. They will take part in the ARRL 160m Contest (December 6-8th). Some RTTY activity is also possible. QSL routes: G3NYY/C6A via home call; G4VXE/C6A via G3SWH. (Direct or via bureau.)

FK, NEW CALEDONIA (NEW IOTA?). Eric, FK8GM, and Eddy, FK8CR, will be active as FK5M from Matthew Island (listed on the IOTA directory without a number). They are landing by helicopter on Wednesday, December 3th, at 2000z (possibly on Tuesday evening, 0700z). They will stay there for only 24 hours. Activity will be on SSB (3790, 7075, 14195/260, 21260, 28460). They will also be on CW and RTTY on the usual DX frequencies, if it's possible due to the very short time of the operation. QSL via F6AJA.

FS, FRENCH ST. MARTIN. The "Island/DX News" reports members of the North Jersey DX Association will be on as FS/W2QM December 4-11th. They plan to be active on all bands 160-10 meters, CW, SSB and RTTY. QSL via W2QM.

HK0, SERRANA BANK (Colombia). Pedro, HK3JJH, was to be active from here this past weekend but had to postpone this operation because of bad weather. Next possible operation from IOTA NA-133 may be next December 22nd or January 1997. Pedro may also activate Roncador Key (NA-133) and Serranilla Bank (NA-132) during this same time frame. All of these operations are reportedly scheduled to last only 6 to 8 hours.

J6, ST. LUCIA. Dominique, F5RYC, will once again be active from here. Look for J28YC to be active in early December.

JD, OGASAWARA (Chichi Island, IOTA AS-031). JA operators will be active from here December 23-25th. Look for JA4GXS/JD1, JF4LNO/JD1 (a YL) and JN4AWW/JD1 to be active on 160-10 meters SSB/CW. QSL via JA4GXS. Meanwhile, "QRZ DX" reports JA8FCG will join Eiji, JQ1SUO, in operating from here December 16th through January 3rd (Refer to OPDX.270). Both will sign homecall/JD1. They plan to be active on all bands CW and SSB. QSL via respective homecall.

JT, MONGOLIA. Sur, JT1BH, in Ulan Baatar, was heard this past week on 20 meters (14008 kHz between 0900 and 1000z), 40 meters (7004 and 7007 kHz between 1051 and 1343z) and 80 meters (3505 kHz around 1415z). QSL info is needed to pass on to readers. Meanwhile, "The DX Bulletin" states Mike, NI7T, will be active next month as JT1FBT. His activity will be between 0000 and 1200z on 160-10 meters. QSL via CBA.

KH6, HAWAII. Mike, W7DRA, who has retired from Boeing recently and was active on 80 meters in last weekend's CQWW Contest as W7DRA/KH6, states he will also be active from Kaual, Hawaii, during the upcoming ARRL 160 meter Contest. Look for him on 1804, 1808, or 1843 kHz.

S7, SEYCHELLES. Paddy, S79MAD, can often be found with Randy, WX5L, at 1300z on Sundays on 14086 kHz (RTTY list operation). QSL via GW4WVO.

T9, BOSNIA-HERZEGOVINA (UPDATED by KH6BZF). Dave, T9/WA5IKQ, is located in Camp McGovern as the AT&T site engineer. His location is not far from the city of Brcko, Bosnia north of Tuzla. He is active on the SSB and CW, mostly on 80-20 meters. Dave's logs have been arriving at his QSL Manager's QTH (KH6BZF via CBA). Please SASE or SAE + IRCs for returns. Please no bureau QSLs.

UPDATE. Information reported in last week's bulletin about 70 year old Mako's (JA1OEM) trip to Suriname (PZ) and French Guiana (FY) have been updated thanks to Ted JA1IDY. Mako will be staying in these areas for a period of about 2 months starting from November 19th. Planned callsigns to be used during his stay are PZ1HP and FY/JA1OEM. Refer to OPDX.279 for more details.

XZ1N Final Update from Warren, K7WX: Dated November 24, 1996 from Yangon, MYANMAR, will be sent to all OPDX InterNet subscribers.

ZD7, ST. HELENA. The "DX News Sheet" reports Johnny, ZD7WRG, is active for the next few months on 80 and 40 meters. He is active daily at 1830z on 14240 and 21355 kHz to make LF band skeds. QSL via WA2JUN.

1613. 100's of "Ham Radio Only" Classified Ads

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-24 00:00:00 UTC
From: wb6siv@telis.org
Message-ID: <wb6siv-2411962219380001@host37.cyberg8t.com>
Source record: 212184

The Raymond Sarrio Company's Ham Radio WWW site has a very large data base of ham radio classified ads. All ads stay on-line of 30 days and are list at NO COST:

http://www.sarrio.com.

Browser/buyer information:
My free classified service allows Hams to search for equipement with the help of our new and unique search engine. The search engine allows you to search by Title and Manufacturer--no need to scroll through 100's of listing before you find that special piece of gear, nor do you need to wast time waiting for a long list of ads to be downloaded. Plus, when you find the gear your interested in, you can point-and-click to creat an e-mail access to the Ham that listed the item.

Seller information:
For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

The classified listing are purged every 30 days, no need to repeatedly repost your ads, as is often the case in rec.radio.swap, where over a 100 ads are added each day, and many of which are commerical nonhamradio items. As a result, your ads are quickly lost. Most newsgroup software programs have a default cap of only 400 to 500 listings. That's about 4 days of postings here. So when you post with us you don't have to keep coming back to repost every few days. BTW, when your month is up you will a note informing you that your posting is being purged, and if you would like to continue your post please return to the site and fill out a new form.

Give it a try, 73's Ray

1614. Coax Cable Listing

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-24 00:00:00 UTC
From: ebear@laplaza.org
Message-ID: <19961124231436770061@[10.0.2.15]>
Source record: 212185

I have a listing of all known RG type cables at
http://laplaza.org/~ebear/coaxlist.html
Got it from a packet BBS a while back. Originally posted by W7GCI
(10/30/91). The listing has RG number, impedance, max operating
voltage, outside diameter, and remarks.

Thanx to W7GCI, and also to WB5AOX for helping get it posted.

Below are most recent results. You to can participate in the survey at

http://www.sarrio.com

The question for October/November 1996:

Why Have You Not Chosen To Join The ARRL?

Less than 1/3 of all ham radio operators are members of the ARRL. The
question for this month is directed to
those of you who are not members.

From the list of possible reasons below, select the reason that best
describes why you have not chosen the join
the ARRL.

The results:

The dues are too high. |****************************** 31
Their Ham policy positions are not close to
mine.|***************************** 29
They are too closely tied to ham commercial interests. |****** 6
I was not treated well by one of their representatives.|**** 4
I just haven't gotten around to it. |******************** 20

Total votes displayed: 90

Note: The results will be forworded to the ARRL.

Err... Then I take it you have no objection to de-coordinating private
repeaters
whenever an open repeater requests a pair. And if you are decrying the
welfare
mentality, why are you taking advantage of all that "free" spectrum that
hams
have? The open repeater surely has a greater public benefit than the
closed
system

The prior band history has very little to do with whether or not a
closed
system should continue to exist. The complaint that the owners of the
system deserve to have it there because they invested the time and money
to activate the frequency cuts no ice with me. Sometimes its just too
bad,
ask the repeater owners in the old 220 to 222 MHz sub-band. Likewise,
if
I move from San Francisco to LA with my 440 rig, I get a sudden 80%
decrease
in utility. I have invested time and money in that rig, I may even have

had it before many of the LA systems were set up, but theres nothing to be
done about it. Is this fair?

Maybe, we should coordinate by rig construction date. A system can't be closed to a rig that was built prior to the repeater's construction. When
a system gets upgraded, it goes to the end of the queue for coordination.
Hey! This could get fun...

Question, Mike. How do you keep the repeater 'closed' or 'private' ? If I lived in your neighborhood, what would I have to do to use it ? Pass a CW test or just get you a date with my sister ?

Message-ID: <01bbdb00$20809040$7d94d9ce@p-100>
Source record: 211972

FS: Icom 751A & AT100

Icom 751A, 100 watt transceiver, 10 through 160 meters, General Coverage Receiver with CW filter installed, desk mike and DC power cord. The radio has never been mobile. The optional internal power supply is not installed $650.00.

Icom AT100 matching external automatic antenna tuner with control cable to connect to a Icom Radio $225.00.

The units are in very good condition, I guess they could be classified as near mint, with manuals, however I don't have the original boxes.

Sell both for $850.00

Prices include shipping.

>really fair and why they put the program on hold is beyond me.

It seemed kinda obvious, after looking at the different types of deliveries offered. I went to my local Post Office on Saturday September 21 and mailed it for next day delivery. By going on Saturday, there was absolutely no chance it would have gotten delivered on Friday. For $10.75 for next day delivery, it seemed worth it. I could have taken two day delivery from the PO or UPS or whatever, but the guarantee is for no more than two days, they could deliver it in less. As it turns out, it got delivered on Sunday, which was acceptable to both me and FCC. In the past, I have paid for two or three day UPS service and received packages overnight. It is not so much the problem with the carrier, it is the person buying the service. Let's get on with the rest of the call sign assignments.

They haven't violated any rules. Just abused a poorly installed system.
I think that's what I was trying to point out originally.

>There is no requirement that someone who applies for a US callsign
>ever visits the USA. If you believe that this situation is wrong and
>you really care about it, why not propose a rule change instead of
>slandering the Commission staff by alleging impure motives?

That's correct. The only thing the FCC requires is certification of passing
the required tests, and a correctly filled out 610 form with a U.S. address.
Out of curiousity a few years back, we did bring it up to the FCC. They said
they don't care. As long as the 610 form has a U.S. address on it, the FCC said
they could care less who or where the applicant really is.

But then why would anyone who never visited U.S. soil or intends to visit want
or need a U.S. license ? We could only come up with two reasons: 1. Souvenir,
more calls for the bottom of a QSL card. 2. So they could obtain reciprocal
operating privledges in countries that have agreements with the U.S. and
don't have agreements with the countries they are really from, which is the
primary reason why so many U.S. calls are issued to hams in Japan.
Maybe there are more reasons, but the guys at the ham club here couldn't figure
out what they were. But we are open to suggestions.

>The FCC employees that you are attacking have no role in rule making
>and are charged with enforcing only the rules that really do exist

> tgold@microvst.demon.co.uk
> packet: g3skr@n0ary.#nocal.ca.usa.na

I'm not attacking the FCC, Tony. You are defending them. Why, I don't
know. But we had better stop talking about this in the newsgroup, as the
'vanity calamity' boys are already upset enuff about not getting the callsign
they wanted. We don't want to start them running all around the world trying to
get back all the 1x2 U.S. souvenir calls the FCC has issued, now do we ?

Personally, I think the old system worked fine. Take a test, get a callsign. Live with it. But obviously, some people wouldn't agree with that. One thing refreshing about the new system anyway, at least the FCC is reissuing unused calls now. So the next aspiring Guamanian kid who makes it to extra class will only have to wait until someone dies to get an extra class Guam call. That is, if someone in Italy doesn't get it first for a souvenir. I guess as long as there is a system, there will be people who figure out how to beat it.

> privacy violation .

The information on your license is esentially "public record" so it is
not really a "violation". But it is something that should be considered
when you fill out your 610.

If you have a legitimate mailing address that is different from your
home address you hould consider using it. If you get mail at work, you
might consider using that one. Protecting your privacy to whatever
extent you feel necessary, is on you.

QRZ is giving lat/long coordinates for a P.O. Box 10 miles from my house
in my listing - so you can get an accurate azimuth.

Regards

: One reason I keep my repeater "closed" is I do not want to hear the
: words

: "I paid $25 to sponsor this repeater. Its my RIGHT to use it."

On first reading, I would have thought that exactly the opposite was true. Now, I think I get your meaning. We have one nearby club that includes the use of one high-level and one low-level repeater as part of the club dues. And, both repeaters are listed as "open" at the same time. I'd be interested to see how many problems they have.

OTOH, our club "sponsors" an open repeater, which is independently owned. The "Repeater Organization" body asks for a $10 annual contribution. Thus, it is not sponsored financially by club funds. Incidentally, until we started getting intermod from a commercial station on the same site, this was one of the best 2-meter repeaters in this part of SoCal.

: For several years I was a board member and general officer of
: Rhode Island's largest ham radio club. The organization became
: ineffectual at dealing with any problems whatsoever, including "base"
: members monopolizing the repeater for hours on end without allowing
: other mobile stations to use it.

I'm considering withdrawal of my support of an excellent 220/440 system I belong to, for this same reason. There are three or four hams who are constantly on this repeater system, and it gets annoying after a while. It's pretty obvious that they're going base-to-base in order to avoid long distance charges.

: My point is this: There are many good reasons for not wanting to
: "open" up a repeater. For one thing it makes problems easier to deal
: with. Yes, technically if a repeater is "open" or "closed" the
: trustee's regulatory privileges remain the same. However, it is
: exceedingly frustrating to deal with people who are morons and cannot
: comprehend basic English.

Again, I agree totally with the concept of closed (not private) repeaters.

Jim,

The problem is elsewhere also. Try looking in the repeater directory for
the number of repeated calls! One of the local "Amateur" repeater owners
notes that he has some 14-15 repeaters, and serves on the coordinating
bodies (SCRUBBA). Tell me that that is purely coincidental! He charges
~$200 per year for membership. To me, if we are worried about the giving
of the bands to commerical interests, it is already too late. At least

around Southern California!

Susan,

Because of the current low crop of freckles on the sun (also known as
sunspots!), 10 meters is pretty quiet. That's the bad news.

Here's some good news: That condition means that used 10M rigs
may be available cheap.

And here's even better news: We currently are at the lowest point
in the "11 year sunspot cycle", so conditions will rapidly be improving.
10M will be getting HOT, and when 10M works, there is no band that
is more fun.

MD, you're wrong! sorry no other way to say it. If a person puts up a
repeater
they must assume the burden of ALL the law including non-interference.
and If
a repeater is 'closed and private' then as far as I can see, the input
or output
is certainly eligible for simplex work or for an OPEN repeater to be
assigned.
The jammer should be brought to account individual or repeater owner,
whichever jammed.
Just because the repeater 'can't easily' QSY, is tough and one of the
problems of the
repeater owner.

Hello DSP freaks

I have just purchased the EZ-KIT lite from Analog Device (ADSP2181 and AD1847). The EZ-KIT contains the source code for four FIR filters (FIRDEMO.DSP), but I do not know how to calculate the equiation weights or what ever it is in the four files fir1.dat, fir2.dat, fir3.dat and fir 4.dat (containing a lot of hex-digits). Do enybody know how to do?

Do you further more know how to build notch filters - the equiation...

Any source code for solving the above will be pleased...

Yours faithfully

Bjarke Korsgaard

I have a better idea. why not 'coordinate' all the 'closed and private'
repeaters to **one** pair in each band? with their various 'closing'
schemes *and* their relative lack of activity, they should cause no
interferance with the rest of us and we (of course) would not interfere
with them.

Gang:

From what I understand the courrier in this case was FedEx. These people sent it Second Day service but apparently the load of First Day premium service must have been light and so the Second Day stuff was delivered the next day, which is often the case. I used USPS, mailed it Friday afternoon so it had three days to be delivered in order to qualify as part of Day One. It was a no-brainer and it worked! I got the second call on my list.

I am sorry for the poor guys and gals waiting for the Day Two processing. I only hope the FCC doesn't blow the whole program off as a nuisence!

This will have to happen eventually, unless SCRRBA sees the writing on the wall. Any organization that thumbs its nose at the entire ham community can't expect ARRL and other established groups to blindly endorse them forever.

There is already at least one other coordinating body doing coordination on 440 in Southern California. If they are to replace SCRRBA, they will have to get to work on some P.R. Establishing a new coordinator has to be more than just a quick "Throw the rascals out" move. The new group has to be all the things SCRRBA is NOT. It will have to be accessible, public and fair. I'd like to hear some concrete proposals. There should be some effort at dealing fairly with those owners of repeaters who have indeed spent a lot of $$ already. Being coordinated on a frequency must carry with it some responsibility as well as privilege.

Hallo!

I have a question.
Since 3 month I am owner of a second hand KENWOOD TS-930s ant it works good,
but there is something that confused me, I have no transmitting in AM-mode.
If I aktivate the ptt in AM-mode there will not be any output and the received
signal in the speaker will not stopps. I can clearly hear the raelay is
switching good but nothing is happend.
What is wrong ????

This should be real simple to solve.

Check the Secretary of State's office in CA to see if these
"clubs" have been officially registered with the state. If
they haven't, they have no legal standing. The Tuckers might
be, in that instance, guilty of fraud.

And I too just now received an update in the mail. EPROM, not EEPROM. Parts are labeled "AEA V1.0 L31". Level 31? Instructions dated 10/24/96 say "This upgrade enhances your DSP-232;s ability to function in Amtor, Pactor, 9600 bps Packet and 9600 pbs KISS mode."

Just thinking, if AEA can't find a buyer for their intellectual property, it sure would be nice if they'd post the source code to the DSP-232. One of the reasons I purchased a DSP-232 was that it has a very powerfull CPU (MC68340) that can be programmed with free tools (gcc and gdb), and AEA's advertising copy showed a picture of their PCB including the jack for connecting Motorola's Background Debugging Mode. Alas, haven't had time to play with these toys.

Well I guess I should apologize. I received my new firmware
today. The package was postmarked 12/21 and the software had
a date of 12/6. I installed it and noticed the signal analysis
still seem to have a problem. I'll take what I have (many new
modems) and put up with the minor things. Whew, I thought I
was screwed. Thanks AEA!!!!!! Hopefully they will not go the
way of Lafayette, Heathkit, and the real Radio Shack.

Now that's kinda a dumb answer. Welfare state mentality indeed.
I personally agree with the OPEN repeater advocates. But in any area
where I've lived I always tried to join the groups of the repeaters
I used most. However I am not opposed to controlled repeaters in this
sense... If they have a patch or other features, then I think it's
reasonable to restrict those features to members.
But to just occupy a frequency pair for a small circle of friends
allowing no one else to use it and have a one or two percent usage
is at least unethical.

The Tuckers are getting callsigns because the rules allow it.
The Tuckers are not being investigated (AFAIK) because they
haven't broken the rules.

If you want to get some club callsigns, find a friend, write a
document of organization, and fill out the 610Bs to get the
club callsigns. Then you can fill out 610Vs to get vanity
calls for your club.

ARLP049 Propagation de KT7H

ZCZC AP69
QST de W1AW
Propagation Forecast Bulletin 49 ARLP049
From Tad Cook, KT7H
Seattle, WA November 25, 1996
To all radio amateurs

SB PROP ARL ARLP049
ARLP049 Propagation de KT7H

This is a special propagation bulletin.

The recent rise in solar flux continued over the weekend to an unexpected level. On Sunday WWV reported that the solar flux was 100, a level which we have not seen since September, 1994.

In ARLP049 I asked if the recent rise might be the end of the doldrums and the start of significant activity in Cycle 23. I'm not certain, but I believe the areas that are causing all the activity are near the Sun's equator, which suggests that they might be some improbable last gasp from the previous cycle.

The flux numbers given in this weekly bulletin are always the noon measurements from the Penticton, BC observatory, but there are actually three per day. Below is a table of each flux value for every day since the last bulletin:

11/21/96 1800 UTC: 74.2
11/21/96 2000 UTC: 74.4
11/21/96 2200 UTC: 75.5

11/22/96 1800 UTC: 79.5
11/22/96 2000 UTC: 82.6
11/22/96 2200 UTC: 82.3

11/23/96 2200 UTC: 95.0
11/23/96 2000 UTC: 91.0
11/23/96 1800 UTC: 90.6

11/24/96 1800 UTC: 103.5
11/24/96 2000 UTC: 99.8
11/24/96 2200 UTC: 104.2

11/25/96 1800 UTC: 103.6

The latest forecast from NOAA SESC is for a flux around 105 for November 25.

Thanks to Cary Oler for the above data. Cary has a very interesting and informative web page with solar data and current solar images at http://holly.cc.uleth.ca/solar/index.html

>SC MacKenzie N6HAC

I don't use the stock microphone, but am otherwise happy with mine! I have worked Japan and the East Coast from Oregon (both mobile and fixed) and it does a bang-up job for the price! I haven't gotten so much bang-for-the-buck out of a new radio out of anything else! I use mine with a Larsen 10 mobile mag-mount, Cushcraft AR-10 vertical or the Antron A-99 fibreglas vertical when I need to "pack-it-in" (like vacations or field ops).

However, if you have a General Class ticket or higher and want to use 10 meter FM repeaters, the HR-2510 can't do repeater offsets out of the box, and must be modified with a "Chipswitch" replacement microprocessor to get this feature.

The HR-2600 (no longer made, I think) had the repeater offset feature.

This is very similar to the mounting method that cycle couriers use here for their radios. I stick my ht in a pocket in the side of my bag at the moment with a 5/8-1/4 antenna on it. A gellcell in the back adds some omph!

>I do not like the little bug speaker/mic that fits into your ear. I

I am still looking for a headset that fits comfortably under my helmet (which are required by law in NZ; not wearing one can cost $80 and is stupid to boot!). I have had limited success with a throat mike and earpiece. I made an extended PTT that was attached to the handle bars.

>I am lead to believe that you need an external antenna on your bike
>and the rubber duck would not reach out the way you wanted. I have

I have made a mount that bolts onto the bike frame down at the rear axel (since the frame is rather tough there). I have a 5/8 that I want to try, but as some people have suggested, a 1/2 may be better.

I'm also interested in one, but not for a while money wise. It's an incredible charger. It's a rapid charger, but it takes cups for radios, so you buy one charger for $70-$90 (going rate for a rapid charger) and you buy cups for $20-$40, and you can for $160 or so have 4 or 5 chargers! You just swap cups. They also make for $500-$600 a 6 slot gang charger, can charge any 6 batteries in 1 hour total.. I dunno about their quality, but I've heard nothing but good things. Plus, for about $50, you can add an analyzer I think, shows the batt's capacity, how the nicads are, etc..

Recently, A message was posted about the TH-79A(D) and 800Mhz. One person said that 9 UHF parts were missing from the radio and that they were worth about $14.00. I have not been able to contact him via e-mail due to a problem with Worldnet's mail server. Can anyone tell me which parts they are, where to get them etc ...?

I was always under the impression that the radio's logic prevented reception not the actual parts on-board.

Thanks again,
CJ <midnight@us.net>

>a consequence of Bart's explanation of the FCC all allocation system.

I found out about the "lottery" aspect very late in the game (about a
week before D-Day) and had already arranged for hand delivery. At first
I was disturbed that I had paid extra for a service I didn't really need,
but now I think it was money well spent.
I was SURE that my app got delivered according to the rules and I got my
No. 1 choice. I *really* wanted a 1x2 and have always regretted missing
the "window" in the mid-70s. This was an opportunity to get a 1x2, and who
know how long these rules will remain in effect (with this turmoil, I
wouldn't be surprised if the FCC shuts down the vanity system again). So I
spent a few bucks extra to enhance my chance. You only live once. :-)

I hope that all the WIPS and other vanity applications are acted upon
quickly... I'm sure it must be frustrating. I also hope a new rule is
instituted requiring all clubs to chose only *ONE* call, which will free up
a few more choice calls for other people.

We should not take it lightly, but we should consider taking it,
especially for some of the repeaters that serve extremely small groups
that do not accept new members.

> One could just as easily ask
>that those wanting open repeaters go and establish them on 222 MHz,

In much of California, 222 is full. 440 is full even though nearly all
simplex frequencies were turned into repeater pairs. 902 seems to be
full of Metrocom. 1.2 is filling up fast, at least on paper.

Commercial gear for 1.2 (and 222) seems to be
disappearing from the market at an alarming rate.

Anyone got a good homebrew design for a 13cm handheld?

Probably same reason as they are not investigating the hundreds of callsigns
issued to people who have never been in the U.S. and never will be. Because
they don't care, and because the system is so poorly designed that people
easily take advantage of it.

Sam, I'll second that. Ten meters is a bit slow now, but there are still
openings. In 1990 I worked 2097 stations on ten meters, in 93 different
countries - all in the same weekend. So when ten meters works, it works
very well.

>>Yeah, but having a coordinated closed/private repeater, you are
>>basically claiming rights to TWO OPEN AMATEUR FREQUENCIES.

>This is not what coordination grants you. Re-read 97-205.

Coordination status requires that the non-coordinated party involved
in any interference between two repeaters has "primary responsibility"
for resolving
the interference.

Assuming that the closed repeater has coordination status, this
clearly does not absolve the closed repeater operator from
responsibility. Otherwise the language would have
said "total responsibility".

Given that both parties have some responsibility (albeit
unequal), if the non-coordination party makes a good faith
effort to resolve the interference, (such as suggesting cooperative
plans and efforts to minimize interference) while
the closed repeater operator does nothing (such as
not cooperating or ignoring suggestions), then the
closed repeater operator would be in violation of
97.101 (a) (d) based on the fact that he/she ignored the
implicit secondary responsibility established in 97.205(c).

Note that 97.205 does not address interference between
a simplex operator and a repeater user on the input frequency of a
closed repeater. It only addresses interference between two
repeaters.

In the case of interference between two operators on the input
of a closed repeater, the issue must be decided by 97.101(b)

"Each station licensee and each control operator must cooperate in
selecting transmitting channels and in making the most effective use
of the amateur service frequencies. No frequency will be assigned for
the exclusive use of any station."

It appears that closed repeater operators use the following practice:
"I own the frequency, but I'll lease it out to you for free when I'm
not around". An argument could be made that this violates 97.101
(a)(d).

Surprisingly, it doesn't violate 97.101(b) because 97.101(b) outlaws "Exclusivity", not "Ownership". A person can "own" a frequency without using it "exclusively". One could argue that an owner can always require exlusivity, but in this case, you could think of it as a "restrictive ownership". On the other side of the coin, one could argue that the default priority given to repeater communications amounts to de-facto exclusivity. I can see valid aguments on both sides.

In the end, my view is whoever starts the QSO first has priority, and if this is ignored, it violates 97.101(d).

>matter of choice rather than necessity whether or not it is open.

One reason I keep my repeater "closed" is I do not want to hear the
words

"I paid $25 to sponsor this repeater. Its my RIGHT to use it."

For several years I was a board member and general officer of
Rhode Island's largest ham radio club. The organization became
ineffectual at dealing with any problems whatsoever, including "base"
members monopolizing the repeater for hours on end without allowing
other mobile stations to use it.

The rallying cry of those ill-mannered hams who were inconsiderate
of others: "I paid my $20. I bought the right to use the repeater
whenever and however I want."

Now, you and I know this is a bunch of BS, but the other morons who
were in the club couldn't realize this, and refused to grow a serious
set of cahonas to deal with the problem the way they should.

So, the last I knew, membership in the club was down from an all-time
high of roughly 350 members to 150 members as of a year ago, when I
let my membership lapse in disgust.

My point is this: There are many good reasons for not wanting to
"open" up a repeater. For one thing it makes problems easier to deal
with. Yes, technically if a repeater is "open" or "closed" the
trustee's regulatory privileges remain the same. However, it is
exceedingly frustrating to deal with people who are morons and cannot
comprehend basic English.

>In my view, coordination bodies must actively pursue the issue of
>"sufficient activity" as a justification for continued coordination or

>else the credibility and the ability of such organizations to manage

A spectrum management organization is in no position to determine
what constitutes "sufficient use".

>Without
>responsible oversight, the practice of coordinating an entire band to
>closed repeaters can be likened to closing the State and National Parks
>for private parties.

Which, as long as you obtain your permit and pay the appropriate fee,
is perfectly legal.

Unfortunately, this rule cannot apply to repeater stations. Repeaters
cannot move easily. They cannot determine if the person keying up
on the simplex frequency is doing so because they intend to have a
simplex QSO with another party, or if they intend to use the repeater
(assuming of course no PL in either case.) This is why it is generally
considered "bad amateur practice" to operate on a repeater's input or
output.

Luckily the USA isn't Russia. We don't have to necessarily have
government control for a "public good".

>The prior band history has very little to do with whether or not a closed
>system should continue to exist. The complaint that the owners of the
>system deserve to have it there because they invested the time and money
>to activate the frequency cuts no ice with me. Sometimes its just too bad
>ask the repeater owners in the old 220 to 222 MHz sub-band.

In the case of 220, we had a regulatory decision to cut a section of
the band away. Relocating a repeater to a new frequency pair in 220
is not a difficult thing to do, merely an annoyance as you re-tune
your duplexer and change crystals or VFO on the repeater itself and
re-tune it. Activities which, given the correct equipment, might take
you an afternoon of work.

This is a far cry from booting people off entirely just because you're
not a member of the "in" crowd, which is what the argument really
boils down to. Its another case of the "have-nots" wanting to take
away from the "haves"

>Likewise, if
>I move from San Francisco to LA with my 440 rig, I get a sudden 80%
>decrease
>in utility. I have invested time and money in that rig, I may even have
>had it before many of the LA systems were set up, but theres nothing to be
>done about it. Is this fair?

Yes. If you move to Brazil you might find your investment totally
unusable. What's your point? Its your responsibility to investigate
the operating situation and then weigh the potential loss of ability
to perform an activity you enjoy against the other benefits of moving
into the area. It is not my or the government's responsibility to coddle
you and make you happy.

When looking for the cause of an effect, Jim, why not first try the
most likely first before shooting for one that is less probable?

Sure, the reason may because the FCC doesn't care. Or it could be
because aliens have abducted them and made them all mad. But I would
suggest a more probably reason that the FCC don't investigate the
Tuckers or these hundreds of people you now complain about is because
none of them appear to have violated any FCC rule.

There is no requirement that someone who applies for a US callsign
ever visits the USA. If you believe that this situation is wrong and
you really care about it, why not propose a rule change instead of
slandering the Commission staff by alleging impure motives?

The FCC employees that you are attacking have no role in rule making
and are charged with enforcing only the rules that really do exist
and not the ones that you only wish did exist.

In my opinion, the only reason the FCC is even concidering these
requests
is because the courier was the USPS. Just looking out for the postal
service, ya know. Because we wouldn't want to let people know that if
you
want something delivered correctly you shouldn't use the USPS. Just
another government run agency that would be better off if it was
privatized.

Tom - K1TJ
Oh yeah, I got this on Gate 2/day 1 because I DIDN'T use the USPS.

The USPS came through for me too. I mailed mine in from up here in the sticks of VT on Friday and it was delivered at 11:00 AM Saturday. The poor guys who trusted the courier (I believe it was FedEx Second Day servive) should have too. The three day window was big enough to make this exercise a no-brainer!

The real question is what about Day Two applicants? They're waiting and don't deserve to be penalized because of the problem between the courier and its customers. How many applicants are we talking about here?

The FCC doesn't care about the callsigns as we do - its decent enough of them to reverse their 20-year-old policy against giving out "special" calls. If there's too much BS over this it is entirely possible that some FCC administrator will conclude that it isn't worth the hassles and problems and shit-can the whole program.

yes, there is one there too. I pointed out the .300 frequency because
it is not in the "regular FM part" of the band. Shoulda explained
that...;-)

> also if one is making a typical
> 6 meter ssb contact on 50.125 (read short)i do not think one should
> qsy.

Agreed. But if the band is busy, QSY can help. A station that "parks it"
on .125 during an opening is potentially locking out others from also

enjoying the opening. Also, extended QSOs on .125 lock out others from random CQ contacts with other local stations.

(by the way, during an opening, calling CQ at .130 or so can be very profitable!-)

1687. Does DAYTON seem a bit more expen$ive this year??????

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-26 00:00:00 UTC
From: Frank Tompkins <frank@uakron.edu>
Message-ID: <329B897C.63AA@uakron.edu>
Source record: 211763

Just got my application for a space at Dayton for 1997. The 2 space cost seems to be up from $60.00 last year to $110.00 this year. That increase, combined with what seemed to be poor attendance last year (is this just my perception, or did others notice this also) means I probobly won't be selling next year.

Have the powers that be tried to justify/explain the cost increase and/or why attendance in the flea market area seemed down last year??? Maybe the change to May. . ? ? ? Anyone have thoughts on this?

Is there another Hamfest in the Ohio, Ind, Pa, Wva, etc area of comperable size I should consider attending??

Thanks!

- Frank

Frank Tompkins <frank@uakron.edu> wrote:

>Have the powers that be tried to justify/explain the cost increase

I know someone who is a member of the sponsoring club. Based on my conversations with him, I believe that the purpose of the Dayton Hamfest is to make a LOT of money for the club and its most fortunate members. If you knew how ALL the money was being spent, you might well be amazed, and might not want to support some habits that may be in existence.

The Shelby, North Carolina hamfest is quite large (about a third the size of Dayton), and for the price of an admission ticket ($5.00), you also get a flea market space.

The pricing of flea market spaces at Dayton is a function of supply and demand. If attendance drops in half, I dare say the price of the spaces will do the same. Vote with your feet, and the message will get through.

Set the standing current (no drive) in each tube to be the
same (adjust bias). Apply drive, and adjust the drive level(s)
to each tube to get the same plate current.

If you are really pedantic, now try halving the drive. If there
is a large difference in plate current, replace the lower reading
tube.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.antenna

I am not so fortunate to be able to cycle every day, but I have done it
often enough to make these suggestions:

Get a J-Pole antennna. I only operate 2 meters, but there
are dual band versions. Unlike 1/4 wave antennas, a J-Pole does
not depend on any ground plane. Unlike a half-wave, the feed
is at the bottom. Mine is made from 1/4 inch al rod. So I put
a pennant on the top and it looks like a bike flag. I have compared
notes with other cycling hams and all agreed on the J-Pole.

I tried using the head set made by Kenwood for my HT, but it
did not fit well under my helmet. Actually it doesn't fit all
that well on my head without a helmet either, but ...

So I went to one of the earbud mikes. I sewed a piece of velcro to
the straps on the helmet to hold the mike pick up. So I put the helmet
on. Put the ear piece in, press down the velcro, and it is very secure.
Then I thread the wires inside my jersey so it is not flapping around.
My earpiece has a PTT switch which winds up near my waist and can be
locked in the "T" position. There is also a VOX position, but I only
use it when stopped or riding slowly. Besides the obvious problem with
breathing, all other 2 meter ops use PTT so VOX tends to confuse them.

I have tried carrying the HT in the pockets on the back of my jersey, and in
various packs on the bike. I would like to try a handle bar bag because
it might be arranged so you can see the radio while riding. The display
often has something useful, like frequency or low -battery. :-)

In article <gregE1A1LA.G57@netcom.com>, Greg Bullough <greg@netcom.com> wrote:

[excerpt]

>And it isn't a problem of crowding; there were more of us active then!

Depends what you mean by crowding. If you mean numbers of amateurs
out there, then maybe. But.... If we are talking about the specific
problem with the 440 band in So Calif, then there is a crowding problem,
if you want to call it that. Too many people with little repeaters
and great big egos, sitting there going Nyaaa, Nyaaa, Nyaaa, I was
here first, I got mine, you scumbags go away!

>I remember, when studying for and first getting my ticket in the
>70's, how kindly and generously I was treated by each and every ham
>I encountered. That was on 20 meters, on repeaters, at club meetings,
>everywhere.

I think those guys are still around. They just don't need all that
hassle of dealing with another sort of ham. Until the last year, I
had never run into such a cynical and dishonest bunch as the folks
who decided to boot a legitimate, coordinated 440 repeater off the
air and take their frequency for their closed, private, autopatch
network.

The second shock was to find out that SCRRBA, the "recognized"
coordination body, was behind them 100%.

The third awakening was to find out that the FCC does not want
hear about it. That is probably an economic issue. It's up
to the amateur community to collectively say "enough".

>the control codes!

If she looked like Liv Tyler, I'd be on MTV, not on UseNet typing with
you. Sorry. Anyway, thanks for the explanation. The 'closed' or 'private'
repeaters I remember from back in the states had a different system -
they just ignored anyone they didn't want to talk to. I found most repeater
groups to be very unfriendly people - even the club I belonged to. I seem
to remember the primary attraction to repeaters was a) the autopatch and
b) something to do while driving to/from the office. I guess cell phones have
canceled a.

We had a repeater here at one time that was sort of private - the individual
who owned it was an ambulance chaser and it was his 2 meter cell phone.
After years of discussions, he never would let anyone else use the autopatch,
even though we stressed to him many times it could save someones life
in the middle of the night. But he never gave in. Sad, really, as he was the
ARRL ARES coordinator and the RACES coordinator for Guam.

I'll bet they get a lot of self satisfaction from using someone else's
QSL cards....

I'm sure some will slip through the system, but the ARRL is sure to plug
the leak.

1700. Q: Using Database For Logging

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-26 00:00:00 UTC
From: n4jvp@ix.netcom.com
Message-ID: <329a582f.8095921@nntp.netcruiser>
Source record: 212016

Hello

I have been doing some ODBC using Visual C++ and thought a good demo would be a VC++ front end (GUI) for a database used for logging purposes. Doing the interface will not be very difficult for me but deciding about tables and keys is another story. I am not a database designer and would appreciate any suggestions pertaining to creating the database tables and respective rows. I will probably be using MS Access to create a .mdb file.

If you think R & L did something wrong by putting something on sale to
get rid of it, you are probably pissed off at the produce guy in your local
grocery store most of the time too. R & L always had good prices, in my book.
But you go right ahead and get even with them by paying more for something
somewhere else. That will really piss 'em off........

I understand what you are saying, but I still see it differently.
From where I sit I believe that all of your complaints (Tuckers and
aliens) are about the rules themselves and not about any system which
the FCC has installed poorly.

I have seen complaints about the FCC installed system itself relating
to amigiguous plans for handling (first-come-first-derved versus
lottery), slow processing of the WIP's and inordinate delay in
processing Day 2 submissions, etc. But yours complaints all seem to
be about policy which is has been made in a democratic and political
manner and not administrative, if you understand that distinction.

As I suggested before, if you don't like the rules, then you have as
much right as anyone else to petition for changes. But don't blame
the civil servants for running the machinery that executes correctly
the policies that you oppose.

> But then why would anyone who never visited U.S. soil or intends to visit want

> Maybe there are more reasons, but the guys at the ham club here couldn't figure
> out what they were. But we are open to suggestions.

No, your list seems quite complete to me. I believe that in regards
to the UK, a further attraction is that the US exams are far more
accessible than out own. The UK exams are only twice per year,
expensive and the results arrive months later. Also the UK licensing
body will issue a reciprocal license with 1) a full permanent local
callsign, 2) grant one to a UK citizen and 3) award full UK operating

privileges with such a reciprocal licence, and these are all quite unlike the FCC's analogous rules on those same three points. So a US license does offer a convenient licensing route over here.

I only discovered this 30 years too late to be of use to me :-)

Which FCC rule requires that a club be registered in California or
anywhere else? Do individuals also need to register before applying?

Also, the FCC Form 610V didn't ask whether the applicant was
registered anywhere, so what possible action was fraudulent, if it
could not be one of making a false claim of such a registration?

:
: I have made a mount that bolts onto the bike frame down at the rear axel
: (since the frame is rather tough there). I have a 5/8 that I want to try, but
: as some people have suggested, a 1/2 may be better.
:
:
: Dave, ZL3TDI
:

I have modified a 2 inch speaker from a cellular phone hands free kit,
added a ptt button in one corner that I can push with my thumb. It is
mounted on the left handlebar. The 2m ht fits in a small triangular bag
on the front centre of the handle bars. The antenna is a thin steel 1/4
whip on a rear carrier (sometimes, at others it is just the rubber

ducky). The mic is an electret from a car phone, the cord is fed through a length of brass tubing cut from the 1/8inch dia semi-rigid coax.

The tube was soldered to a small pad of pcb about 1" square. This is the boom mic and it fits to the side of the helmet with a patch of velcro, it comes unstuck if I come unstuck. That mic cord goes down to the ptt on the speaker box and then to the radio. It works nicely, the mic gets very little wind noise, is hands free and the radio is in front where I can see it.

When traveling the NJ Turnpike try using the Cream Ridge - Manchester Users Group Repeater on 147.240 MHZ - 131.8 PL

This repeater covers most of central New Jersey. You will be able to work it from just north of Exit 2 on through Exit 13 as you swing towards the exits to New York City. Cream Ridge is located in the center of the state along I-195 at exit 11 near the Six Flags Great Adventure Amusement Park. Coverage is available to the shore area but our 2nd repeater at Manchester does a better job of the shore and Atlantic City area.

Our Manchester sister repeater is on 145.110 MHZ - 131.8 PL also.

I had a DSP-232 for about a week. One of the main problems was a birdie at 145.085-145.105. This is right in the middle of the local packet bbs area. With a cable connected to the 232 my ht picked up this birdie from 35 feet away (s9). The case by itself tx's up th 5 feet away. I checked the unit for proper grounding, and found no problem areas. I tryed to use the unit for 9600 sat work and was only able to get a weak signal from KO-23. I took my 232 back to HRO for an exchange, thinking that I must have gotten a defective unit, but the one the shelf did the same thing. On the way to HRO I talked to two people both returned their DSP-232's for a refund. Knowing the state of AEA, (I called late last week for tech help. The recorded message said the company was being 'bought' and any tech problems or servive warrenty work needed, call ARRL in about a month). I was very lucky to get my money back. I now plan on buying a TAPR DSP93 kit.

Although I whole-heartedly agree with your sentiment about privatizing USPS and eliminating their monopoly on first-class mail delivery, I must offer my testimony.

I put my 610V and 159 in an plain envelope, popped a first class stamp on it, and dropped it in a USPS mailbox on Thursday afternoon, figuring it would have a good shot at day 1, 2, or 3. To my suprise and elation, I got my day 1 vanity call, all *because* of the USPS delivering it in a timely fashion.

(Of course, it takes 3 days to get a letter from CO to PA, just like it takes 3 days to get a letter from CO to KS. Go figure...)

since when is incorporation required for application for a club station license? I can think of two situations locally that have club stations and people in the club and they do stuff occasionally, and neither will be "incorporated" since there's no money needed for anything. there's a structure for the organization but that's all that's needed to have a club.

yes, clubs can be about more than paying dues...

and again, since when do you have to have incorporation to be a real amateur radio club....the bowling leagues i'm in are sanctioned by ABC/WIBC but they're not incorporated with the state.

what about a school club?

what about a club supporting a red cross chapter?

what about a club attached to one of the shrine groups?

there's three groups just off hand that i would think would not benefit from the added over head of having to be "official" with the state (and the feds since the state will want an IRS EIN number...)

This is why you shouldn't be telling all your buds on the local repeater you just bought $17,327 worth of new stereo gear and you are going on vacation for the next 3 months. While the info may be a little easier to get on QRZ, it has always been available in the callbook, which is available mailorder or at many ham stores. I once heard a Secret Service agent say his job was multiple times easier to investigate someone if they were a Ham or CB operator, in just a few days he could have a very accurate picture of the person and their habits. Be careful what you say on the repeaters, that information tied with your address could be very costly. A $99 uniden scanner will get you a wealth of information on your neighbors, baby monitors, cordless phones, 2 meter, etc.

Reminds me of a cartoon when answering machines were beginning to get popular, the guy was recording a message that he was out, but his wife told him not to say he was out, that would tell people the house was vacant, he changed the message to say, "I'm sorry, I am either cleaning my AK47, training my attack doberman, or sharpening my bayonetts, please leave a message.

To give credit I believe the cartoon was "Scotty", in the Houston Post many years ago.

>"90% of all statistics are made up"

I'm always trying to get kids interested in Ham radio, I have shown
them HF, sideband, they complain it sounds funny, grandads CB works
better, on the 2 meter HT's they show some interest but not much, they
have cordless phones and RS 49 MHz talkies themselves.

Last week in Sunday School (5th & 6th) I was talking about learning, I
brought in a CPO and key, they were messmerized, several of the boys
want to learn morse code now, and interested in radio, this is
something different for them, plus I'm sure they will use it as a
"secret code" between them, funny, but it probably is becoming a more
secret code now than 20 years ago.

I made up several CPO's with a couple of 2n2222 and the hacksaw blade
key in QST a few years ago, I have told them I will help them learn the
code, we will see how it goes, but at least it got their interest
whereas nothing else has.

I enjoy the code, so why do you make fun of me, I also enjoy music written over a hundred years ago, does this make me stupid? I enjoy fixing up and using antique radio's, and restoring old british cars (OK maybe the last does show a bit of stupidity), but why should anyone judge me on my tastes, let me enjoy the code, you can think I'm stupid, but you have no reason to post here that we who use the code are stupid or backwards. I used to think people working contests were the most boring people in the world, then one day testing a new bugcatcher I built for my car, I responded to a CQ contest just to see if the antenna worked, 4 hours later, and sure the antenna worked, I realized I really got caught up on contesting, and enjoyed it, so I don't think poorly of contesters, I never bad mouthed them on the air or internet though.

So before you bad mouth the code, and those who use it (which is very rude indead), try it. If I bet, I would bet on 2 things, the first, you will be as terrified as you have been in your life, the first time someone actually responds to your CQ, in fact I would not be surprised if you chickened out and pretended you didn't hear the other station. Two, after a couple of weeks of a contact or 2 a night, you will begin to see the charm, and pleasantries of this form of communication. The first two or three weeks, the contacts will be stressful, but exciting, after this they will be come relaxing and very enjoyable. You seldom run into any of the garbage, qrm, and discourtous behaivor on CW.

Just try it before you bad mouth it. I know a few people do have a learning disability that prevents them from using the code, I at one time thought maybe I did, then I decided to really try, and in a few weeks I passed my 13 wpm. I also have met people in testing who passed the 25 wpm code prefectly, but became so stressed over the written test they had anxiety attacts and had to stop testing, should these people be given the license because they can't take tests? What we did was sent the VE's over to the guys house to meet with him and take a practice test, he aced the practice test, and was thrilled when they told him it was the real test and he passed.

Sorry for rambling, but business is slow 2 days before a holiday.

Of course it is.

You weren't given any choice of protecting the information,
were you? It was either give up the information or give up
the possibility of a license.

>>Don't you remember providing this information on your Amateur Radio
>>License application?
>>
>>No - this is not a "privacy violation." Not even if someone uses that
>>information for illegal activity. That information is in the public
>>domain.

Prediction: This will change. Certainly the FCC needs the info
to do its job, but the rest of the world doesn't need it. I don't
mind making my information public, but I don't insist that every
other ham must feel the same way.

In the meantime, I'd suggest that you get a post office box and
use that as your address (as I did). Sorry if you are sensitive
about your age, though. Maybe you could just fib a little?

From: jmt@world.std.com
Message-ID: <xlpviaskcfx.fsf@world.std.com>
Source record: 212041

I'd like to get my amateur radio license. Ideally, I'd like to go straight to Extra (doesn't everyone?) but I'll be satisfied with passing up to Tech+.

Getting the code will just take time and practice, maybe three or four months of half an hour a day.

However, getting the theory is different. It seems I have two options: studying the questions and the answers, or studying the theory.

Studying the questions and the answers is in my not-so-humble opinion a lame way to get your license. I'd rather learn the theory behind the questions and derive the answers intelligently than parrot back crammed information. Especially since I'd like to do a bit of experimentation, and I'll have to learn it all anyway.

So, I know I need to study the Rules. But could someone recommend some good college-level texts on the technical side: electronics theory, radio theory, antennas, the whole nine yards?

It's going to be a long winter. I'd like to spend it studying, so if anyone has any recommendations, that would be great. (Also, if anyone knows of any colleges in the greater Boston area that have night school or college courses steered to assist in getting an amateur radio license, that would be wonderful as well!)

Thanks a lot for your help! Hope to see you all on the airwaves someday!

Jack.

You might have a point if the FCC rules actually required the clubs
to be registered as non-profit organizations. Since you've apparently
not read the rules (or seriously mis-read them), I'll reproduce
the salient section:

P97.5(b) (2) A club station license. A club station license is granted
only to the person who is the license trustee designated by an officer
of the club. The trustee must be a person who has been granted an
Amateur Extra, Advanced, General, Technician Plus, or Technician operator
license. The club must be composed of at least two persons and must have
a name, a document of organization, management, and a primary purpose
devoted to amateur service activities consistent with this Part. The club
station license document is printed on FCC Form 660.

Clearly, the club need not be sanctioned by any government body in
order to qualify for club station licenses.

Source record: 212046

Hi y'all...

I have a BURNING question...

I just unloaded my Yaesu FT-757 and picked up an FT-900. Plugged it in to the Astron (grounded), Grounded out the system, and plugged the whole thing into my Attic mounted G5RV. Happy as a clam am I, chit chatting away on my nice new rig, until I switch to CW. I am using a Bencher paddle (black, if it makes a difference :-)) and OUCH! when my finger tapped one of the rivits on the lucite paddle i got BURNED!

Okay, now, you are talking to the guy who, while holding his chrome D-104 decided at one point in his Hamming career (while xmitting) to push down the "top hat" wire to one of the main amplifier tubes on his Heath 220 Linear Amp cause it looked like it needed it, suffice it to say I am still here, and have a pretty good feel for voltage... and this was DIFFERENT.

It didnt feel like 110 volts, too hot, it didnt even feel like 700 volts of plate current. It felt HOT, almost like RF energy (ever tap the end of a dipole when keying???) So, I need suggestions. Is it AC? RF? HOW CAN I STOP IT? Could the attic mounted G5RV be involved? I was only putting out 100 watts.

Any suggestions are deeply appreciated.

PS-The system is grounded.

Thanx -- Pete -- KA2YDY

>ten repeaters on one pair. cuts the number of 'mostly' unused channels
>down 10:1 immediately eh?

Several things I can think of off-hand:

1. You get sued for discrimination, as there is nothing in the FCC regulations that state a repeater must be "open". All it takes is one lawyer who wants to set up a private machine and gets denied. I hope you have lots of private liability insurance.

2. I start an alternative organiation: "The Closed Repeater Coordination Society", and issue coordination certificates to anyone who pays the $10 annual membership fee. Since the FCC does not recognize one coordinating body over another, the closed repeater's coordination now has equal standing with your coordination certificates.

3. I coordinate my repeater as an "open" repeater with your organization. I then, exercising my regulatory privileges under 97.205(c), send letters to everyone who keys up my machine that I do not want on my machine. Or, for that matter, I come on the air and tell them they are not welcome. Your organization cannot supercede federal regulation, thus you are in no position to tell me that I *MUST* accept any and all people on to my repeater.

>#2 Any 'OPEN' repeater to be coordinated in preferance to any 'closed
>and private' same definition as above.

This activity has, and will, ultimately wind you up in court.

>#3. repeaters falling under arbitrary 10% usage for six months is
>elegible for 're-coordination' to free up the frequency pair.

Define "10% usage". There are 4,368 hours in a six-month period. Does your 10% usage mean the repeater must be in continuous operation for 18 days out of those 182 days?

What constitutes usage? The same two people getting on every night for 2 hours and ragchewing? What if I decide to replay "This Week In Amateur Radio" once a morning and once an evening for an hour?

Who determines when a repeater is "not in compliance" with this 10%
usage rule? Does the coordinating body have the burden of proof?
Does the repeater trustee? A trustee is not required by Part 97 to
monitor, or have control operators monitor, the repeater 24 hours
a day. Thus, legally, your "10% usage" rule cannot be effectively
measured.

>#4 'Club' repeaters only coordinated for clubs with membership >25.
> with no more than one(1) repeater per band.

Once again, an exclusionary rule ultimately bound to failure in a
court case.

>That ought to cause some talk, but as long as we're going to do it ,
>let's fix it right for the whole country. We could *start* the
>experiment in Southern California though.

This "fix" sounds like nothing more than yet another case of the
"have nots" attempting to take away from the "haves" due to
class-jealousy.

>ABC/WIBC but they're not incorporated with the state.

Your bowling league is not a "club" nor is it claiming any privileges
as a "club".

>what about a school club?

School "clubs" generally do not have the benefits of a legally
defined "club" a-la bank accounts and so on. A school club is
nothing more than a group of people.

>what about a club supporting a red cross chapter?

What kind of "club"?

>what about a club attached to one of the shrine groups?

Shrine group has a charter, "club" is merely a committee of
shrine members participating in a common activity.

>there's three groups just off hand that i would think would not benefit
>from the added over head of having to be "official" with the state (and the
>feds since the state will want an IRS EIN number...)

I don't know about your state, but ours does not require an EIN to
obtain "club" status. For that matter, when I incorporated my
business the state didn't care what my EIN was, until it was time
to file state income tax.

The answer to this whole issue is very simple. What legal standards
must a group adhere to or fulfill in order to be legally recognized
as an organization in the eyes of the courts?

In absence of these supporting items, it is my opinion that the FCC
should rule the Tucker's applications for club callsigns fraudulent.

Dana,

At this point I think you're being thick-headed for the sake of
being thick-headed.

What legal standard defines a "club"? If a group of people wanted to
claim that they are "a club", what documentation would they have to
show in order to legally prove their claim?

At the very minimum, a club is supposed to have a set of by-laws.
These by-laws are supposed to be registered with the Secretary of
State's office. The fee is usually nominal -- for instance, here in
RI it is $50. Doing so gets you a nice letter from the state saying
you are registered.

Having the piece of paper is very important. Until you get it,
most (if not all) banks will not open an account in your club's
name, and so on.

My point is this: In the case of the gentleman in CA who has obtained
something like 30 club calls to date, there is probable cause to
warrent further investigation by the FCC. You are correct in saying
that the FCC does not state in their rules that your "club" must
be registered.

> The club must be composed of at least two persons and must have
> a name, a document of organization, management, and a primary purpose

> station license document is printed on FCC Form 660.

>Clearly, the club need not be sanctioned by any government body in
>order to qualify for club station licenses.

No, you have proved my point.

In order for By-Laws to be effective, they must be officially
registered with the State. Otherwise, they are not By-Laws.
Its that simple.

> Ham radio is a joke HI HI?
>

Burt is correct. Ham Radio is dead or nearly so.

I have not been active in the hobby for quite some time. I guess that I lost interest in it during the late 1970s or so. But I kept renewing my license & every once in a while would look over the latest copy of QST or 73 or Ham Radio, etc. Nothing ever seemed to change.

Also, I had not been to a hamfest since the early 80's. Recently my trusty car had begun to make me question its reliability, and it even broke down once leaving me stranded with a several mile walk to the nearest payphone, so I decided to shop around for a used 2m HT just in case of emergency, etc.

Well, there was a hamfest very nearby at Brookdale College in Lincroft NJ on one of the Sundays this past October. So I headed over to it, and paid my $6.00 (I believe this is correct...close if not exact) to get in. What a joke!! The # of dealers present in the inside area could be counted on two hands. One of the booths was Radio Shack. Another was the QCWA oldtimers. Out of the handful of dealers in attendance, I think one had new rigs on display. I could now see why the parking lot seemed so empty.

The outdoor flea market was even worse (granted the weather was not great that day but it was not intolerable either). There were maybe 50 or so sellers, and I could swear that the majority were selling exactly the same

old junk I saw at my last hamfest in 1982 or so.

I left feeling ripped off for my $6.00, but not sad. Time has passed ham
radio by. There was literally nothing there which I could see would attract
youngsters, new enthusiasts, etc. today.

Several weekends ago, I had some free time and decided to check out the
KGP Computer Show & Sale up the road in Raritan Center (Edison) NJ. I
arrived about 45 minutes early and there was already a huge line waiting
to buy tickets & get in. Here too the admission price was $6.00 if memory
serves me correctly. There were over several hundred dealers, etc. selling
new merchandise of all sorts. I spent a few hundred $ on RAM, a backup
tape drive, a bigger hard drive, some software, etc. & had a great day at
the show talking with all the dealers, haggling over prices, etc. Totally
180 degrees out of phase with my experience at the hamfest. What a
contrast!

As for the mobile communications needs, I got myself a cellular phone.
Works great, too.

Burt *is* correct.

M. Baker, WA3ZXO
mbaker@monmouth.com

P.S. -- None of this is intended as a personal affront towards the
undoubtedly
nice group of people who put on the Brookdale Hamfest and work plenty
hard at
it, but rather an attempt to describe my observations.

I talked to a representative at the FCC this morning to see where my gate one application might be. I just got around to mailing it on September 25th. I was told they go strictly by application receipt date, not by gate numbers. The lady also told me that NO VANITY CALL APPLICATIONS will be processed until the ones received on September 23rd were processed. I guess I should have sent my gate one app in when the gate first opened.

It's RF and is usually caused by high SWR. Your G5RV is probably at
fault. It's RF "coming back at you".

> public and fair. I'd like to hear some concrete proposals.

OK John,
concrete proposal #1.
all 'closed and private' repeaters (eg either NO or prohibitive
method to join or exclusionary membership rules) to be coordinated in
groups of perhaps 10 at a time to one(1) frequency pair. That's right
ten repeaters on one pair. cuts the number of 'mostly' unused channels
down 10:1 immediately eh?
#2 Any 'OPEN' repeater to be coordinated in preferance to any 'closed
and private' same definition as above.

#3. repeaters falling under arbitrary 10% usage for six months is
elegible for 're-coordination' to free up the frequency pair.

#4 'Club' repeaters only coordinated for clubs with membership >25.
with no more than one(1) repeater per band.

This is not just for SoCal,but New York Long Island, Chicago, Washington
DC, and others too!
That ought to cause some talk, but as long as we're going to do it ,
let's fix it right for the whole country. We could *start* the
experiment
in Southern California though.

Concrete enough ?
73 es gud luck with this work!

Let us ALL get off of our collective duffs and do something about the dictative approach that certain entities are taking towards our utilization of our allocated Amateur frequencies. This matter only STARTS with the VHF. UHF and microwave bands but could eventually migrate to further regulatory dictation concerning our lower HF bands.

Please visit http://www.surf-ici.com/cise/n9xdw.html Follow the "link to the truth" and then come back to the above mentioned page to find some e-mail adresses where you can write to voice your opinions.

We HAVE to let our COLLECTIVE voices be heard on this matter or we may lose what we deem to be precious to our hobby...Spectrum management and frequency utilization.

Thanks and 73,
Brian (ARS) N9XDW

> >hmmmm

Maybe the jokes aren't funny. But neither is what lawyers are helping to do to our hobby, our country and our world.

People oftn use humor to release frustration and tension. The cost of doing business with and the results of lawyers causes both. No wonder there are so many lawyer jokes.

Perhaps if lawyers had a canon of ethics which kept them from taking frivolous cases, charging exorbanant rates, raping those who win large judgement sums, and taking or making action that hurt groups like amateur radio they would have a some respect from the general public.

Of course, some lawyer will try and justify or nullify the above. That's what they do.

I have obtained an FT708R that has been xtaled up for freqs other than the 70cm band. I wish to get it back in band (430-440MHz) but have no documentation to do so. The xtal I suspect controls the TX/RX freqs is 46524.5kHz. This give a TX/RX range of 470-480MHz. Can anyone give me a clue as to what freq this rock should be, or does anyone have the relevant info to calculate the rock freq.

thanks

Probably true. However, as an administrative agency, the FCC does have
the authority to determine, on the basis of equity, whether its rules and
regs are being abused, and take appropriate action. Such agencies have
considerable discretion in this regards. It it wanted to, FCC could decide
that the Tucker farce needed to be put out of its misery.

Not likely, given the fact that the FCC won't even shut down 435, the crud-magnet
repeater run by their club (I guess). Talk about clear and unambiguous
systematic violations of FCC rules...

>repeater.

True. However, your coordination could be pulled as per the by-laws of the coordinating group. Nothing new about that, pal.

>This activity has, and will, ultimately wind you up in court.

Nonsense. Bosh and tish.

This old chestnut about being sued gets trotted out every repeater thread, largely by chaps with little knowledge of how things really work. The old, tired, sad, and much-exaggerated Texas saga is now due for its semi-annual appearance. Everyone get your newsreader kill files ready. :-)

In actual fact, it is a lot harder to get any effective lawsuit rolling than most people think. In this case, not very likely, and not very expensive. Sure,

I can sue you for having orange hair, let alone for your repeater activities.
So what?

>>#3. repeaters falling under arbitrary 10% usage for six months is

I have an Icom ICW2A HT and have noticed that every once in a while the squelch will not break with an incoming signal. The S-meter deflects and the green LED comes on but no audio. I cycle the power and it seems to recover, or I tap on the top or face of the ht and the audio will come on. I've even turned the squelch control full off and no audio will occur. Has anyone else had this problem?? Any insight would be appreciated.

1760. Re: iphone 4.5 full duplex audio and colour video

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-27 00:00:00 UTC
From: Rick Lehman <rlehman@icanect.net>
Message-ID: <329C0C8E.5625@icanect.net>
Source record: 211782
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,uk.radio.amateur

I've used Iphone for sometime with a 486DX75. The audio is very good
and the live video is useful even with this slow of a machine. The
frames per second is pretty slow ranging from .1 to 1 fps. But never
the less the other party does get some useful video. I do not find that
duplex is too useful because of the delays associated with the internet.

Hi Jack,

Take a look at tht books from the ARRL's license study series. They explain the theory and contain questions/answers as well. The ARRL Handbook for Radio Amateurs is also a good and quite general introduction.

Hope to meet you on shortwave soon...

73,

Wolfgang DJ3TZ

You can't create your own notion of a legal standard and expect
the FCC to abide by it. Part 97.5 is the legal standard used
by the FCC to define a "club" in the context of club callsigns.

[... Mike's own definition of a legal standard deleted ...]

>My point is this: In the case of the gentleman in CA who has obtained

>be registered.

What probable cause is there to investigate Tucker or Roach?
Here's a free clue: a single club may hold any number of club
station callsigns under Part 97. A single person can be the
trustee for any number of clubs. Are you actually reading Part 97
or simply deciding how it should be instead?

>> The club must be composed of at least two persons and must have
>> a name, a document of organization, management, and a primary purpose
>> devoted to amateur service activities consistent with this Part. The club
>> station license document is printed on FCC Form 660.

>
>In order for By-Laws to be effective, they must be officially
>registered with the State. Otherwise, they are not By-Laws.
>Its that simple.

By-laws? Official registration with states? What are you reading?
Part 97.5 requires none of this. Perhaps I'm mistaken and you
can show me actual citations from Part 97 that will straighten
me out, but I think you're reading things that aren't there.

Irrelevant. The FCC definition of club has nothing to do with the
State of California, or any corporate fees it may charge. The FCC
doesn't require a club to be incorporated.

Heh, this is a common problem, and not just with the DSP-232.
The PK-232 has it too. The problem is a lack of RF bond between
the case halves. If you sand the paint off the mating surfaces,
and use a screw every 5 cm (as is standard VHF shielding practice),
those harmonics of the reference oscillator stay inside where
they belong, and don't radiate all over the shack.

1771. Looking for: callsign allocations by country

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-27 00:00:00 UTC
From: kla@helios.augustana.edu
Message-ID: <kla.849104159@news.bradley.edu>
Source record: 211793

Looking for a breakdown of callsign prefix allocations
by country. Specifically want something that will get
specific: for instance, indicate that ZF2 is in fact
Caymans and not just a basic UK and territories allocation
(I have that already).

Is such a detailed callsign prefix list on Internet?

Thanks. I'm just getting started in this DX business,
and was all excited to work a ZF2 call last night, thinking
I'd finally hailed Europe on 40m, but was disappointed this
morning to hear it was just Grand Cayman -- DX, true, but
nonetheless a minor let down.

The FCC doesn't care how a court might define a club for *other* purposes.
For the purpose of issuing a club station license, the FCC clearly states
the requirements to be considered a club in 97.5(b)(2). And that only requires
the club to have a name, a written set of club articles, officers, and have
a primary purpose devoted to amateur radio activities. A minimum membership
of two is required. The ARRL has put forward a RM to increase that to 4.

>cpeebles@saloon.bcbbs.net

I had a Yaesu one time with a button marked 'NB'. I called it the Nothing Button, because when I pressed it, nothing happened. Maybe Icom has copied the concept from Yaesu, but I doubt it. In all the Icoms I have seen, the noise blanker is adjustable and seems to work very well. Usually most Icom radios come with a book that should explain the features, but I don't have a 706 so maybe the manual is an option these days, like microphones and CW filters. Let us know when you figure it out, we might have a 706 some day.

>anything.

Yes, there's a sensitivity adjustment, R126 on the main board. But all you get by adjusting it is more distortion on strong signals. It doesn't help make the blanker work better. It is factory set to clip at -82 dbm. To improve blanker action, you need to change the time constants of the blanker. That's too involved to try to describe here unless you have the service manual at hand. And even that doesn't really help that much. That's because the noise amp it tuned *in-band* and nearby stations still drive it nuts. It needs to be tuned to outside the amateur bands (about 36 MHz), and that's a quite involved mod.

>
>Since this is a matter of FCC regulations, I wonder if anyone has bothered
>to alert the FCC with this problem?

Problem? There's no problem. As long as the amateur community recognizes
and tolerates these coordinators, they are operating with FCC sanction
under 97.3[20]. Now if the amateur community decides that they won't
recognize or tolerate these coordinators, then the FCC will have to
abide by that too according to 97.3[20]. There's nothing for the FCC
to become involved in here. All they need do is abide by their own
regulation and honor the decisions of the local amateur community.

This is a matter for the amateur community to handle internally. All
it would take is a simple plebiscite of the amateur community of the
area to resolve the issue. So if you don't like things the way they
are, do the necessary politicking to get the matter put to a vote,
print the ballots, see that they are mailed to every eligible amateur
in the area, and pay an unimpeachable body to do the count (Price
Waterhouse is often used). Mail the result to the FCC for their
information, and the problem coordinators, and the machines they've
coordinated, will lose their sanction under 97.205(c).

Of course, nature abhores a vacuum, so now you have to get back to
grassroots politicking and set up a new coordinating body which will
implement the policies you want, and get it recognized by a majority
vote of the concerned amateur community. Now you'll have FCC sanction
to back your decisions, but that's only the tip of the iceberg. Then
the *real* work begins. You're going to actually have to recoordinate
the band, and make your recoordination stick. Repeater wars and litigation
are sure to result if you coordinate new open machines on the same
frequencies as the existing closed/private repeaters. With amateur
community support, and FCC sanction, you will ultimately prevail,
but expect it to take years of turmoil.

This is how real change occurs. It is never easy. No one is going
to wave a magic wand for you. You've got to get down in the trenches
and get your hands dirty doing the work yourself.

Don't forget that 10M also has a large FM spectrum. 10 Meters FM is a great place to hang out and rag chew with the locals. Far better than 2 meters or 220 as there are very few people around interupting your qso's. You could spend hours just talking with people. Then sometimes right out of the blue comes someone from the next state over. That nice short E layer propagation.

I have noticed over the last two years or so that groups of friends are buying 10 meter rigs and using them like you would use 2 meters. Lots of space, less people to get in the way of a qso. Very popular for local

work during low sun spot cycle.

Well, i think you'd have to do a little more research to reach such a broad conclusion. The Tampa Hamfest reported several thousands of participants. Orlando (coming up in feb, i believe) also draws big crowds. There are also many smaller fests. Most these days are combined with computer equipment for broader interest. So perhaps you just attended a fest that was designed to be small. Perhaps you need to ask around and plan a bit better.

Good Luck. I've only been in the hobby a couple of yrs but am learning quite a bit and having a good time. And my prior electronics exp was vcr programming...:)

I'm very much looking forward to the "good" part of the upcoming cycle.

Yep, in some aspects, I guess ham radio is kinda like sex. Nothing new to do,
but still seem to be a bunch of people doing the same ole same ole.

>Also, I had not been to a hamfest since the early 80's. Recently my

Now THAT'S ham radio - a two meter HT, with a Touch Tone Pad !!
Next time look at a cell phone swapmeet for a used cell phone. Much better
for road side emergencies. When you call for help on two meters, you never
know what kinda wierdo might show up. Besides, most towing companies
don't have two meter radios in their tow trucks anymore anyway.

Absolutely right, Gary.

It is probably the only reason the existing bad coordination has
continued for so long. The guys "in power" were the only ones
willing to take on such a daunting challenge.
It says nothing about how well they do their jobs, but rather
about what a thankless pain in the backside it is to do it.

The Southern California 70 cm situation is probably the worst
example of how the present rules, regulations and laws do not
work. The prospect of a single point of contact being designated
as the authority for coordination starts to look appealing.
My own fear is that the result will be to make the present
bad situation more or less permanent here.

If we don't replace SCRRBA entirely, then we ought to at least set some standards for how frequency coordinators must act. There needs to be some safeguard against a band being locked up by a few guys with an ego problem.

If we agree that things should be changed, then the real work, as you say, will be in how we get from where we are now to where we should be. People will get hurt in the process.

Again, Tony, I am not complaining. I was EXplaining. I don't care if the Tucker family has 193 club callsigns, or if every ham in Japan has a U.S. 1 x 2 call. Personally, I am very amused by the 'Vanity Calamity'. I thought this thread would be a great way to point out that the Tuckers are not the first group who have had thier way with the FCC and U.S. callsigns.

>As I suggested before, if you don't like the rules, then you have as

>license does offer a convenient licensing route over here.

>I only discovered this 30 years too late to be of use to me :-)

No, that's a new twist if I understand what you are saying. You (a U.K. resident) take a U.S. test, get a U.S. license, and then are given a U.K. license by presenting the U.S. license ? I think that's what you meant.

And once you have three licensed U.S. extra class hams in the U.K., then they can sign up with W5YI as a VE team, and give the U.S. tests in the U.K. so nobody has to spend any money on plane tickets. And anybody else in Europe that wants a U.S. license can zip on over on the train. Until they get three extras

licensed in their country, then they can save the train fare. Whoppie. Sounds like fun to me. Then everyone in Europe with a souvenir callsign can apply for a vanity call. No wonder there are not many call areas with any extra class calls left. The Tuckers didn't get them all afterall.

Fortunatly, that system doesn't work to obtain a U.S. license, or everyone would run to the Philippines and buy a ham license, and then take it back home and trade it for a U.S. ticket .

What I meant by reciprocal was this. If a Japanese ham shows up in Bermuda, and wants a reciprocal license to operate in Bermuda, and presents his Japanese license, he can't get one because Japan/Bermuda have no agreement. But if he presents his U.S. license, wham - he's VP8DX. (I am using Bermuda as an example, I am not familiar with Bermuda's requirements). Japanese hams can't use a U.S. license to obtain a license in their own country. The way it's been explained to me (by Japanese hams) is that they can operate in many more countries if they show up with a U.S. license as opposed to showing up with a Japanese license.

But reciprocal is a very poor choice of words when it comes to Japan and the U.S. and ham licenses. A Japanese ham can get a U.S. license with a regular U.S. call for $ 6.25 (or whatever the going VE rate is) that is good for life. And a U.S. ham can get a Japanese call, which labels him as a foreigner, for only $150 or so every year. Whoever worked out that reciprocal agreement didn't have a dictionary available at the time, apparantly.

Back to the U.K system for a minute. You have to put a U.S. address on the 610 form, no matter where in the world you were when you took the test. I have a few Japanese friends, all of whom have been to Guam, taken the test here, and operated here, who used my address on thier 610 forms. One friend continues to come to Guam and operate contests from my shack. When scanning the callsign database for Guam, we find a number of P.O. boxes that have multiple callsigns issued to them. Two P.O. boxes (with, if I recall, over a hundred calls issued between the two of them) we assume were used by church groups (missionaries use ham radio a lot). The others we assume were rented for the sole purpose of being used as an address for 610 forms, with someone collecting the mail and returning the licenses to Japan. What do the hams who take the test in the U.K. use for a U.S. address on the 610 form ?

Maybe that's another thread - 'Addresses 'R' Us!'.

Anyway, now we have three reasons why non U.S. hams want U.S. calls:

1. Souvenirs
2. Dxpeditions.
3. Because it's more convenient than taking the test at home.

Maybe number 4 should be 'To keep up with the Tuckers' :<)

Any more additions to the list ?

Sounds like you already figured out the problem and the solution. It's probably RF and putting the antenna a bit farther away from the ham shack would probably solve the problem.

I agree; that's the reason that it took me a few months to pass my Extra theory exam. But I had worked in radar maintenance several years ago, and have always been interested in electronics theory.

: So, I know I need to study the Rules. But could someone recommend
: some good college-level texts on the technical side: electronics
: theory, radio theory, antennas, the whole nine yards?

I suppose you *could* complete the electronics courses required for an A.S. degree at a local community college - ours here has a great program - but that may be overkill for your needs, in terms of time.

I agree with the suggestion to work your way through the ARRL LIcense Manual series, the ARRL Handbook, etc. There's a good book for those new to electronics and ham radio published by ARRL, called "Now You're Talking," which we use as a textbook for the Novice/Technician course at our local ham radio club. I'm currently using the ARRL Advanced Class License Manual to help some of our members upgrade from General, and I'll use the ARRL Extra Class License Manual when I teach that class.

In Boston, you should have any number of ham radio clubs, including BARC, which is well known nationally. I would be surprised if one of these clubs didn't offer licensing classes.

If you want to go into a bit more detail in learning electronics theory, you might get one of the books intended to prepare for the GROL.

Good luck to you, in your quest. It's refreshing to see someone who is interested enough to *learn* something, rather than taking the easy way out.

It's being done right now! FCC Docket #WT 96-188 will implement the CEPT
license agreement once our State Department signs the CEPT agreement which
the FCC expects to happen by the end of the year. For more information,
take a look at: http://www.fcc.gov/Bureaus/Wireless/Notices/fcc96375.txt.

The G4NJH Radio Pages
Christmas Edition

http://www.innotts.co.uk/~asperges/

Nearly 25,000 visitors and growing... Don't miss it.

* Pages for old and new enthusiasts.
* Friendly - not just a collection of links;
* Updated for Christmas;
* SWL, Scanners, Amateurs, Students, Novices, links, narrative;
* News, views, contests, Computers and Internet, feedback,
* RSGB, UKRS, even Burns, Wollaton Park, St George and Guy Fawkes
* Christmas MENSA puzzle;
* Free giveaways in December (as soon as RA3AKR sends it to me!)

People are born Irish or black. It's not their fault.

Ok, I get your point. I did not start this thread to change the
world, nor did I expect it do make ANY difference. I just wanted to
see other HAM's reactions.
Second, DO NOT call me an Internet Newbie. I have been using the
internet for many years.

> I just unloaded my Yaesu FT-757 and picked up an FT-900. Plugged it in
> to the Astron (grounded), Grounded out the system, and plugged the whole
> thing into my Attic mounted G5RV.

Grounded doesn't always mean grounded. You're using flat braid running outside to a copper rod driven into the ground, correct? Your shack is on the first floor of your building, and thus the run of braid is fairly short, correct?

If you're on the second floor, with a less than conductive ground system, your ground system can start to act like an antenna. On 20 meters, a second story ground run could easily approach a half-wavelength!

When that happens you get what's known as "RF in the shack," and it's not fun. If you can't change the location of your shack or the grounding material, read up on something called a counterpoise. It's not a ground, but it'll make your radio THINK it's grounded.

It wouldn't hurt to get the G5RV a longer distance away, but I'm betting that's not the problem.

1803. Re: Ref: Closed & Private Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-27 00:00:00 UTC
From: scott9@pipeline.com
Message-ID: <57ioar$i3c@camel4.mindspring.com>
Source record: 211875

One thing that really bothers me, more than closed repeaters, is that the coordinating bodies (i.e., SCRBBA and TASMA), have lousy public relations, and are not willing to deal with questions or complaints.

Scott, KF6FCN

1804. US License Examination Opportunities Scheduled 11/27/96 to 2/27/97

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-27 00:00:00 UTC
From: "Bart Jahnke, W9JJ ARRL/VEC" <vec@arrl.org>
Message-ID: <329CAC07.4B58@arrl.org>
Source record: 211876

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/~hamradio/

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you. Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or 1C credit qualifies the holder for Technician Plus HF privileges. The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit for the element(s) shown as passed. A Physician's Certification on a Form 610 is acceptable by a VE Team for 365 days after the Physician's signature date. Once accepted by the VE Team, assuming the applicant qualifies for a General or Advanced license, a CSCE is issued showing Element 1C (or "Physician's Cert. and Release: 1C") credit is valid for 365 days toward an Extra class license.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 860-594-0300 for additional

information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05. The 1997 fee will be $6.25

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

I think we should develope new ideas and policies dealing with frequency coordination here in the So. Cal. area.

what would it take to create a new committee?

who should be on the committee?

how should they be put on the committee?

There are but a few questions that need to be addressed. Does anyone else have ideas on other issues?????

>
> What exactly is MARS / CAP?

Well, they gave you the meaning of the acronym, but they didn't explain what they are.

MARS is an amateur radio based backup to military communications. While that is the official justification, the reality is that MARS provides an inexpensive way for servicemembers to contact their families. MARS members handle thousands of 25-word MARSGrams, and many hours of phone patches, for those serving in far-away places.

CAP, the Civil Air Patrol, is a Search-and-Rescue auxilliary of the US Air Force. It's members fly many hours, in their own airplanes, looking for lost individuals. CAP also has a cadet program, working with young people.

Both these organizations use frequencies outside the ham bands, and most ham radios here can be MARS/CAP modified for such use.

I would like suggestions and or recommendations for Commercial Ham classes in the LA, Orange County area. I have given up on the "spare time" study method for the code. Who has spare time. I think that the concentrated method over a couple of weekends might work better for me. The only school I have heard about is Gordon West. All input is greatly appreciated.

Hello to all and thanks for reading this message

I recently acquired some surplus cable TV trunk line. I suspect the cable is 75 ohm but not sure. The cable is 11/16 inch in diameter with black plastic coating over an aluminum jacket there is a white dialectric and a thick center condutor. the numbers written on the wire are T10 J. On the reel there is a Type No T10625JBFV1 and below that the number GN7GN. I would appreciate any help at identifying this wire what it's approxmatly worth and were I would be able to fine connector that would fit it.

Thanks Again
73's Doug VA3DMB

1812. FCC does the right thing!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-27 00:00:00 UTC
From: "T.J. Alessi - K1TJ" <Tom@Alessi.Com>
Message-ID: <329D144A.18C0@Alessi.Com>
Source record: 211884

I am happy to see that the FCC did the right thing and had
the balls to rejected petitions by those who got there
applications returned for being in too early.

For those of you who did not read it here is a
quote from the ARRL Bulletin released today:

"An FCC spokesman in the Private Wireless Division said the petitioners
failure to get their applications to the FCC on the correct date was a
matter for resolution between the petitioners and the courier service
involved (the same in all cases) and not the FCC. The Memorandum of
Opinion
and Order said the petitioners did not show that either Mellon Bank, the
FCC's fiscal agent, or the FCC itself was in error in how it handled
the applications. The Commission also cited a 1984 public notice that
stated the FCC would not consider any claims of this type where a
delivery service was blamed for an application's not being filed on
time."

I DO feel sorry for these people, but, "BRAVO TO THE FCC".

Me too.. and another thing.. where I live there has been a large number of 'no-coders' treating 2Meters much
in the way some treat CB.. let's face it.. it gets annoying. 10 FM is still an area where HAMS who take the
hobby half seriously can go for a decent conversation.

Jim..

This is good and essential advice, and I'm really glad that nowadays
people recognize the problem. It's half the solution, or less than
half; the most important thing (IMHO) is learning the long characters
first (at high char speed of course) instead of the way I was crippled:
if you learn the simple ones first, then you end up making as many
decisions per character as there are elements in the character. Gak!
Furious activity in one part of the brain, while another part of the
brain is sitting around just getting frustrated.

1817. Re: FT-708R freq change

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-27 00:00:00 UTC
From: jan.van.lienden@ict.NL
Message-ID: <329C2B44.7014@ict.nl>
Source record: 211889

Hello David,

According to the manual the models A and B of the FT-708R have the
following frequency ranges:

Model A: 440.000 - 449.975 MHz USA model
Model B: 430.000 - 439.975 MHz

The crystal frequencies (X202) are respectively:

Model A: 43.1911 MHZ
Model B: 42.080 MHz

So, to bring it in the range from 430 - 440 MHz change the crystal
from 46.5244 MHz to 42.080 MHz.

Good luck with it,

Jan van Lienden, PE1CID

What do you think of the following message I received?
(Ihave asked Ruthie to debate on the air and she said she would after she re-set
up her equipment. That was months ago. I await you Ruthie.

Date: Sun, 03 Sep 1995 21:55:54 -0400
To: k1oik@ccsnet.com
From: Ruthie Cunliffe <ruthie@eznet.net>
Subject: ham??

Dear Burt,

Your bizzare ramblings in the misc ham newsgroup have been rather entertaining.

I'm curious as to why you bother keeping your ham radio license if you think
all hams are rotten to the core?

I'm also wondering if you are the least bit aware that if it hadn't been for
Jews in the first place, Hitler wouldn't have had any reason to go on a rampage and possibly that would have spared the lives of many Germans, Italians, Poles, Russians and many other ethnic groups? Should we hate ALL
JEWS for even exsisting because if they hadn't possibly my relative would
...have been spared rather than put to death (not a Jew, a German who was ill
and was encarcerated and put to death during WWII)?? Thankfully I do not
live in the past nor do I carry hate and unforgiveness in my heart and soul.
My life is much better because I don't. Try it, you might like it.

A couple points I thought about making in the newsgroup but since I am not
one to regularly frequent that newsgroup and also don't wish to embarass you

in public (you're doing that just fine all by yourself) I choose to make these points in email:

YOU did not live through World War II. YOU did not spend time in a concentration camp. YOU haven't a clue what the word NAZI means. YOU don't

have much reason to be proud of your heritage as an American now do
you???
How many Native Americans were slaughtered by Americans? How many
Africans
and other ethnic peoples were tortured and died due to being enslaved by
AMERICANS??? How many people died due to the AMERICANS using nuclear
warfare?? How many Jews, Germans and others died during WWII during the
intentional fire bombing of cities such as Dresden???

You should think about some of these things before you open your fat
mouth.
If you're babbling in the newsgroup is just for entertainment then keep
at
it and anyone who is not a ham and happens into that newsgroup will
possibly
think that all hams are like you. But if they stick around awhile
they'll
realize that you're nothing but a bag of wind with little if no
intelligence
behind what you say. Oh..and the .gif file idea was a real scream!!

My sympathies, Burt, if you're doing this for more than
entertainment....your life must be really empty and full of hate.

I find this rather amusing. Why, 1/3 of those that responded
feel that the $30 a year is too expensive. I can only assume
that these same individuals are not members of any other
organizations, either nationally or locally, as I find that the
annual dues is extremely reasonable in today's value
of money.

One thing that strikes me as odd is that the survey results
must bviously reflect those hams that have internet
connectivity of some type. Tht, at least to me, indicates
the liklihood of the respondent being employed by a
compay that provides internet access to its employees
(and thus the probability of a reasonably decent paycheck)
or that the person has his/her own access account
to the internet which indicates the ownership of
a computer (not a cheap item itself) and monthly internet
access costs which dwaf the annual ARRL membership
dues cost.

Considering that every ARRL member gets 12 issues of
QST with the membership, I really have to wonder just
what any of the 31 people that picked the "dues too
high" choice would be willing to pay for membership?

>anyone.. The change was brought about by people who

Robert, that's just not true. Maybe certain stores would ask to see
a license, but that wasn't the law.

I walked into Henry Radio their (LA store) and bought a used Swan
40m mobile transmitter back in '76 and was never asked to present
a license. There was a Heathkit outlet in Orange County - they
never asked me to present my license when I purchased ham gear
from them.

How would one buy gear via mail order if a license was to be shown
upon purchase?

May I suggest that folks on this NG start presenting references to
back up their "facts"?

And how were you planning on encoding information into this FSK oscillator?
I'd love to see your homebrew keyboard. Or were you going to use an SPDT
toggle switch?

One of the most lovely ideas behind radiotelegraphy is that one only
has to rely upon one's mental faculties to communicate rather than
being dependent upon complex equipment (in regards to encryption and
decryption).

Indirectly this type of proceedure to run a freq. allocation is just one step shy of a business. And the added use of fear tactics and threats and unnessary one way propaganda is all part of the non-amateur means used by some of there members. It will catch up with them. Ed Ginsberg KE6BNL

I let my original call, W7CXA, lapse a few years back. I missed getting
it back by 2 months. The Feds wouldn't bend. I ended up with KK7D as
my
call. Gate 1 opened in June, I think, which allowed you to get your
old call back if it hadn't been re-issued. I didn't send in my
application until September 25th. W7CXA was issued to me again on
November 26th. KK7D is now open for grabs!

Make that a Grayhound bus, Cec. You pay, you get a seat. And that privately owned bus is using a public highway - no other motorist can use that portion of the public highway under that bus.

What's sad here is that you folks, without realizing it, are completely dependent upon someone else's radio (the rptr, open or closed) for your comms. Why not upgrade and get on HF, or at least try V/UHF simplex?

What's even sadder is that this thread is on the wrong newsgroup.
Please append "Followup-to: rec.radio.amateur.policy" in the header.

Does this speaker give you adequate noise? My Kenwood TH-77 has little audio output (it's OK when stationary, but not when moving).

>The 2m ht fits in a small triangular bag

Are these front handlebar backs easily obtainable? They sound useful for all sorts of things.

>The tube was soldered to a small pad of pcb about 1" square. This is the

>little wind noise, is hands free and the radio is in front where I can
>see it.

Cunning plan (do we pin a tale on it and call it a weasle?). I will have a look at this in closely (attaching the mic to the helmet was not something I had thought of).

Dave.

Jay,

It must be a local problem. It works for me. Try it a couple of times.
Sometimes the DNS cache needs to be refreshed and a second or third attempt
does the job. Netscape is a little impatient with DNS.

Greetings,

I am planning on building and buying the hardware to interface my Kenwood TS-60s to my computer. I am sure their are others who have already done this and have some opinion on the software available to control the radio once the interfacing has been done. I would like to hear from people who use their radios in this manner and get their feedback on what software they use and what they like or do not like about it. Any recomendations would be appreciated.

Thanks for your time and all reply's will be answered.

Mike, N2QAC.

those of the Broadcast Officer, the Relay Officers, or of the

Society.

A.N.A.R.T.S. News Bulletin 936 25 November 1996

COLS COLUMN

ONE OF THE EXPERIMENTERS OF THE TIME AND ONE WHO THOUGHT

FURTHER EXPERIMENTS WITH THE TELEGRAPH A WASTE OF TIME WAS

PETER BARLOW, A MATHMATICS TEACHER AT THE BRITISH ROYAL

MILITARY ACADEMY WOOLWICH. HE WROTE A PAPER ON HIS WORK AND IN

IT HE ASKS AND ANSWERS A QUESTION. 'IN A VERY EARLY STAGE OF

ELECTROMAGNETIC EXPERIMENTS IT HAD BEEN SUGGESTED THAT AN

INSTANTANEOUS TELEGRAPH MIGHT BE ESTABLISHED BY MEANS OF

CONDUCTING WIRES AND COMPASSES. THERE IS ONLY ONE QUESTION WHICH WOULD RENDER THE RESULT DOUBTFUL. IS THERE ANY DIMINUTION OF EFFECT BY LENGTHENING THE WIRE?. I FOUND A DIMUNITION WITH ONLY 200 FEET OF WIRE, WHICH CONVINCED ME OF THE IMPRACTICABILITY OF THE SCHEME'.

THE SENSITIVITY OF THE MEASURING DEVICES AVAILABLE TO BARLOW WERE NOT SUFFICIENT TO MEASURE THE 'INTERNAL RESISTANCE' OF HIS BATTERY. AND FURTHER HE DID NOT KNOW ABOUT 'OHMS LAW' TO CALCULATE BETWEEN CURRENT, VOLTAGE AND RESISTANCE. HAD HE HAD THE BENEFIT OF SUCH EQUIPMENT AND KNOWLEDGE MAYBE HIS RESULTS WOULD HAVE BEEN DIFFERENT.

IN SPITE OF BARLOWS NEGATIVE RESULTS, HIS PAPER BECAME WELL KNOWN IN AMERICA AS WELL AS ENGLAND AND EUROPE. JOSEPH HENRY REFERRED TO MR BARLOW'S PROJECT. HENRY WAS NOT DISCOURAGED HOWEVER AND CONSTRUCTED A TELEGRAPH OF HIS OWN. IN ENGLAND, BARLOW'S REPUTATION WAS HIGH ENOUGH TO MAKE EVERYONE THINK THAT ANY FURTHER WORK ON THE TELEGRAPH WAS A WASTE OF TIME. HAD BARLOW SUCCEEDED IN ESTABLISHING THE RELATIONSHIP BETWEEN THE PROPERTIES OF BATTERIES, CONDUCTORS AND CURRENT, HE MIGHT HAVE HAD A PROFOUND INFLUENCE UPON THE PROGRESS OF THE TELEGRAPH, BECAUSE THE WORK OF OHM WAS NOT YET KNOWN IN ENGLAND AND AMERICA. THE LACK OF 'OHM'S LAW' ALMOST REDUCED COOKE TO DESPAIR, BUT THAT IS ANOTHER STORY FOR A LATER ARTICLE.

FOR THE NEXT FEW YEARS THERE WERE NO APPRECIABLE CONTRIBUTIONS TO THE TELEGRAPH. THERE WERE HOWEVER, SEVERAL INDIRECT ADVANCES THAT HAD AN EFFECT. THESE ARE : 1. THE DISCOVERY IN 1825 OF THE ELECTROMAGNET BY WILLIAM STURGEON, 2. THE DEVELOPMENT OF STURGEONS WORK BY HENRY IN AMERICA. AND 3. THE OVERWHELMINGLY IMPORTANT INVESTIGATIONS OF MICHAEL FARADAY ON ELECTROMAGNETIC INDUCTION.

FOR NOW 73S DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(15 NOVEMBER - 21 NOVEMBER)

ISSUED ON 22 NOVEMBER 1996

SUMMARY

Date 15 16 17 18 19 20 21

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 21ST NOVEMBER; QUIET TO UNSETTLED 17TH, 19TH AND 20TH; UNSETTLED 16TH; AND UNSETTLED TO ACTIVE 15TH, AND 18TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE ENHANCED TO 15 PER CENT AT TIMES ON 15TH AND 16TH; DEPRESSED TO 30 PER CENT AT TIMES 18TH TO 20TH; AND NEAR PREDICTED MONTHLY VALUES AT OTHER TIMES. pREAD F WAS PRESENT ON 18TH, AND sPRADIC e WAS NOTED ON 18TH AND 19TH.

FORECAST

(22 NOVEMBER - 28 NOVEMBER)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES. NIGHT TIME SPREAD F AND BLANKETING SPORADIC E EXPECTED.

COURTESY OF IPS RADIO AND SPACE SERVICES

Here is an extra item of news for the Packet version of our cast. It is of interest to all DX-ER's. It was included in the RSGB news in the UK last week.

A new five-band HF beacon is now on the air. VE8AT in Northern Canada

transmits for 10 seconds every three minutes on 14.1, 18.11, 21.15,
24.93 and 28.2 MHz in turn. The power levels is stepped from 100 watts
to 100 milliwatts, and the beacon uses a multiband vertical antenna.
VE8AT was heard in the UK last week on 14.1MHz down to the 10 watt level
at around 1730 UTC. Twelve of the network's 18 beacons are now on the
air and the next, ZL6B in New Zealand, should come on next month.

Ohio/Penn DX Bulletin No. 279

Thanks to the Northern Ohio Amateur Radio Society, Northern

Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C,

WA1YTW, KA2CYN, W4ZV, N5AW, W5ZPA, KH6BZF, K7WX, NL7TB, K8YSE,

WA0RJY, DF4RD, DL2HBX, DL3KUD, G4BUE & DX News Sheet, JA1IDY,

JF1SQC, LU6EF, OH7KD, VR2GO and ZS5S for the following DX information.

5X, UGANDA (UPDATE). 5X4DLI (Dave, KE4EW) and 5X4DEL (Dale, N3BNA) are now active from northwest Uganda, from the station of 5X4F (Paul). QSL 5X4DLI via KE4EW, 5X4DEL via WB3DNA and 5X4F via K3SW. They will join in a Multi/Single entry (using battery power) in the CQWW-CW Contest as 5X4F. Look for them 37 kHz from the bottom of the bands when possible.

C21, NAURA. JUST A REMINDER. Begin looking for the C21BH team to be active November 20-27th (activity also during the CQWW CW Contest) to celebrate Martti Laine's 50th birthday. Suggested frequencies: RTTY - 10130, 14082, 18100 and 21082 kHz.

HC, EDUADOR. Look for Bernd, DL1VJ, to be active in the upcoming CQWW CW Contest as HC1OT. Activity will be on all bands.

HC8, GALAPAGOS ISLANDS. Trey, N5KO (ex-WN4KKN), will be active as HC8N on all bands in the CQWW CW, and will be active as N5KO/HC8 before and after the contest. QSL via AA5BT.

HS, THAILAND. Jack, WA0RJY; Sam, HS0/SM3DYU; LA7JO along with several others will be mounting a Multi/Single effort with the callsign HS0AC during the CQWW CW Contest weekend. They have received special permission to operate on 80 and 160 meters, and they will be working on receiving antennas for those bands during the week prior to the contest.

JW, SVALBARD. The 'DX News Sheet' reports that Mathias, JW5NM, is very active on 160 meters (1820-1825 kHz).

OI, FINLAND. The SRAL has authorized OH7AAC to use callsign OI7T during both 1996 CQWW SSB/CW Contest. So look for OH7AAC to use the callsign OI7T in the upcoming CW contest as a Multi/Single entry. QSL via OH7AAC.

V3, BELIZE. The following group will be active from Ambergris Caye, Belize, from December 11-16th: Mike, W5ZPA (V31MP); Stan, W5JYK (V31YK) and Wondy, K5KR (call pending). Activity will be on CW, SSB, and RTTY. QSL to each home call with SASE.

V85, BRUNEI. Hajime, JO1RUR, will operate as V85HG in the upcoming CQWW CW Contest as a Single Op/All Band entry. QSL via BURO to JH7FQK.

ARLD051 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, The 599DX Report, DX News Sheet, Tom, N6RA, and Contest Corral from QST. Thanks to all.

MAURITIUS, 3B8. Jacques, F6HMJ, will be active as 3B8/F6HMJ from the QTH of 3B8CF from November 20 through December 5. He will stay on Reunion Island until the middle of December.

CYPRUS, 5B. Ted, 5B4OG, is active on 160 and 40 meters before his sunrise.

UGANDA, 5X. Joe, G3MRC, is active as 5X1P. He has been heard on 21024 kHz operating split between 1315 and 1400z.

BAHAMAS, C6. N6RA will be QRV as C6AHF from December 3 through 19. Look for him to be active during the ARRL 10 and 160 meter contests. QSL via N6RA.

SCOTLAND, GM. Tom, GM4FDM will be a 40 meter single band entry in the CQ WW CW Contest as GM6X. QSL via home call.

DODECANESE, SV5. Al, K7AR, will be active as SV5/K7AR from November 21 through 26, including participation in the CQ WW CW Contest. QSL via AA6BB.

CAYMAN ISLANDS, ZF. ZF2RF will be active during the CQ WW CW Contest as a Multi/Single entry on all bands. Operators include K4UVT as ZF2RF, K9LA as ZF2AY, K9MK as ZF2MK, N5HRG as ZF2HR and N9NS. Individual operators will be active outside

the contest on both CW and SSB from November 21 through 29.

QSL ZF2RF via K4UVT at PO Box 231240, Montgomery, AL, 36123

1240 with SASE or via bureau. QSL individual operators via

home calls.

> why don't you have a go at the FCC and get them to adopt the CEPT licence
> arrangements that so many Europeans (plus New Zealanders & Peruvians) enjoy.

Although implementation of CEPT Recommendation T/R 61-01 would be
better than nothing, it is a far cry from full reciprocal licensing.

I understands the structure of operating under CEPT, it's similar to
operating under an FCC Reciprocal Permit, where you get whatever
permissions are common between your own original license and the
privileges of the visited country's amateurs of the equivalent class
license. The major differences between CEPT and the FCC permit are
1) that you don't need to make any application under CEPT or get
individual permission to operate and 2) the US restrictions on only
giving permits to people who are citizens of the same country that
issued the original license and never granting permits to US citizens
are quite absent from CEPT.

What I would much prefer over the prsent CEPT rules would be some
system of full reciprocal licensing whereby the visitor enjoyed all
the privileges of the equivalent license holder in the visited
country. That's what a US General Class or higher will enjoy if they
receive a UK reciprocal licence [note different spelling :-)]

The CEPT/FCC reciprocal permit method of awarding privileges results
in quirky patchwork privileges where, say a UK amateur gets to
operate in the US on much lower power than domestic amateurs and
never gets to use 75m most of 40m and half of 6m and 2m (and the half
of 2m lost includes just about all repeater access) and all of the
1.25m and 33cm bands.

And in reverse a US amateur under CEPT would be denied use of our own
4m band (not a big loss) and also phone use on all of 80m (that is a
big deal as we don't have a 75m band) and important phone parts of
all the other non-WARC HF bands which they presently get to enjoy
under the reciprocal licence.

The big winner under CEPT would be US Technicians who, for some
unexplainable reason, are denied UK reciprocal licences even though
the FCC does issue reciprocal permits to the equivalent UK Class B
licence holder. This particular situation is VERY unfair, IMO.

1844. Macintosh Ham Radio WWW Site

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-28 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-2811960619000001@wd1v.mv.com>
Source record: 211909

A trip to my home page reveals there are many good files and programs for amateur radio operators that want to use Mac computers.

<http://www.mv.com/ipusers/wd1v/>

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Roster - a virtual "Who's Who" HyperCard stack with more than 780 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and their passions and put a design on your Mac Radio future when you see what neat things are being done!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lot of links to great Mac FTP sites for radio, electronic engineering, and similar data.

|>mcf@earthlink.net
I have found an island of peace, brotherhood and helpfulness in the mileu of fussing and fighting on the ham bands!! Where?

Surprise:
A) It has come about over the Internet - primarily due to joining two Groups:
1) rec.radio.amateur.boatanchors
2) The GLOWBUGS mailing list.
If you need info on either, let me know!

Since joining these groups I have met the most helpful , generous and friendly hams I have found in the past 10 years!
These are mostly folks that restore older ham gear, work AM and CW, and like to build their own tube QRP CW transmitters and regenerative receivers etc. etc.

What I found is that they will spend hours explaining things,
they will spend their TIME with you. They will send you schematics and parts if you need them, sometimes at no charge.

3) My local radio club, where I met some great hams that love the hobby, and managed to go home with a BIG box of free tubes etc., because a guy was clearing out his shack and just needed space & wanted to help others.

Not EVERYONE has $2-3000 to shell out for a new FT-1/IC-9999 etc., and there is a LOT to be siad for building your own equipment. It puts everyone on a level playing field regardless of income (more or less) and brings back some of the FUN dimension of amateur radio that many of us enjoyed in the 1960s and 70s before the FCC deregulated the hobby to death or the CB'ers showed up in mindless droves (apologies to many ex-CB'ers who ID make the effort to become good hams!)
QRM is nothing new.Ungentlemanly and unethical conduct among hams is newer, and has no place in our fraternity.

73 to all, and to all a Happy Thanksgiving Day!

As soon as the snow disappearts from the scenery here in Montreal, I
bike a lot and of course I like having my Icom IC-W31 with me at all
times.

When on my bike, I also carry a small good quality backpack which has
a good stable harnest system (with waist belt). So, the radio goes in
the utility pocket on the backpack, rubber duck antenna sticking out
the top.

For speaker and mic arrangement, I use the large HM-54 speaker-mike
which I clip on my pack's left shoulder strap. It's stable, loud and
I reach all the repeaters I want to use.

I have nothing mounted on my bike as it is a mountain bike and it gets
a really rough ride (I like to offroad a lot!)

It there still a place ont eh 610 for the actual station location. As I remember the P.O. Box would not qualify for the actual station location and the Amateur had to tell the FCC where his station was phiscally located in the event of him causing some problems or for inspection. I wonder if the QRZ and such are only given the mailing address ro the actual delcared station location?

No, I call that electronic assembly. You said people would only buy
appliances. That's not true. The number doing their own original
designs may be relatively small, but the number of people building
equipment is still large. And that's considerably more than appliance
ownership.

I have a portable Antenna Analyzer for sale.
It is a portable unit run from NiCad batteries with charger. It uses a LCD 4 digit frequency counter, an analogue SWR / %reflected power scales read direct.
No radio Tansmitter needed. It sees exactly what the radio sees.
Only R2200-00. Still under guarantee. Used only once.
Ideal for the antenna experimenter.

I admit that I haven't been involved with coordination for several years now, while finishing school. However, back in the early 90s, TASMA seemed like a pretty good group: any ham could join and vote, and under its stewardship 2 meters has florished. Has something happened to TASMA since then?

Message-ID: <329E1E1E.60BD@netcom.industry.net>
Source record: 211930

I just bought a CP50 from a dealer in California, and notice the CP50 has only one pl to select throughout all the channels. Is ther a mod so I can have more? Does the CP50 offer multiple pl's on separate channels?

Greetings,

I am still looking to buy or build a Kenwood IF-10D interface for my TS-60s all-mode transceiver. This interface mounts inside the radio and serves as a buffer between the radios digital board and a level converter such as Kenwood's IF-232C interface. I am building my own level converter from readily available plans, but I have not been able to find any plans or specifications on the IF-10D.

If you have information on this interface, or have an IF-10D you would like to part with, please leave me a private Email message and I will get back to you.

All reply's will be answered.

Thanks for your time.

Mike, N2QAC.

AS I SEE IT

1) The last hamfest I attended was packed and well
organized.
2) Burt is WRONG. (And has a lousy attitude).
3) If ham radio is going downhill, it's our own fault.

Hi Frank,

I can't think of any hamfest in this region of the country that have a hamfest the size of Dayton. Of course, most of the ones I go to are generally in the N.E. Ohio area.

I heard the reason for the move to mid-May is because of the past bad weather that the hamfest has had. I know personally that the last two times I went there, ('92 and '93) it was a high in the mid-50s and raining. Supposedly, the move was to avoid bad weather.

As for the price increases, a jump from $60 to $110 is a tad outrageous to say the least. It looks like they want to edge out the little guy and just make room for commercial dealers. Admission prices are way up as well. I remember ny first trip to Dayton in '81. The cost of a ticket was $7 in advance, $8 at the gate!

Of course you are correct. The fact she is a ham is of course
immaterial to the fact we discuss it here. We are far better served to
discuss
ham radio traffic, cw, contests and other such items of world
importantce.

If course not we have stopped intelligent thought provoking conversation
on ham radio, why not do it here.

>coordinated.

Interesting how some folks kind of decide to decide who is making
an argument, then launch an *ad hominem* attack on that position,
being unable to formulate an argument without resort to fallacy.

Then again, they decide to argue against a position other than
the one stated, because they have no arguments against the one stated,
at least none that don't stick in their craw.

>This thread gets started about every 7-8 months - just about as often as

Hi Doug VA3DMB

Bill N5WO on this end

I'm fairly sure what you have is 75 ohm cable TV coax. It is used to make the main cable runs fo a CATV system and works very nicely on the VHF and lower ham bands. In fact the stuff you have with the plastic jacket is the best.

We have used the stuff for years on VHF repeaters both rec. and trans. If you want to get technical there is a mis-match 50 ohm as compaired to 75 ohm but, it generaly won't cause any great problems below UHF. And, I might even use it at UHF freq. if the run was fairly short, say less than 150 ft., and the other choice was one of the RG-8's out there. If you were choosing between say Belden 9913 or LMR-400 I would choose the last.

As for the connectors there are commercial ones out there but, they are not for the faint at heart. The will cost you big bucks. Likely over 25.00 per connector. We have used, with good luck, a standard PL-259 connector on this cable with pretty good luck. Just remove enough of the jacket to expose the center cunductor to a length that will go out the end of the PL-259, you can solder the center conductor it should be copper or atlest copper clad. Now the shield is a little tricky. You need to remove the dielectric between the alum. shield and the center conductor. Clean it out for about 1/2 inch or 5/8's at most. Now remove the black plastic cover, about 1 inch should be fine. Take a hack saw and make several cuts in the alum. shield so it can be clamped down on the end of the PL-259. The cuts are to be made with the parallel to the cable longwise. Now come the tough part. You need to install the PL-259 (complete) on the cable so the center conductor

extends out the end of the connector and so the shield comes up on the shoulder of the other end of the connector. However, be carfull not to bind up the workings of the threaded sleeve on the connector. Take a hose clamp, on of the screw clamp types, and cause the alum. shield to compress down on the sholder of the connector. Anyway it all works and it's a cheap way to make a connector for this stuff. This type of connector workes beter on the 1/2 inch verson of the same cable.

Well, this is possibly much more than you wanted to know if so throw the un-used part in the bit-bucket.....hi hi.

Check with you CATV venndor in the area, best to find the guys that take care of the lines they should be able to help you with this cable. As for what it's worth, sorry to say possibly not much if it has found its way to the surpluse market. However, if you need to put up a VHF repeater and need some hard line you may have a small gold mine.

Hope this helps

Bill Wyatt N5WO
Woodward, Oklahoma USA

BTW be nice to the cable guys they might just give you a couple of ends for your cable.....never hurts to ask.

Rubbish.

Never, once, have I heard or seen anyone on the 'open repeater' side of the argument that they have no responsibility to assist in the support of machines which they regularly (and I say *regularly*) use.

Not once.

Have you, MD? Please quote, then. If you can find one, I'd lay odds that you can't find many.

No, the substance of the argument is that, in crowded bands, no group should have a mandate to hold and control a pair of frequencies, to the exclusion of other hams. And that those who want to form a private clique, with the ability to 'blackball' 'those people' from a scarce resource, ought to do so where there is a lot of space--- even if it is at substantial technical and financial cost.

Gee, what's wrong with that logic?

>For several years I was a board member and general officer of
>Rhode Island's largest ham radio club. The organization became
>ineffectual at dealing with any problems whatsoever, including "base"
>members monopolizing the repeater for hours on end without allowing
>other mobile stations to use it.

Gee, sounds like there was a band-width problem.

Looks like more was needed (i.e., another machine).

Or a specific charter for the machine.

>The rallying cry of those ill-mannered hams who were inconsiderate
>of others: "I paid my $20. I bought the right to use the repeater
>whenever and however I want."

Um, so who bought the right to tell them they couldn't? And for how much?

>Now, you and I know this is a bunch of BS, but the other morons who
>were in the club couldn't realize this, and refused to grow a serious
>set of cahonas to deal with the problem the way they should.

Seems to me that there's a fundamental problem with a club full of 'morons.' Or of the way some members view others.

>So, the last I knew, membership in the club was down from an all-time
>high of roughly 350 members to 150 members as of a year ago, when I
>let my membership lapse in disgust.

MD, the problem wasn't, I submit, with the repeater. It was merely a symptom of the problem of a bunch of guys who really ought to treat other members of the ham radio fraternity better (especially those with whom they shared an organization).

>My point is this: There are many good reasons for not wanting to
>"open" up a repeater. For one thing it makes problems easier to deal

>with.

Or to 'not deal' with.

But no problem... ...you'll probably have to (some day soon) trade 'not dealing' with those problems by dealing with the problems of putting a machine up above 1Ghz somewhere. You pays your money, you takes your choice (assuming 144, 220, and 440 are croweded in your area).

>Yes, technically if a repeater is "open" or "closed" the
>trustee's regulatory privileges remain the same. However, it is
>exceedingly frustrating to deal with people who are morons and cannot
>comprehend basic English.
>
Hmmm. I'm not sure I'd vote for someone with your level of positive regard for his fellows as the person to deal diplomatically with the problems of a shared, limited resource. So perhaps a closed machine is better suited to your purposes.

>A spectrum management organization is in no position to determine
>what constitutes "sufficient use".

But they must become so, if they are to be credible. The technology exists for measurement. And it is possible to set standards. I have no problem with declaring that no carrier for 23.75 of 24 hours on an average day is a waste of spectrum.

I always liked the text " Electronic Communication " by Robert L. Schrader
It is good for the GROL and Amateur licenses. It is easy to read, brings out
the basic concepts of radio. The text is published by McGraw-Hill. The last I
looked at Barnes and Noble it was about $ 65.00. This is all I used for my GROL
with Ship radar license and also my Advanced Amateur license. I tested before
the FCC in the days when I had to figure out what I might be asked sylabus they
provided. There were no Q and A manuals for the Amateur license.

In the 1st segment of this sunday's (12-1-96), Ham Radio & More Show,
callers will be asked to rapidly vote for or against a code-free
General Class License. No reasons to be given, no specifics as to "I'd
be for it if...." or "I'm against it if it will...."; merely an, in
principle, yes or no. As a follow-up, on the Ham Radio & More Shows of
December 22 and 29, this will be the only topic and each week will
focus ONLY on people for the code requirement one week and against the
other week.
The toll free number to call-in during the show is 1-800-293-5366.
Show info is below or check the new and improved home page at:
http://www.goodnet.com/~lenwink/hrm.htm

>Never, once, have I heard or seen anyone on the 'open repeater' side of
>the argument that they have no responsibility to assist in the support
>of machines which they regularly (and I say *regularly*) use.

Specifically said? No, of course not. (Too politically unpopular).
However, that is the unspoken implication.

"All repeaters must be open." That is the claim. To wit, I ask: Why?
The answer is usually something like the "public good" or some form
of communistic answer, usually, like "the needs of the many outweigh
the needs of the few".

>No, the substance of the argument is that, in crowded bands, no
>group should have a mandate to hold and control a pair of frequencies,
>to the exclusion of other hams.

Whether you like it or not, the FCC, in 97-205(c), has given the
repeater trustee >exactly< that power, in repect to the repeater's
operation on that pair of frequencies. This has further been
reiterated and clarified in official letters from the FCC.

>And that those who want to form a
>private clique, with the ability to 'blackball' 'those people' from
>a scarce resource, ought to do so where there is a lot of space---
>even if it is at substantial technical and financial cost.

Your language betrays your true intentions. What you're really
upset about is not a private repeater, but the fact that someone
might not let you play on their playground.

An "ad hominem" attack is a personal insult. "Lots of new hams" and
"some people", the last I knew, didn't qualify as a person.

>>One reason I keep my repeater "closed" is I do not want to hear the
>>words
>>
>> "I paid $25 to sponsor this repeater. Its my RIGHT to use it."
>
>Gee, what's wrong with that logic?

For one thing, you have no "rights". You have "privileges" that are accorded to you by the terms of your license. The privileges of the repeater trustee, specified in 97.205(c), supercede your privileges to use the repeater station. Furthermore, the FCC specifically prohibits people from engaging in activities on amateur radio where they have a pecuniary interest. Thus, "selling" access (i.e. a contract for usage in exchange for renumeration) for profit is specifically prohibited. Thus, payment for use of a repeater cannot be construed as creating a contract.

>>For several years I was a board member and general officer of
>>Rhode Island's largest ham radio club. The organization became
>>ineffectual at dealing with any problems whatsoever, including "base"
>>members monopolizing the repeater for hours on end without allowing
>>other mobile stations to use it.
>
>Gee, sounds like there was a band-width problem.

No, this wasn't the problem at all.

>Looks like more was needed (i.e., another machine).

The last I knew there are dozens of others in the area that are underutilized.

>>The rallying cry of those ill-mannered hams who were inconsiderate
>>of others: "I paid my $20. I bought the right to use the repeater
>>whenever and however I want."
>
>Um, so who bought the right to tell them they couldn't? And for
>how much?

The trustee is granted the privilege, in 97.205(c), to restrict access however s/he sees fit. Period.

>Seems to me that there's a fundamental problem with a club full of
>'morons.' Or of the way some members view others.

Such is life in a section of the country where a significant portion
of the population is lucky to have completed high-school.

>MD, the problem wasn't, I submit, with the repeater. It was merely
>a symptom of the problem of a bunch of guys who really ought to
>treat other members of the ham radio fraternity better (especially
>those with whom they shared an organization).

I don't disagree with you, but your point falls on deaf ears.
Their claim is once they've paid their $25 dues, they can do whatever
they want and be as rude as they want (as long as they don't violate
any rules) since they've "paid their money and bought the right to use
the repeater".

>But no problem... ...you'll probably have to (some day soon) trade
>'not dealing' with those problems by dealing with the problems of
>putting a machine up above 1Ghz somewhere. You pays your money, you
>takes your choice (assuming 144, 220, and 440 are croweded in your
>area).

Nah, see, I've been coordinated as an "open" machine for almost as long
as I have had a license. But, I also understand the implications of
97-205(c). Anyone I don't want using the machine gets a letter. Should
I decide to make that 2970 out of 3000 amateurs in the state, thems my
privileges accorded to me by 97.205(c). A volunteer spectrum management
association cannot usurp privileges accorded by a federal agency, and
cannot tell me to act contrary.

>Hmmm. I'm not sure I'd vote for someone with your level of positive
>regard for his fellows as the person to deal diplomatically with the
>problems of a shared, limited resource.

I'm not a diplomat.

>But they must become so, if they are to be credible. The technology
>exists for measurement. And it is possible to set standards. I have
>no problem with declaring that no carrier for 23.75 of 24 hours on
>an average day is a waste of spectrum.

That's awfully big of you. You should apply for Godship status with
Zeus Carl, King of The No-Code HF License.

Utility to the amateur community is a strange thing to measure.
Sure, my machine may be inactive 23 out of 24 hours, but it also
has several things that make it very unique. For example, it is stationed
with a whole bunch of other 460mhz machines (in other words, it is
located at the same location where a local public safety organization
houses their repeater systems) and has 24-hour emergency power.
So, the next time a hurricane comes up the cost and takes out all
them "open" machines being run out of people's houses, my machine

will be purring along nice and quiet-like with full power. I'll be really popular then, since there are only four or five other repeaters in the area that can make a similar claim to fame.

So, as is clearly seen, "usage" is only one definition that you can use to determine utility. It is also a poor one, since it for all intents and purposes does not fulfill any purpose of the amateur radio service as outlined by 97.1.

I, on the other hand, with my de-facto closed repeater, am directly serving an important aspect of amateur radio, specifically, 97.1(a)

I would like to find a good 2 Meter rig. Perferrably an ICOM but would
take a Kenwood at the right price. Here is what I need.
50 Watts out.
20 + memories
Tone Encode
Be able to scan from 130-175 MHZ
Am also interested in a Dual Band 2/70CM
That same as above with
Tone and able to scan 440-470 MHZ also.

Frank,

Nothing is of comparable size. Sorry, but you just missed the best hamfest in the
the area, Fort Wayne. Over 7000 showed up two weeks ago, at the 24th annual
show. Gordon West was a speaker, Kenwood was there with their latest, Standard
was there, actually all the tables(about 500) were sold out.

It doesn't have the madness of Dayton, but that's kinda refreshing. I was trying
to think through why it is so popular with the vendors and the buyers. Of course
this is only my opinion, but it's because a hams'fest! The whole thing is put on
by HAMS. All security, parking lot, guides, all HAMS. Dayton I feel, had gone out of
control, and they turned to 'stickons' to run that show. Too big for the locals to
handle. Fort Wayne on the other hand, draws HAMS from surrounding clubs and
it works just super. See you there next November.

The Dayton Hamfest has outgrown the facility it is held at and there is noo room for it to expand at it's present site. Every year they try "shake" and "pack" the "box" a little tighter to to get the vendors inside. Because of this and the overcrowding and poor parking provided interest and attendace is suffering. Until the powers to be realize this and move it to another site (even if it means holding it in another city with better facilities) it will continue to suffer. It is sad because given a better facility with a lot more room the Hamfest could easily grow much larger and be a more pleasant experiance to attend and profitable for the vendors. If there ever was an incident or indoor fire at the present site there would be alot of people injuried because of the overcrowing. It is surprizing that local fire marshalls allow this to continue. Politics as usual. By the way as I hear it profits were down this year and expenses were up (damage, if you can believe it, to the parking lot by busses!!) hence the need for higher rates to help pay for the folly.

I have also heard there wasn't as much attendance last year. Various
explanations have been offered including the date change causing
schedule problems for some. (but IMHO the date change was a good idea
-- going to Dayton in the snow isn't much fun!)

>Is there another Hamfest in the Ohio, Ind, Pa, Wva, etc area of
>comperable size I should consider attending??

Dayton is the largest hamfest in North America. I have attended some
good ones in Chicago (Radio Expo in September).

>>you have lots of private liability insurance.
>
>Nonsense. The courts have not determined that closed repeater trustees
>are a "protected class." Nice try, though. 10 points for creative thinking.
>Zero for legal knowledge, though.

Indeed, hollering 'discrimination' is pretty risky, when you have
a circle of friends trying to protect their 'turf' on public property
from an open organization. After all, I'd be willing to bet that
most of the 'old boys' clubs wouldn't stand the scrutiny of a state
Civil Rights commission too well, as against an open, regional, user
group.

A good lawyer would probably give that one a very wide berth!

In fact, contention that a user of a public frequency discriminated
on the basis of race, creed, national heritage, or accent might be
a pretty good 'monopoly busting' tactic.

>>2. I start an alternative organiation: "The Closed Repeater Coordination
>>Society", and issue coordination certificates to anyone who pays the
>>$10 annual membership fee. Since the FCC does not recognize one
>>coordinating body over another, the closed repeater's coordination now
>>has equal standing with your coordination certificates.
>
>True, but at least the closed repeater weenies wouldn't have sole
>standing, as they do now in Southern Cal.

That's why there needs to be some litmus test for legitimacy of
coordinating bodies, as well as a means to challenge that status.

>True. However, your coordination could be pulled as per the by-laws of the
>coordinating group. Nothing new about that, pal.
>
>>This activity has, and will, ultimately wind you up in court.
>
>Nonsense. Bosh and tish.

Oh, it probably will. People pretty zealously protect their 'turf.'
However, it may be necessary pain.

>>Who determines when a repeater is "not in compliance" with this 10%
>>usage rule? Does the coordinating body have the burden of proof?
>
>Sole discretion, Mike, not burden of proof. Notice, hearing, and decision-
>making authority will get you by.

Indeed, endorsement by the ARRL (or a body formed thereby) will be a
pretty good argument in favor of a body's coordination authority.

Dave,

the frequency should be legal, but not reasonable.... The 27MHz band is
extremely abused, there's users everywhere, and a lot of them are kicking
out 50, 100, 800 watts off un-adjusted amplifiers... If you're using a
remote contr. car, it's not too bad, you'll loose control once in a while,
but if it's an airplane... You might want to use the 49MHz band, or the
60something one.

It may be true that the parties involved in this flaming/historical re-creation are hams. But it is my sincere opinion that such discussions have no place in ham-related areas.

Such discussions sould take place in an area dedicated to history, or in this particular case, flaming. An area such as this sould be reserved entirely for its intended purpose - ham-related discussions.

I recommend that the involved parties move such trivial banter and flaming to a more appropriate area, and leave this area in peace. Such behavior in this newsgroup is the kind of behavior that destroyed 11 meters.

<text deleted>
The CEPT/FCC reciprocal permit method of awarding privileges results
in quirky patchwork privileges where, say a UK amateur gets to
operate in the US on much lower power than domestic amateurs and
never gets to use 75m most of 40m and half of 6m and 2m (and the half
of 2m lost includes just about all repeater access) and all of the
1.25m and 33cm bands.
<text deleted>
The big winner under CEPT would be US Technicians who, for some
unexplainable reason, are denied UK reciprocal licences even though
the FCC does issue reciprocal permits to the equivalent UK Class B
licence holder. This particular situation is VERY unfair, IMO.

I am not a ham. (I read the posting on rec.radio.shortwave.)

I can see a requirement for some sort of extra skills that distinguishes
an amateur radio operator from someone who just goes to the store and
purchases a transceiver and an antenna.

But, there must be a whole range of possible skills which would be far
more relevant to communications technologies at the beginning of the
twenty-first century than is the ability to send and receive morse code.

Perhaps potential hams should have to take a Chinese restaurant family
menu of tests (one from column "A",...) with the morse code requirement
being just one of the potential advanced or hands-on-type requirements.

>location?

The FCC no longer requires you to give them a station location on
your license application. This is an acknowledgement that the majority
of amateurs no longer establish fixed stations. Nor do they require a
call sign change when you change districts. This recognizes the mobile
nature of the population, IE few people today maintain a fixed address
for the duration of their license term. Nor do they require you to
notify the EIC when you operate portable. Again this is a recognition
of the mobile nature of modern society. All they require is a valid
mailing address to which they can mail the license. That's a matter
of practical necessity.

I think you're wrong in seeing any difference between a right and a
privilege. They both indicate that something permitted to one person
by another. Is a right more permanent? And if so, by how much more
time? Maybe you'd like to propose the two very different definitions
for the two words and then we can test them against, say voting by
white men and by black women or drinking alcohol. These are now
allowed but have not been from time to time. Is a right-of-way a
right or a privilege :-)

>saved by these abilities than have ever been saved by code!

The ability to swim 100 yards won't save squat unless the swimmer knows what do upon arriving at the victim and is strong enough to swim the victim and himself back to shore. Lack of training and endurance results in a "double drowning."

Running one mile under 10 minutes won't save anyone unless the runner also continues to work out daily, doesn't smoke, and eats in a healthy manner. Ever hear of the runner/author Jim Fixx? He wrote the books that began the running craze in the 70s, then promptly died due to a smoking-related illness. He'd smoked for 30 years prior to taking up running!

And nothing you mention will enable a ham to communicate with others thousands of miles away with equipment he's built himself from scratch.

Now, can you actually tell us how many lives have been saved by the code? Dozens? Hundreds? Thousands? Consider that code was the primary mode for all shipping from the teens well into the 80s. Do you know how many ships plied the oceans during that period of time? Do you know how many WX bulletins warning of severe storms were transmitted to shipping from shore stations during those decades? Let's not forget the thousands of ice sightings transmitted from ships to all shipping during that lengthy period. Now can you estimate how many lives were saved by the code?

Not enough for you? Maybe a trip through maritime archives documenting the thousands of distress calls send and answered during those 70-some years will convince you of the worthiness of code in saving lives. You're obviously unaware of the system that was adopted (500 kHz from sundown to sunrise, 4 and 6 Mhz during grey hours, and 8,12,16,22 MHz during daylight hours) which provided transoceanic comms at any hour of the day or night. I couldn't stand a full CW watch without some call for help coming in, whether it be a medical aid, engine room fire, man overboard, or the more rare case of a total disaster.

You have absolutely no idea of what you speak. Were you trying to be funny? You're just like the dozens of others on here who post stupid comments and skewed opinions. You've done a great disservice to the corps of code operators, both shipboard and shoreside, who've saved countless lives during this century.

Jeff KH2PZ (who's held 3 Hawaii state swim records, run a marathon,
was a US Coast Guard CW op, and currently homebrews CW equipment)

Reading that makes my eyes hurt.

What do you mean by "lottery"? It was made public that Day N applications would take priority over Day N+1 applications. But nothing was mentioned in regard to X-hour apps being handled prior to X+1-hour apps that arrived on the same day. If you truly believed that an earlier time stamp on Day One would have gotten you closer to your desired calls, then why didn't you file an electronic 610V at 0001 EDT on Day One?

Please don't sue me for pointing out that you're a whiner. (And hit your return-key sooner.)

> Tom Bowles W7VA bowles@halcyon.comMany many years ago, we used to use a soft lead pencil to restore a worn
track. These days, you can't guarantee that a pencil has graphite lead in
it and a plastic "lead" would make things worse.

I've even distorted the rotor of a pot to make the sliding contact track
on an unworn part of the track.

However the best solution now (and even then) is/was to replace the pot.
Which I will agree is not always possible.

73,

Jim, ZL2APE.

1919. Re: Twilight of amatuer radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-29 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Nov29.143704.25712@ke4zv.atl.ga.us>
Source record: 211741

In article <32972874.421B@io.com> kk5dr@io.com writes:
>Are we witnessing the "twilight of amatuer radio" ? Is amatuer radio slowly dieing from its "bloated" buracrecy, poor operators, and choking on it's own excesses ?

Well, there is some cause for concern about the growth of "amatuer" radio. That sub-genre does seem to be growing at an alarming rate. And it does tend to reflect negatively on the *amateur* radio service.

Subliterate "amatuers" are growing more visible in the amateur radio service. They exhibit a woeful lack of knowledge of information theory, signal design, modulation and coding, etc. And today's "amatuer" seems unable to grasp simple design and construction practices using VLSI circuits. Even simple operating practices and courtsey seem to be beyond these "amatuers".

Fortunately, most of these "amatuers" seem to confine their activities to HF, like their brethren in the CB service, or hide out on closed repeaters like their GMRS cohorts, and haven't yet infected the bulk of the amateur radio service.

> I see a tangable & difinite trend towards a lack luster, "sub-standard", absence of collective purpose, in it today, and noticable over the last 10 yrs.
>
> Todays "on-the-air" amatuer radio public image, is tarnished, to say the least. Very few amatuers perform public service, or regular public image polishing. Most amatuers occupy their on air time with useless idle chatter, or even bad operation & manners. What does the public think, when listening to this type of "counter produtive" activity ?

The public generally knows nothing about these "amatuers". That's because the public doesn't listen to them. If the public has any inkling at all, they simply think that these "amatuers" are just CBers operating with higher power, and making odd beeping noises from time to time while interfering with their TVs, cordless phones, and other consumer electronics. And in that perception, they are entirely correct.

Unfortunately, in the public mind, the activities of these "amatuers" are often confused with the activities of amateur radio operators, and the latter suffer because of that confusion.

1920. Touch Lamp noise

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-29 00:00:00 UTC
From: ekugrad@mindspring.com
Message-ID: <57mrok$trr@camel4.mindspring.com>
Source record: 211742

My XYL bought a pair of touch lamps last week, and they generate an S8 noise level, even when they are turned off. They turn off and on when I transmit.

Has anyone had any luck eliminating these problems.

Thanks for any help.

>for the two words and then we can test them against, say voting by
>white men and by black women or drinking alcohol. These are now
>allowed but have not been from time to time. Is a right-of-way a
>right or a privilege :-)

All rights are inherent, in-born, they are a property of your
existance, dervable from first principles. They can be neither
granted nor denied, though they can be abridged by the use of
external force. Rights cannot, by their nature, require a taking
of rights from others. This is what the US founders meant by rights,
and is an outgrowth of Enlightenment philosophy.

Privilege is something granted by arbitrary temporal authority.
It can be granted or denied at whim, and is maintained by force,
or implied threat of force. In general, privilege can only be
granted by abridging the rights of others. So it is in that
sense always immoral.

"Rights" has become a corrupt term over the last few decades
as people have arrogated to themselves "rights" which are not
inherent or dervable from first principles. What they are
really saying in many cases is that they want the boon of
privilege over others, a taking or restriction of the
exercise of rights of others for their benefit. And that
is always immoral.

1923. Juke Box--information needed

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-29 00:00:00 UTC
From: Steve Eklund <72527.01012@compuserve.com>
Message-ID: <b1d7cc$ac35.30e@NEWS>
Source record: 211745

Hi all,

I was given an old juke box by a bar owner. The problem is that the manual is missing. I actually repair juke boxes on the side, and due to my experience with them I got it to work, but the problem is that I am not totally familiar with the model and need the manual to obtain programming and adjustment information.

Forgive me for posting this to this newsgroup, but I don't have the faintest idea what newsgroup would more closely match this subject. Perhaps somebody knows of a newsgroup more suited for juke box owners? If so let me know.

The juke box is a Rowe/AMI model R-91. It is a hybrid model that plays 80 45 RPM records and also has a 6 disk Pioneer CD player retrofitted to the unit by the mnanufacturer. I figure that it was built somewhere between 1985 and 1987. Most juke boxes today are CD only and hold at least 100.

If anybody has any information, please let me know. I would like to get it ready by Christmas eve. I think it would be a smash with the people I plan to have over during the holidays!

Thanks in advance and 73 from Steve

>Hi, was wondering if US hams can legally transmit in the UK??.

Quite simple... you need a reciprocal license.

Call the Radiocommuications Agency's Licensing Center at: (from the
US or Canada) 011-44-171-925-8333

You can write to them at:

Radio Licensing Center
SSL
PO Box 884
Bristol BS99 5LF
England

The cost of the license is £15 and it's valid for 6 months.

It's quite easy and the people are very helpfull... I just wrote in to
get a Canada-UK reciprocal license for the Xmas holiday season and it
was a snap.

1930. Elections in Serbia

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-29 00:00:00 UTC
From: gerber@eunet.yu
Message-ID: <32a30e70.1291273@news.eunet.yu>
Source record: 211752

If you would like to help in downfall of the last communist regime in Europe, in YUgoslavia, where hundreds of thousands are, for the tenth day protesting on the streets in all major cities of Serbia, against regime of Sobodan Mislosevic, cut this letter below (or write your own) and send it to your Congressman.

Honorable gentlewomen and gentlemen,

Please help defeat the last communist dictator in Europe !

Serbia is currently undergoing its first significant test of democracy in over 50 years. At the local elections last week, democratic opposition had handily won in the majority of large towns, including the capital, Belgrade. Milosevic and his ruling Socialist party thus suffered its first loss, and the first defeat of communism in this country since WWII.

Of course, being communists, Milosevic's cronies begun an immediate campaign to reverse the loss by massive cheating, ballot box-stuffing,

intimidation, open forgery and rigging, and, finally, vote nullification by communist-controlled courts. In Belgrade, the opposition coalition Zajedno (Together) won 70 out of 110 seats, with Milosevic's SPS winning only 26 seats. A week later, communist courts

have nullified 45 of the 70 opposition seats. In the second-largest town, Nis, electoral commission had not only nullified the opposition gains, but had actually awarded some of those seats to Milosevic's SPS. Such examples of criminal activities are countless.

This has been met with over a week of massive protests, strikes and civilian disobedience. As of now, hundreds of thousands of people are in the streets of Serbia. I appeal to you to strongly support this democratic outburst, and to influence the administration to apply its strongest pressure on Milosevic to reverse his criminal actions. Don't let another Tienanmen happen! Only democratic Serbia can guarantee the peace and stability in the Balkans. Its people have spoken, please help this voice be heard and honored, in the name of basic human rights, freedom and dignity !

Sincerely Yours,

Regards,
Ivar http://sezampro.yu/~gerber

I assume you are also in favor of supplying high-quality AC power to
those areas of the world that currently use battery power to run their
radio equipment, and buying them radios to replace the homebrew rigs
which are all they can afford - rigs that are CW-only.

Or do we stop speaking to them?

And where do we get all the power to run RTTY/TOR/SSB in a long-term
emergency? If all you got is 12 volts, and no probability of AC for the
forseeable future, you might just wish you knew a little outmoded CW.

In <gregE1LtpL.6IC@netcom.com>, greg@netcom.com (Greg Bullough) writes:
>No, the substance of the argument is that, in crowded bands, no
>group should have a mandate to hold and control a pair of frequencies,
>to the exclusion of other hams. And that those who want to form a
>private clique, with the ability to 'blackball' 'those people' from
>a scarce resource, ought to do so where there is a lot of space---
>even if it is at substantial technical and financial cost.

Greg, this is a superb and succinct summarization of the argument against closed repeaters. Frequencies are scarce and precious, and should not be subject to monopolization by any limited group of radio amateurs. As you say, no one doubts that a repeater trustee should be allowed to ask for help to keep the repeater running. In my experience, there is no shortage of hams willing to support their favorite repeater with either their time (sweat equity) or by chipping in financially. In fact, a trustee who can't elicit such support if he needs it probably isn't running a very good repeater, and doesn't deserve to be coordinated.

Closed repeaters fly in the face of everything our hobby stands for. They should not be coordinated. SCRBBA should not be recognized as a valid coordinating body, and its classifications of frequency pairs should be disregarded.

Echoing Jim....Almost any Icom-compatible battery should work so long as the rails and the + and - terminals are the same. Also, with the popularity of that radio the aftermarket battery people (see QST ads) are building high capacity packs for them. I saw a whole display at the Yost battery booth at the Tampa Hamfest two weekends ago.

> de Mike/KN6VS

It's been a couple of years since I've used them but, try this:

Input	Output
29.520	29.620
29.540	29.640
29.560	29.660
29.580	29.680

I have used one located somewhere in the Virgin Islands.
*** The input to that repeater was FM. It used to be pretty active.
That's about all I can tell ya right now. I was just thinking
about trying them out again myself. Maybe now I will. See Ya!

>
> Greg

Greg,
You are so very right. Not one of the post has ever indicated they
should should be able to use a repeater as a god give right. The
main argument has been the fact that the freq pairs are tied up by
"private" users or just "paper" users. We all understand that it
cost some real money to put up and maintain a repeater, and if we
are as you put it "regular users" of a repeater, than we should assist
with the financial maint of the repeater. It seems thet only argument
that the other side has come up with has been "well thats the way its
always been" and the cry that the "newbies" want it all for nothing.
I think the they should take a better look at the so called newbies.
they now represent the majority of users and are probably the only
reason this hobby has grown in numbers the way it has.

Too bad nobody has claimed that having closed repeater coordinating
grants them exclusive use of the frequency...

>SCRBBA should not be recognized as a valid
>coordinating body, and its classifications of frequency pairs should be
>disregarded.

That's okay. The Closed Repeater Coordination Society will recognize
and honor all closed repeater coordinations currently in existance,
even if other groups do not.

The receive section of my FT900 has died. The transmitter still works (and the antenna checks out fine). I reset the microprocessor but still cant even hear strong nearby AM broadcast stations. Anyone have any similar experiences with this radio.

It is still under my Gold Card double warranty period (by 10 days!) so I have no problem returning it to Yeasu for the repairs, but thought I'd check for similar experiences first.

You didn't name Maryland, but we're between WVA & PA. The Greater Baltimore Hamboree & Computerfest, Host to the Maryland State Convention of the ARRL is April 5-6 just north of Baltimore, near I-83 & I-695. Last year's attendance was something close to 11,800 on Saturday, and about 8k on Sunday.

Convention speakers are being lined up now.

Check out http:\\www.concentric.net\~Gbhc There is full information including pricing, a map, hotel information and an order form you can print off. There are several sales areas: Commercial, Electronic Flea Market (low-rent tables area), and indoor and outdoor tailgating - No tables in tailgating area are provided. .

(For those wishing to attend: Weekend admission passes advanced sale discount is $8 for those wishing to attend. Be sure to send a SASE with the order.)

Watch the case. Also, it's linked to the ARRL page list of hamfests.

Hello in Seattle from KB7RSK,

One of my other considerations is Service for the rig. I buy all Icoms and one reason is that their service outpost and headquarters is here in the Seattle Area. It's real easy to just "walk it" over to get fixed or upgraded. Sometimes they even give out simple accesories.

Since you're a ways from most manufacturers it might not be a factor but find out where you will be sending it, it MIGHT make a difference. They do break down.

Good Luck and 73

Message-ID: <57npur$13ds@usenetp1.news.prodigy.com>
Source record: 211833

SUBJECT: FT-51 PROBLEM / QUESTION - HELP!

I have a problem with my FT-51 that I cannot currently figure out --

A couple of nights ago, I left my FT-51 scanning on battery, and I fell asleep. When I woke up, the battery was dead (obviously), and when I hooked it up to some power, I had lost all of my memories. (The CPU seemed to have reset)

When I tried to enter some of my repeaters again, I noticed that the Tx range of my HT had actually been reduced to 144-146 MHz, and 430-440MHz. I have tried resetting the CPU a few times, and I have tried various features on and off (such as extended Rx), but nothing seems to work.

Can anyone out here please help me???

I would appreciate it!

73,
Bill - KF6CNP

BULLSHIT.

I operate about 5 repeaters & OFTEN find people who regularly use
my repeaters & will not help support them. Infact, I canceled the
autopatch phone line & bought cellphone service because of it.
(I saved money)

For being a Law Student & licensed ham, you sure don't know much.

The first system on the air will always have first dibs on the
frequency. That
is the way the fcc does things.

So then, SCRBBA could cease to exist tomorrow & it wouldn't make any
difference.

Remember, coordination (technically) is OPTIONAL.

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #192 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 6-Dec:
-
1. FCC Completes Processing of Gate 2 Day One Vanity Call Signs
2. ARISS Formed for Amateur Ops on International Space Station
3. Members of Radio Amateurs of/du Canada Elect Two New Directors
4. OSCAR-13 SK, Heralds Birth of Phase III-D in Final Breaths
5. Special Event Station Calendar
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. South Carolina Kit Manufacturer Calls It Quits
8. Famous Call Sign of Collins Founder Returns to the Air
9. Marconi Club in Massachusetts Gets W1AA
10. Intel Urged to Slow Development of Faster Processor Chips
11. Weekly Propagation Forecast
12. KW9KW Takes Over Editorship of "National Contest Journal"
13. New Address for W9 Incoming QSL Bureau
14. "The RAIN Dial-up" from Chicago
15. Army MARS Encourages Holiday Traffic, Increases Group Limit
-
Funding for the program's transmission and production expense was
provided this week by a grant from the AREC Repeater Group of West
Palm Beach, Florida, where "This Week in Amateur Radio" is heard on
the KF4ATQ repeater, on 146.67 MHz, serving West Palm Beach,
Ft. Lauderdale, Lake Worth, Lighthouse Point, and Delray Beach.
Presentation of "The RAIN Dial-up" was been made possible by a grant
from Dan Swee, N0FKM, of Columbia Heights, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
```

kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

1973. Circuit Simulator

Message-ID: <329FC235.5258@swbell.net>
Source record: 211845

I hope that this is not too far afield from topic but I would like some opinions from the group.

I am going to invest in a circuit simulation program/tool. I would like to hear from those of you who have used such programs with recommendations, warnings, advice, etc.

I have found two programs that seem very much alike in their features and capabilities: Electronic Workbench - Version 5.0 and CircuitMaker - Version 4.0. Any input on the relative merits of these two programs would be helpful.

I am aware that there are much more capable programs at the multi-$$$ level but I beleive that the capabilities of these $299 programs is adequate for my present purpose.

All input will be welcomed and appreciated.

>"private" users or just "paper" users.

Just as some people claim that a "closed repeater" is de-facto ownership of two repeater pairs, claiming that all repeaters should be open is de-facto stating that you want something for nothing.

Let's look at the alternatives. Are you willing to say that repeater owners should be able to charge to offset the cost of establishment and upkeep of the repeater?

If so, then what do you do about people who do not pay? Should they get the same level of authority to access the repeater than people who do help in the repeater's upkeep?

Should the repeater owner be able to limit access for people who do not pay?

If so, how does that differ from a "closed" repeater? If you are willing to accept this line of reasoning, then you must acknowledge that your definition of "open" repeaters is no longer valid.

If you are willing to state that operating a repeater is not a god-given right, then you must, by definition, not object to a members-only repeater. Furthermore, by their very definition, a members-only repeater >excludes< a portion of the amateur radio population that are not members.

Currently, I serve as Vice-President in Rhode Island's oldest radio club. Our membership is limited to 50 members. Why? For liability reasons, our club's clubhouse (which is a building on deeded property the club owns) can realistically only support that many people.

So, assuming that the club's repeater was closed (which it isn't), then membership would be limited to 50 members. You already stated that operating a repeater is not a god-given right. Thus, how would our club restricting repeater access to members-only be any different than another "private" repeater?

If you are willing to accept one, why are you unwilling to accept the other?

>I think the they should take a better look at the so called newbies.
>they now represent the majority of users and are probably the only
>reason this hobby has grown in numbers the way it has.

I don't know where you get your numbers, but "newbies" (those
licensed within the past 5 years) only account for roughly 25%
of the currently-licensed hams. That is hardly a "majority of users",
as you claim.

1977. Jumper Descriptions for FT530 rev 5-14-93

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-29 00:00:00 UTC
From: bad@wireless.wdc.net
Message-ID: <57nss8$jhr@n1.wdc.net>
Source record: 211849

Hi:

I have in my hands a badly modified US Version of the FT530 with PCB revision 5-14-93.

It currently has jumpers 11 and 13 and 16 removed and I am trying to learn what
jumpers 12-16 do.
I know that:
removing 12 enables tone burst,
removing 13 enables wide band RX/TX,
but if 15 is removed, than TX is restricted to ham bands.

But, what do 11,13, and 16 do?

Currently this radio is somewhere in between, being wideband RX/TX on VHF, but 430-450 MHz.
RX/TX only on UHF.

The end product that I want is tx in ham bands only, wide band RX on VHF/UHF
(including aircraft band), and RX only in the 900 MHz. ham band. I understand
I may not get all of my "features", but I want to learn about what's possible.

Thanks for your insight.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.packet

Hello! I have a VHF model GE Master II that I am currently using for 1200 baud packet. I am interested in using it with my KPC-9612, and using both the 1200 and 9600 on the same radio. Does someone have a mod to make it so that the 9600 will work on the same radio as the 1200? Or does someone at least have a mod that will make the 9600 work? Right now it is not deviating good enough, although it seems to receive ok.

Please CC any replies to my email address, kb0kqa@computerpro.com

Thanks and 73 - Matt

1979. Why haven't I joined the ARRL?

Newsgroup: rec.radio.amateur.misc

From: ebear@laplaza.org
Message-ID: <19961129231926493677@[10.0.2.15]>
Source record: 211851

>Less than 1/3 of all ham radio operators are members of the ARRL.
etc. etc.

I haven't joined the ARRL and won't until they play fair. They have
a private rule that allows them to pay operators, written in phony
general terms, and they just happen to be the only outfit that can
qualify. Any other organization is caught in a squeeze play ...
they can't have paid operators and they can't have operators without
paying them. Case in point: I worked for Wayne Green some years ago
and his employees could not use Wayne's personal ham station -- since
their jobs had to do with ham radio, one branch of the government said
that they had to be paid for their time if they operated his rig; the
FCC rules said thay could not be paid. It's horseshit, pardon my
french, and it's dishonesty on the part of both the ARRL and the FCC
for such a rule to exist.

So there. That's my reason.

Consider this, Greg: When you drive your privately-owned vehicle
on publicly-owned roads, no one can use that portion of the pavement
you're driving on. When you park your POV on a publicly-owned street,
no one else can park their vehicle in that same spot. You're certainly
not claiming ownership of a portion of the road but that's pretty much
what it amounts to. It's something that we all accept.

>I dunno. Maybe it's generational. Most of the gents who elmered

Well Greg, as a young pup novice I learned what to do and what not to do on the air by listening, listening, listening. And listening some more. That three-month wait for the license to arrive in the mail was surely one of the foremost reasons better behaved hams were on the air decades ago. My Heath HR-10 receiver was on nightly while the solder flowed and a table full of components slowly became a transmitter. And even after the xmtr was finished, I still listened. The fellows on the air *were* my Elmers.

But then again, I spent my novice days on HF CW, and I certainly had very good role models to follow, for the most gentlemenly operators are still found in the CW segments of the bands. That's not to say that the folks on 2m weren't good ops, but even back then there was a bit of silliness amongst many of them (on the single Southern Cal. repeater, K6MYK, an AM machine).

Maybe today's HTs should contain a three-month timer, activited by the salesperson upon purchase, to prevent transmissions for that period of time in order to force the young pups to listen, listen, and listen some more.

Maybe you haven't specifically said it, but others have claimed
that existing, coordinated private/closed repeaters should be
decoordinated in favor of other "open" repeaters.

So the rallying cry "all repeaters must be open" is quite
appropriate.

>Let me help you: the premise at hand is that, on crowded bands (i.e.,
>those where an unassigned pair is not available), open repeaters take
>precedence over (even pre-existing) closed machines. That is all.

And what about machines that were coordinated as private/closed
machines 10 or 15 years ago before the bands "were crowded"?

>Ah, but they also have given appropriately representative bodies
>of amateurs the ability to say 'no' to it.

They have? Please provide one shred of evidence to support this
assertion. The FCC does not recognize frequency coordinators. They
do not assign powers or privileges to frequency coordinators in
Part 97.

>You know, we hear a lot about the 'rights' of repeater owners,

No, what you hear about are the privileges accorded to repeater
owners by the FCC.

That must really make your blood pressure go up, eh?

>they forget that they are mere squatters, who remain at the pleasure
>of the public.

Actually, at the pleasure of the FCC, but that's another story.

I'm glad we're in agreement.

"Its pretty obvious that Netcom lets any old moron with a modem use their
service" is not an ad hominem attack.

"Its pretty obvious that Greg is a complete waste of good oxygen" is
an ad-hominem attack.

I think I've got it now.

>All this assumes that Part 97 can't change. It can and does. It
>will in the future.

You didn't say "might change". You said that closed repeaters "are"
privileged. Clearly, your understanding of Part 97 and how it relates
to repeater operation in general is poor.

>>Your privileges to use a repeater are solely at the discretion of
>>the repeater trustee. 97.205(e). At any point in time a trustee
>>can tell you to scram, if for no other reason than he/she doesn't
>>like your voice, and is sick of listening to it.

>of your infamous 'letters' to everyone who comes on your machine
>with an African-American accent, you'd expect to be protected by
>the Federal Courts, and hang on to your repeater?

Tell me, what exactly is an "African-American" accent? Are all
"African-Americans" born with this accent? Since accents are
generally regional in nature, must we thus conclude that only
certain people born in a particular geographical area are "real"
'African-Americans'?

Sounds to me like you're starting to project your own inherent
prejudices/racial views on other people.

Or, are you a member of a protected class that feels that
closed repeaters are yet another "great white conspiracy" to
keep you down?

You do get something. You get the intense, personal satisfaction of
knowing that your contribution has gone to help offset the operational
costs of the machine.

It seems so many people have forgotten what it means to be a philantropist
today....

>Okay. So what's the source, then, of the bickering? Could it be
>that there are some folks who just like to bicker? Nah...

I wasn't the one who brought up the closed repeater topic.

>Well, as long as everybody follows the letter of Part 97, the world
>will be rosy. Right?

I certainly try to. I would hope that you would too.

>>Such is life in a section of the country where a significant portion
>>of the population is lucky to have completed high-school.
>
>Nope; no 'us and them' here at all.

Nope, just a statement of fact. The capital city in the state had a
dropout rate of over 60% the last I knew.

>So, shut down the machine.

Why inconvenience the dozens of users that do use the machine correctly?
Fold up and go home because a couple of people ruin it for dozens of
others?

No, I don't think so.

>Or, if there are plenty of pairs, close it, sending back the dues of those
>who don't qualify. There, I've said it (with a caveat).

And what is to stop the miscreants from merely migrating to the new
frequency?

>Or, if you don't like the machine, abandon it (and the expense) to the
>rabble.
>

>If it makes you that miserable to run the machine DON'T DO IT!

I prefer to exercise my privileges under 97.205(e) to chase the
riff-raff off.

>Are you willing to submit your criteria for 'gets a letter' to public
>scrutiny?

Sure, why not? To date, one letter has been sent. To a known (i.e.
I've personally caught red handed) repeater jammer/hacker. There is
only one other person who might conceivably get a letter, but he
knows better than to come on frequency.

>>That's awfully big of you. You should apply for Godship status with
>>Zeus Carl, King of The No-Code HF License.
>
>I take it you see no-coders as a threat. As you apparently do
>anyone who would tell you 'no' with regard to your use of
>public spectrum (or for that matter, anyone who is able to
>tell you 'no.').

Do you deny that Carl is the King of the No-Code HF license?
Or, are you objecting to his status as a deity? Around here,
no-coders are not the threat, its the "Instant Extras" who
ground their stations to the natural-gas pipes in the houses.

>I'd suggest that on a machine which is 'open' and which is so
>great, there ought to be a lot of activity. Unless there is some
>third factor which causes people not to want to be there.

Yeah, more like out of the 3,000 amateurs in the state maybe 100
have dual-band radios.

>But the point is moot, because it sounds like there are plenty
>of open pairs on the band. So a hard scrutiny isn't required.

The last time I knew there were no more 440 coordinations being
accepted for the area.

>I'm a little concerned about the site, though. Perhaps it might
>be better used by an individual or group with a bit more diplomacy,
>who might be able to recruit more effective volunteers.

Nah, because another individual or group wouldn't get the site,
period.

Still looking for help on how to program this little HT. I can put
a freq in and set the normal +/- 600 or simplex mode, but dont know
how to change the step from 10khz to 5khz nor how to set an oddball
split like some of the MARS repeaters use. It also has on the TT pad
keys "A" "B" "C" and "D". How do you use them????.
Email reply wud be appreciated. Rig works fine but it was a donated
item at a MARS picnic and I won it in a drawing (no manual nor book)
with it.

>don't give a damn about the law and are only interested in lining
>their own pockets. Don't they know they's supposed to police the
>world too????

As an additional note, there is NO license required to purchase
and/or own any type of amateur transmitting equipment. The Radio
Shack disclaimer is, correctly, simply a note that a license is
required to OPERATE the unit. NO license is required to
purchase it, so RS has no legal or ethical requirement to
check anyone for a license before selling the unit.

>those areas of the world that currently use battery power to run their
>radio equipment, and buying them radios to replace the homebrew rigs
>which are all they can afford - rigs that are CW-only.

>Or do we stop speaking to them?

The arrogance of this statement is amazing. It presumes much
of the rest of the world is unable to field amateur stations of
any consequences, but, for (apparently) poverty reasons, they
can only put together "homebrew rigs which are all they can
afford - rigs that are CW only." What economic and uninformed
garbage.

One interesting thought, even if that was the case, it would
bolster the continued use of CW and it would lead to ham
newcomers learning CW because they WANTED to, not because
they had to.

Lastly, it is clear, at least to me, that once again we find that
the opinion of another pro-code advocate is based not
on the lelimination of CW testing, but rather the incorrect
assumption that ending CW testing is synonomous with
ending ALL use of CW.

>And where do we get all the power to run RTTY/TOR/SSB in a long-term
>emergency? If all you got is 12 volts, and no probability of AC for the
>forseeable future, you might just wish you knew a little outmoded CW.

You get the power from 12 volt batties as found in any
automobile, truck, etc. You charge that battery by any
motor vehicle. Power availability is NOT even an issue.
Additionally, the receive power consumption of SSB is no different
than that of CW, so what the issue. It is only the need
to power a separate coputer for RTTY or Packet where
additional off-the-air power consumption may be involved.
Even in that mode, the station doesn't take tremendous

power needs.

Source record: 211574

>>Are we witnessing the "twilight of amatuer radio" ? Is amatuer radio slowly
>>dieing from its "bloated" buracrecy, poor operators, and choking on it's a
>>own excesses ?

I think we're in the dual slump of the end of Oscar 13, and poor sunspots.
I don't see where the 'bloated ham radio' bureacracy is? Why would that
affect the hobby, anyway?

I do think there's a large number of people who drink a whole lot of alcohol
or smoke mariajuana and blab on the ham radio. I think the rudeness, the
whining and rules lawyering are really part of a larger picture of the
decline of civility in America more than a decline with ham radio itself.
Welcome to the 90's -- it's not just ham radio that sucks nowadays.

(That's one useful thing about
operating CW is that those with high degree of brain damage can only
pull off voice.)

I wonder if the internet is sucking off a lot of the people who would otherwise
be involved with ham radio. I think the issue for the future really, is
what kind of fun thing can ham radio provide that you can't do, say, on
the internet. The kind of thing I'm thinking of is the Shuttle ham radio
stuff, or the guys doing the ham radio GPS. Maybe fast scan TV.

2000. CW ratios high on DXpeditions

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-30 00:00:00 UTC
From: jherman@Hawaii.Edu
Message-ID: <57qfj6$8h7@news.Hawaii.Edu>
Source record: 211575
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The following is a summary of QSO totals from the XZ1N DXpedition
to Burma/Myanmar. Note the ratio of CW to Total QSOs. Unusual?
Not at all. *Every* DXpedition returns with such a high CW ratio.
That CW continues to be the common mode amongst the world's HF
hams is reason enough for the US code tests to be kept.
Jeff KH2PZ

From: Warren Hill <kf7ay@getnet.com>
The XZ1N team returned on November 27th and a detailed analysis of the logs
in now underway. Below is a "first pass" look at the combined .bin files of
the four operating positions.

Band CW SSB RTTY TOTALS

160 1,222 0 0 1,222
80 2,377 559 7 2,943
40 3,876 401 11 4,288
30 2,113 0 0 2,113
20 1,661 3,426 304 5,391
17 443 699 0 1,142
15 897 4,531 317 5,745
12 19 103 0 122
10 4 217 0 221

TOTALS 12,612 9,936 639 23,187

As promised, this operation did its best to concentrate on North America
and made a special effort on the low bands. Overall we are pleased with
these totals considering that this is still the bottom of the current
sunspot cycle and Myanmar is a very long haul from North America. The
majority of contacts were with European (47%) and Japanese (32%) stations,
with North American (15%) stations being worked only during the brief
windows available to us. Below is a brief summary of the operators and
antennas for each band.

<remainder appears on the DX groups>

We know how many licensed hams there are in the US, but please tell
us how many of those licensees are operators. I know of too many who
are licensed but do not operate at all, so your claim is invalid.

Let's suppose that half of those licensed are actual operators. Now
you can say that 2/3 of all current operators are ARRL members.

In the future do show more care in how you write your poll questions.

> Privilege is something granted by arbitrary temporal authority.

Yes, Gary, I assume that making up definitions instead of abiding by
the generally accepted ones found in good dictionaries is more fun
and must be very liberating. I infer that you have decided that all
rights are inherent and so you must find the term `inherent right' to
be a tautology.

My dictionary shows a privilege to be a beneficial advantage and a
right to be a privilege protected by law. To the extent that our
licenses, by virtue of of the legislation under which they were
issued, have the force and protection of law, I see all license
privileges as being rights. They may not be inherent ones,
certainly, but rights they are none the less.

The first Ten Ammendments to the Constitution awarded certain Rights
to certain citizens. It did not discover existing inherent rights
ones but it created new ones with the force of law. Do you argue
that the Bill of Rights should be renamed the Bill of Privileges?

>
>My understanding of the original thrust behind 97.205(g) was packet radio,
>and station operators being responsible for retransmission of packet
>messages that violate amateur regulations.

Your understanding is incorrect (as usual). 97.219 deals with packet relay, and puts the burden on *both* the originating station and the first store and forward relay station for message content. Packet digipeaters aren't repeaters under the FCC definition since they store and verify a complete packet before forwarding it on via a modified and readdressed packet.

97.205(g) was put in place specifically to provide voice repeater trustee relief in the event of retransmission of unsavory activities or language from jammers or other miscreants. It relieves the trustee of the necessity of constantly being poised with his finger on the off switch during normal repeater operation. This is the sole exception to the general rule that a station licensee is always responsible for the content of his transmissions.

Just pull a copy of Spice down from the net and use that. It is probably
the best simulator available for analog circuits, and you can't beat the
price. All the component manufacturers supply Spice models for their
components. It is a great tool.

There are companies who fit nice GUI front and back ends to Spice,
and their products are very nice, but they aren't free. MicroSim has a
demonstration version of their DesignLab that you can download from
their site. It allows schematic input, simulated oscilloscope display
output, *and* does PC board layout, creates Gerber files, etc. The demo
isn't so crippled that you can't do productive work with it, so it's worth
a look. The uncrippled version is pretty dear, however, so you might want
someone else's full package if you're going to be doing large projects.
I'd buy the full package in an instant if I could justify the cost.
($13,500 ouch!)

In keeping with the serious tenor of this thread, I offer the
following-

For sail: U.S. flagues. 51 Stars to commerate the inclusion of
Puerto Rico with a blank space in case he decides to inklude Guam.

$2.00 per star. Send your checks to P.O.Box 1776, Prague , Check
Republic

>Specifically said? No, of course not. (Too politically unpopular).
>However, that is the unspoken implication.

Ah, so you're arguing against what people *aren't* saying. Okay. Well, I guess it's easier. Sort of like playing chess against yourself. But then again, it's rather useless, like calling 'CQ' on 15m at local midnight in the sunspot doldrums.

In rhetoric, as in ham radio, your mother was right: 'it is better to play with your friends than to play with yourself.'

>"All repeaters must be open." That is the claim.

Nope. Sorry. Start again. That is not the claim. You can continue to argue against it, but it is mere smoke. For it is not the claim.

Let me help you: the premise at hand is that, on crowded bands (i.e., those where an unassigned pair is not available), open repeaters take precedence over (even pre-existing) closed machines. That is all.

Isn't *that* bad enough? There are some very compelling arguments against even *that* step. Therefore I submit that it isn't necessary for you to make up an alternate position against which to argue. Unless of course you simply like to argue, and find agreement distressing.

>To wit, I ask: Why?

Why what is suggested, or why what you falsely claim is suggested. I choose to ignore the latter and stick with the former.

>The answer is usually something like the "public good" or some form
>of communistic answer, usually, like "the needs of the many outweigh
>the needs of the few".

Oh, Michael. Red-Baiting went out with the 50's. And the quote is from Mr. Spock, not from Lennon and McCartney (or is than Lenin and McCarthey?) in any case.

And 'public good' is a fine tradition. You know, that old doggeral about 'promote the general welfare?' Real commies them guys that

wrote that. Long-hair pinko freaks. Wore wigs, even. Mighta been
queer :-)

On top of that, the goverments of the world, quite wisely, defined
the radio spectrum as a form of common public property. They did
this at the outset of the development of technology. They established
that the 'public good' is a prime principle to be considered in its
use by particular interests. That principle has served fairly well
ever since.

No, MD, you're welcome to your private machine. On 2M, if there are
plenty of empty pairs in your area. On 70cm if same. If not, well,
prepare to reach for the same level of technology commercial users
reached years ago...

>>No, the substance of the argument is that, in crowded bands, no

Ah, but they also have given appropriately representative bodies
of amateurs the ability to say 'no' to it.

>>And that those who want to form a
>>private clique, with the ability to 'blackball' 'those people' from

No, I just don't care for people who erect private clubs on scarce public
property, then claim that, by virtue of their having built a club-house,
they now own the land underneath.

You know, we hear a lot about the 'rights' of repeater owners, but
they forget that they are mere squatters, who remain at the pleasure
of the public.

Sounds to me like a case for sending the jerk his $25.00 back. You see, in the course of human endeavor, most people pretty much understand that they get something for sending in a check.

>>Looks like more was needed (i.e., another machine).

So, shut down the machine.

Or, if there are plenty of pairs, close it, sending back the dues of those who don't qualify. There, I've said it (with a caveat).

Or, if you don't like the machine, abandon it (and the expense) to the rabble.

If it makes you that miserable to run the machine DON'T DO IT!

>Nah, see, I've been coordinated as an "open" machine for almost as long

I take it you see no-coders as a threat. As you apparently do
anyone who would tell you 'no' with regard to your use of
public spectrum (or for that matter, anyone who is able to
tell you 'no.'). Could it be that you are uncertain of your
own credibility as a leader?

>Utility to the amateur community is a strange thing to measure.

>will be purring along nice and quiet-like with full power. I'll
>be really popular then, since there are only four or five other
>repeaters in the area that can make a similar claim to fame.

I'd suggest that on a machine which is 'open' and which is so
great, there ought to be a lot of activity. Unless there is some
third factor which causes people not to want to be there.

But the point is moot, because it sounds like there are plenty
of open pairs on the band. So a hard scrutiny isn't required.

I'm a little concerned about the site, though. Perhaps it might
be better used by an individual or group with a bit more diplomacy,
who might be able to recruit more effective volunteers.

>
>An "ad hominem" attack is a personal insult. "Lots of new hams" and
>"some people", the last I knew, didn't qualify as a person.

No, Michael. 'Ad hominem' refers to a rhetorical fallacy which equates the quality of the argument with the identity of the person making it. That's all it refers to.

A 'personal insult' is something like 'Michael Deignan is an ignoramus.'

An *ad hominem* statement is 'since Michael Deignan is an ignoramus, his position on closed repeaters should be given no serious consideration.'

Both may be wrong, but only the latter is *ad hominem*.

'Ad hominem' is the conclusion that 'no-coders' and 'newbies' cannot, *a priori* have a valid point by virtue of their being either or both of those two.

I am unwilling to accept the latter. On the face of it, 'no-coders' and 'newbies' bring a fresh outlook that we 'old farts' often overlook. I think that we should first meet them, then make them feel welcome, and then both talk and listen to them.

SB PROP @ ARL $ARLP050
ARLP050 Propagation de KT7H

ZCZC AP70
QST de W1AW
Propagation Forecast Bulletin 50 ARLP050
From Tad Cook, KT7H
Seattle, WA November 30, 1996
To all radio amateurs

SB PROP ARL ARLP050
ARLP050 Propagation de KT7H

What an exciting week for propagation. Solar activity took an unexpected leap over the past week, rising to levels not observed in over two years. We have not seen solar flux at 100 since September 3, 1994 and when it reached 104.4 on November 25, the solar flux had not been that high since February 24, 1994.

It is uncertain what this activity has to do with ushering in cycle 23, since the sunspots producing these numbers were around the Sun's equator, and new cycle regions are associated with higher latitudes.

The average flux was up more than 20 points above the previous week, while sunspot numbers were up over 35 points and the A index was down over 4 points.

The current forecast is for flux values to go below 90 around December 5, a minimum of 72 from December 7 through 16, and above 90 again after December 21. This is based on the previous solar rotation, so really anything could happen. This is merely a forecast that tries to predict what will happen when the solar regions that caused the current activity rotate into view again.

We had several comments via email during the past week. Don Stoner, W6TNS commented that current conditions don't reflect what his logbook shows for 1994. This is probably because we haven't had a sustained period of higher solar activity.

Several people, including W7LKR said that conditions on 80 meters were quite odd, with absorption up normal communications to regional stations difficult.

Readers who wish to contact the author of this bulletin can reach me via email at tad@ssc.com. For packet radio users the address is KT7H @ N7DUO.#WWA.WA.USA.NOAM.

The flux numbers given in this weekly bulletin are always the noon measurements from the Penticton, BC observatory, but there are actually three per day. Below is a table of each flux value for every day since the last bulletin:

11/21/96 1800 UTC: 74.2
11/21/96 2000 UTC: 74.4
11/21/96 2200 UTC: 75.5

11/22/96 1800 UTC: 79.5
11/22/96 2000 UTC: 82.6
11/22/96 2200 UTC: 82.3

11/23/96 2200 UTC: 95.0
11/23/96 2000 UTC: 91.0
11/23/96 1800 UTC: 90.6

11/24/96 1800 UTC: 103.5
11/24/96 2000 UTC: 99.8
11/24/96 2200 UTC: 104.2

11/25/96 1800 UTC: 103.6
11/25/96 2000 UTC: 104.4
11/25/96 2200 UTC: 102.1

11/26/96 1800 UTC: 104.0
11/26/96 2000 UTC: 103.6
11/26/96 2200 UTC: 106.1

11/27/96 1800 UTC: 99.6
11/27/96 2000 UTC: 102.7
11/27/96 2200 UTC: 100.7

11/28/96 1800 UTC: 96.1
11/28/96 2000 UTC: 98.1
11/28/96 2200 UTC: 97.5

Thanks to Cary Oler for the above data. Cary has a very interesting and informative web page with solar data and current solar images at http://holly.cc.uleth.ca/solar/index.html

Sunspot Numbers for November 21 through 27 were 26, 27, 73, 54, 89, 85 and 63, with a mean of 59.6. 10.7 cm flux was 74.4, 82.6, 91, 99.8, 104.4, 103.6 and 102.7, with a mean of 94.1. Planetary A indices for the same period were 5, 3, 3, 8, 4, 4, and 8, with a mean of 5.

2016. Yaesu HT FT23R info

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-30 00:00:00 UTC
From: Joesph Fenn <jfenn@spartacus.hula.net>
Message-ID: <Pine.OSF.3.95.961130120911.27160A-200000@spartacus.hula.net>
Source record: 211625

Does anybody out there have a manual or info on how to program the small
little Yaesu FT23R 2 meter transceiver??? I've fumbled around with it
trying to set the step from 10 khz to 5 khz and finally got it to
increment at 5khz steps. Then I fooled around some more trying to set
up an oddball split of 141250(up)/143450(down). I figured out how to
do the normal simplex/600 up/600 down rptr shifts but not the odd wide
splits. Also dont know how to use the memory channels. As best as
I can tell, the TT pad on front of battery case has its full quote of
nrs plus * and # keys, but also has on right side of tt pad vertically
the letter keys A B C D so am just assumming some how those are for
storing 4 of your favorite freqs but just cant figure out how its
done. Where could I purchase a manual, or Xeroxed copies of the
manual as this is a neat little unite (already modified for MARS) out
of band use etc. I think it covers from 140.000 up to 157.000 more
or less. It must be a model from long ago though. Can anyone help or
steer me to someonw who can. I just spend an hour on Yahoo searching
for a company in US to go to with the problem, but was wasted time,
as the searches found many sites but when trying to access them, they
all ended in error "unable to connect alert" et al.
Appreciate email if can lend a hand.

Just a real neat hobby which seems to be moving towards 'Old Boys'
clubs and 'Members Only' club-houses on erected on public property,
until all the public property is gone.

1. How have you asked?
2. What do you know of the circumstance?
3. What is the proportion of their use?
4. Where else in the hobby (and outside) are their
funds committed?
5. Are you running a machine on a band which has no unused
pairs in your region?
6. Have they overtly argued that they are not responsible to
help?

> Infact, I canceled the
>autopatch phone line & bought cellphone service because of it.
>(I saved money)

As well you should have. Use of appropriate common-carrier technology
is usually more cost-effective and flexible than jury-rigs like
autopatches (nothing against them, but compared to cell-phones,
they're kludgey).

The FCC hasn't required actual station location on the 610 for many years.
All that's required is a current mailing address.

Do you mean to tell us, Michael, that if you started to send one of your infamous 'letters' to everyone who comes on your machine with an African-American accent, you'd expect to be protected by the Federal Courts, and hang on to your repeater?

On the basis that 'only the FCC' can regulate your actions?

>isn't a step to be taken lightly.

Absolutely. It is a step of last resort (then again, a full band is 'last resort'). 'Prior' resort is to start 'opening' machines which are 'closed.'

> One could just as easily ask
>that those wanting open repeaters go and establish them on 222 MHz,
>902 MHz or 1.2 GHz instead of attempting to evict currently existing
>repeaters from the channels that they have long occupied.

The problem there is one of accessibility in the form of commonly-available and inexpensive commercial gear. I tend to believe, that the 'easy' bands ought to be available to the maximum number of users. When they fill up with closed machines, they are not.

>As you say, we need to use the bands or risk losing them, but
>you've given no compelling reason why it must be those with long
>tenure on 2m and 70cm who must bear the burden of doing so.

Tenure is secondary to access in this case. It is with broadcasters, as well, BTW.

For a real hamfest, be in Manassas, Virginia, the first Sunday in June.
Prince William County Fairgrounds, on Highway 234, south of Manassas.
Hamfest is put on by the Ole Virginia Hams Amateur RAdio Club; OVH has
had this hamfest for almost 25 years and it is great. Run by hams for
hams. $5.00 admission, $5.00 more for tailgate space. Ten acres of
tailgating plus two big buildings full of commercial exhbitors. Lots of
computer stuff plus EEB and HRO along with lots of other amateur radio
dealers.

For more info, write:

Ole Virginia Hams ARC
ATTN: Hamfest
PO Box 1255
Manassas, VA 20110

gary@ke4zv.atl.ga.us (Gary Coffman) shared these priceless pearls of
wisdom:

->Just pull a copy of Spice down from the net and use that. It is probably
->the best simulator available for analog circuits, and you can't beat the
->price. All the component manufacturers supply Spice models for their
->components. It is a great tool.

Gary --

I found a demo routine that claims to provide spice models. The trouble
with the damn thing for RF is that there has to be a resistive path to
ground from every node. Trying to do a simple tapped-capacitor filter has
totally glommed the thing up with 100 Megohm resistors from every port just
to dummy up that which doesn't exist.

Do you know if this is a fundamental limitation of Spice or this particular
programmer's implementation of it.

In feet: do as suggested, ie long enough to go from the radio to the antenna (connection), then measure it.

then you will know how long you should use. :-)

enjoy!

I remember from the late 1970's and earily 1980's a receiver mod for the Kenwood TS520 and R599 receivers (W6TOG?). It replaced the FETs in the preamp, mixer and first LO with MOSFET to lower the front-end receiver noise. Does anyone remember this mod and have a copy of what was needed to be done? Many Thanks and 73's in advance. D.Pat Breeden WB3KUM/9

Hey Guys,

Why is this thread propigated to 29 different news groups? That is a horrible waste of spectrum.

Please Please dump all of the news groups from your replies except one. alt.ham-radio.digital-voice seems like the right place to me.

Please let this message be the last one to all 29 news groups.

Anthony R. Gold <tgold@panix.com> wrote:

>My dictionary shows a privilege to be a beneficial advantage and a
>right to be a privilege protected by law.

I don't know if I agree with that definition. First off, all people
have certain inalienable rights. These are rights that you are
born with, and cannot be taken away from you.

Governments cannot grant you rights. They can merely grant you
privileges. Governments do not have rights. They are granted
privileges by the populace that forms the government.

I suspect that you have a dictionary written by a liberal who is
attempting to redefine the meanings behind privileges and rights.

>To the extent that our
>licenses, by virtue of of the legislation under which they were
>issued, have the force and protection of law, I see all license
>privileges as being rights. They may not be inherent ones,
>certainly, but rights they are none the less.

Completely, demonstrably false. You have the right of "Freedom of
Speech". Does this right automatically give you the right to set
up an FM radio station on the broadcast band, or set up an amateur
station without a license? Of course not.

Other people have tried that "Freedom of speech" bit when it comes
to operating illegally and the courts have unanimously (to the
best of my knowledge, don't have Lexus handy at the moment) ruled
that no "right" exists in this regard.

Your freedom of speech does not mean you have a right to a free pulpit,
nor does it mean that other people have to listen to you.

>The first Ten Ammendments to the Constitution awarded certain Rights
>to certain citizens. It did not discover existing inherent rights
>ones but it created new ones with the force of law.

I disagree with this characterization. The Bill of Rights enumerated
rights that the Founding Fathers wanted to make clear the government
could not separate from the citizenry. In this sense, they did not
"create" new rights via law, they were rights that already existed
and were codified for protection by government usurption.

Good thing too, considering that Japan refers to their "CB radio"
license as an "amateur radio" license.

I wonder how thick the US callbook would be if we had to list every
single CB-Radio operator?

I have heard, and I stress HEARD, that the 45-dollar gizmo is not that great.

I have had contact with somebody using the 84-dollar competitor, and he sounded wonderful.

Do I have make/model/part numbers? No, sorry. I didn't know there'd be a quiz. :-)

Seriously, there are only a couple models out there, and the one that's 85-bucks at most ham radio places sounded really good to my ear. Wish I could be more help.

2046. Morse Practice Program?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-30 00:00:00 UTC
From: windbrkr@fred.net
Message-ID: <MPG.d0abb668b9afd939896a9@news.fred.net>
Source record: 211655

Dear all,

I've tried several of the Morse training programs that run under DOS and Windows, but have not yet found one that will support receiving what I send from a hand key. All seem to be geared toward sending Morse to be copied, in preparation for a code test.

What I'm looking for is a program that will take input from a straight hand key, via a serial or parallel port, sound the dit and dah tones on the PC speaker or sound card, interpret what's sent, and display it on the screen as alpha-numeric characters. Nice to have things would be the ability to display "test" messages on the screen, then receive those messages as I send them, and score me or otherwise give feedback on speed and accuracy of my sending.

Does anyone know of a program that does all or part of this? The objective, of course is to develop speed and accuracy in sending as well as receiving...

Tnx & 73, Bob K9CMR

Alinco has a poor policy that you have to order replacement microphones from the Dealer even though the Alinco DR-570T has been out of production for 5 years. I first called HRO in Salem. The salesman told me he does not have access to the part # of the Mic because it is not in his database.(LAZY). AES in milwaukee took my order including my credit card over 3 weeks ago. I called today to check on it. No record of my order ever being placed!!!! The manager says I now must send in the money first(no credit card allowed) to order the microphone! Why wasn't I told that the first time! NEEDLES to say I CANNOT reccoment ALINCO,HAM RADIO OUTLET IN SALEM,NH OR amatuer electronic supply in MILWAUKEE!!!

ILLEGAL INTERNET CENSORSHIP/BAN: AN AUSTRALIAN FIRST (SEE BELOW).
SMUGGLING BOOK BACK ON MARKET - CALL FOR ROYAL COMMISSION.

On Wednesday, 20th November 1996, Vacik Distributors and Vic Bates served a summons on Author Raymond Hoser alleging he had made false and defamatory statements against them and the NSW National Parks and Wildlife Service (NPWS) in his recently released book "Smuggled-2: Wildlife Trafficking, Crime and Corruption in Australia". The book details the involvement of senior wildlife officials in New South Wales (NPWS) and other states in the illegal trade in Australia's wildlife, as well as other criminal activities such as the drug trade, arms dealings, and so on. The book further documents NPWS involvement in murders, bashings and other means to silence whistleblowers, including those within their own departments. Phone tapping, burglaries, armed raids and other strong-arm tactics are so common as to be effectively routine.

On Friday 22nd November at the Supreme Court of New South Wales, Justice Levine rejected the application by the NPWS side. Their lawyers had sought an immediate court order banning any further sales, distribution and advertising of the book, including via the internet, payment of punitive compensation to the NPWS side by Hoser (damages) and a media blackout/ban on any reporting of the case and the bans sought. Levine rejected the application by the NPWS side and further awarded all costs to be paid by the NPWS side, including for the lawyers used by Hoser in his defence.

In his Judgement, Levine failed to identify a single false or defamatory statement in the book "Smuggled-2" or it's predecessor, "Smuggled - The Underground Trade in Australia's Wildlife", which also carried similar serious allegations against Vacik and NPWS and were also a part of this court case. Levine allowed sales of the book to proceed and ruled against any further attempts to ban the books or their promotion. In his verbal and written judgements he specifically referred to the internet (initially raised by the NPWS side) allowing promotion of "Smuggled-2" to continue. The decision was made at 10.30 AM.

Since Friday's failed attempt to ban the controversial book "Smuggled-2 Wildlife Trafficking Crime and Corruption in Australia", Kotabi Publishing has been inundated with orders for thousands of copies of the book as well as it's predecessor, "Smuggled", first published in 1993.

Hoser described the above case as "a victory for free speech and those who wish to expose crime and corruption in government".

Kotabi Publishing did in the following week announce that a further 2,000 copies will be released to Sydney's bookshops within a week in order to satisfy the massive public demand for the book. Reprints of both "Smuggled-2" and "Smuggled" (a book that was illegally banned by NPWS for a month after publication), have also been announced, including a specific USA print run for both titles.

Following confirmation that the material highly adverse to NPWS in "Smuggled-2" is not defamatory, several recently retired employees of NPWS have joined the call for a full Royal Commission into their department. Clive Bennett who worked for NPWS for many years in the very sections named by Hoser as corrupt says "Hoser's account of corruption within NPWS is accurate. He has uncovered far more corruption in that department with his very limited financial resources, than the very expensive tax-payer funded ICAC which could not find corruption here or in the Police. Now is the time for a Royal Commission to sort out the mess in this department once and for all". Bennett himself and about a dozen other NPWS employees unsuccessfully attempted to get ICAC to investigate NPWS, even though they provided several feet of documents which they said proved corruption was a serious problem in the department. He said "I got nowhere with ICAC so instead myself and others went to Raymond Hoser with our evidence and he put it in "Smuggled-2" so that at least this way the public could find out what was really going on."

In spite of a Supreme Court ruling on Friday November 22nd, 1996 banning any censorship of "Smuggled-2", there have been a number of attempts to further ban the book "Smuggled-2" and prevent it's distribution.

ILLEGAL INTERNET BAN ENFORCED

A Victorian MP, Victor Perton shown to have lied in a previous book by Hoser ("The Hoser Files - The Fight Against Entrenched Official Corruption") has actively phoned the media, made false and defamatory statements against Hoser and used his position to direct them against publishing any material that may publicise Hoser, any of his books or the material in them. Perton, who is currently also subject to a defamation claim by Hoser was unable to sue Hoser for what he printed as Hoser was able to back what he printed with documentation from the MP himself as well as legally obtained tapes.

At about noon Friday, 22nd November, Perton illegally forced Hoser's internet provider, Starway corporation to wipe Hoser's various internet sites (the vast bulk of which are devoted to the publication of previously published scientific papers on reptiles, herpetological (reptile) societies and so on) and cut off all access to him in what is perhaps Australia's first ever case of internet censorship. It is also noteworthy that this MP, himself a qualified lawyer, appears to have committed a contempt of the Supreme Court decision made just hours earlier. Perton simply phoned the internet provider and made threats to

them, thereby intimidating them to wipe Hoser's sites and access, even though such an action was in violation of the commercial agreement between Hoser and the server. When Starway unilaterally wiped Hoser's sites and access, they did not even afford him the courtesy of telling him what was going on and it was only by accident that he found out what had happened the day after, when in Sydney after a number of people claimed they couldn't access his sites. It is also notable that Hoser could easily have been contacted by phone, fax or mobile and evidently none of these were attempted by either Perton or the server franchisee (as conceded by the server who later commented "It was all done by head office").

Perton appears to have developed somewhat obsessive behaviour against Hoser since publication of material adverse to him in a book about Police Corruption "The Hoser Files", published over a year ago. Besides defaming Hoser in calls to third parties, Perton most recently took it upon himself to harass Hoser's lawyers in Sydney by making repeated nuisance calls and abusing their staff, hardly the conduct expected by a member of parliament. Interestingly enough, Perton maintains a large website himself, which appears to be mainly devoted to self promotion.

In relation to the illegal wiping of Hoser's sites from the internet, there has been strong interest from various quarters, including others involved in the internet. Regarding the illegal activities by NPWS and their failed attempt to ban the book "Smuggled-2", Whistleblowers Australia, a Member of Parliament in NSW, Mr. Richard Jones and the Avicultural Community (AAPA) have this week put out media releases stating the need for an independent Royal Commission into the NPWS. All have been unanimous in declaring ICAC and it's head Barry O'Keefe as not being fit and proper to conduct any inquiry into the department.

In summary Hoser said "I join the call by Whistleblowers Australia, various MP's, and the various NPWS officials themselves for a full Royal Commission into the department, noting that ICAC are not competent of such inquiry. Myself and my publishers will continue to attempt to satisfy public demand and the right to know by supplying books, regardless of illegal activities and censorship by dishonest MP's and/or those who aid the dishonest, NPWS themselves and any other supporters of the corrupt."

Since the unsuccessful defamation action against Hoser, Victor Bates of Vacik has telephoned a number of former NPWS officials who provided material to Hoser for Smuggled-2 in an attempt to get them to change their evidence in the event that he later pursues a further defamation action against Hoser. Whilst Hoser objects to this overt intimidation of potential court witnesses, it will probably not assist the Bates/Vacik/NPWS cause as verbal evidence from the officials was taped in it's entirety and as such would be tendered in court if neccessary.

Hoser was able to successfully action for a defamation previously on the basis of a tape recorded interview (tape of Peter Jones used to action Gerry Swan).

We hope that it is made as widely known as possible that Victor Perton (a member of Parliament here in Australia) has been guilty of perhaps the first case of overt internet censorship and a contempt of the Supreme Court. We ask that as many messages of protest to various places be made so as to prevent a repeat of this action in future. It also appears that Perton himself can also claim credit for knobbling sections of the media here in Australia for not reporting on the series of events reported above. He has made false and defamatory statements to the ABC on a radio broadcast.

"Smuggled-2" costs $25 including postage within Australia. "Smuggled" and "The Hoser Files" both cost $20 including postage within Australia. Overseas orders add $5 to cover postage. Australian and USA currency accepted.

For the time being internet orders cannot be accepted by Raymond Hoser and/or Kotabi Publishing as both have been wiped from the internet illegally. Legal action by Kotabi against the member of Parliament and Starway, the internet server is pending.

Internet orders can be for "Smuggled-2" can be made to Steve Grenard in the USA or "The Reptilian Magazine" in the UK (their internet addresses are not given here). The other books are best ordered direct from Kotabi Publishing (which will keep printing all titles while demand continues, and for at least the next 12 months).

This hamfest has to be the best ting going outside of Dayton.

While I will continue to go to Dayton every year as I have since 1979, it has outgrown itself and just doesn't seem to be as good the last 5 years or so. I think it's gone downhill since the Bill McNabe era. Politics bring in chairmen each year but the pros who ran things seem to be tired out.

Dayton to me supplies a vaction with many friends from around the world. I can go to local hamfests to find my junk or to HRO and view the new stuff in a quiet, clean showroom.

The Baltimore guys have expanded their show into such a large display it seems bigger than Dayton in vendors. There were 5 indoor buildings and one that had a couple hundred cars tailgating INSIDE a building.

Then don't forget the FAR Foundation For Amateur Radio GAITHERSBURG hamfest in September as a real hug mostly outdoor affair. It gas expanded to cover almost the whole fair grounds.

Dayton is a gathering point. There are many really neat hamfests in the NE.

Well Burt, you are right. There IS very little "intelligent"
discussion around here lately. Most of it seems to revolve around
you. I used to really enjoy some of your posts, but you seem to be in
a VERY extended dry spell. I have tried baiting you, in the past,
into going back to the more interesting posts, but you seem to have
lost your edge. Burt, you honestly are at serious risk of becoming
the UTH (Ultimate Typical Ham). The ball is in your court!

: >You are so very right. Not one of the post has ever indicated they
: >should should be able to use a repeater as a god give right. The
: >main argument has been the fact that the freq pairs are tied up by
: >"private" users or just "paper" users.

: Just as some people claim that a "closed repeater" is de-facto
: ownership of two repeater pairs, claiming that all repeaters should
: be open is de-facto stating that you want something for nothing.

My feeling is that a certain percentage of the frequency pairs should be set aside for closed repeaters - with the same true for private repeaters and public repeaters. If there were more people wanting pairs than are available in any particular subband, then they would be out of luck. That would ensure that there were open repeaters available for the freeloaders. In practicallity, such repeaters would probably be run by a club, who subsidize the costs out of membership fees - if donations were not large enough.

: Let's look at the alternatives. Are you willing to say that
: repeater owners should be able to charge to offset the cost of
: establishment and upkeep of the repeater?

Personally, I don't think they should. Ask for donations, certainly, and I would even encourage it.

: If so, then what do you do about people who do not pay? Should
: they get the same level of authority to access the repeater than
: people who do help in the repeater's upkeep?

Same level of authority? Not necessarily. However, they should have access on a secondary basis.

However, I realize this is unlikely to happen (unless Hams go to digital repeaters). That is the reason for the "bandplan" comment I made above.

: Should the repeater owner be able to limit access for people who
: do not pay?

: If so, how does that differ from a "closed" repeater? If you are
: willing to accept this line of reasoning, then you must acknowledge
: that your definition of "open" repeaters is no longer valid.

See above.

It would be nice if we had unlimited bandwidth, but I suspect that we are going to lose more and more of the frequencies above 30 MHz, as the government sells them to the boys with big bucks. Maybe the ARRL should try to buy some of those frequencies.

Bill

Enough to go from the radio to the antenna.

If you are worried about coax losses, use the lowest loss coax you can
afford. Just don't have a lot of excess length - as length does equal
loss.

>For one thing, you have no "rights". You have "privileges" that are
>accorded to you by the terms of your license.

That's right.

At one point, Novices had only crystal frequency controlled
privileges. Now they have VFO privileges.

Right now, closed repeaters are privileged to operate under
repeater coordination governance. Tomorrow, they may be
outlawed.

Amateur rules and privileges are generally based on good practice
and incentives, but are often quite arbitrary. If enough people
complain and petition the FCC (which is hard to believe they haven't
done in So CA), operation of a closed repeater could be outlawed
for the same reasons that any multitude of practices are -- they're
not in the spirit of Amateur Communications and are therefore bad
practice.

Among these practices are transmission of music, transmission of
ciphers, transmission on frequencies not allowed by your operator
license class, and transmission using excessive power.

And, if all else fails, operation of a closed repeater could be
outlawed on a strictly arbitrary basis.

At one point, repeater operation opened up a whole can of worms
about the control operator being responsible for all transmissions
going through his/her repeater equipment. The FCC resolved all that
through one swoop of the pen (i.e. arbitrarilly) with 97.205 (g).
It seems that as spectral space becomes more and more of a critical
issue, the FCC could quite reasonably put in place the following
regulation:

97.205 (h) "Closed" repeaters are prohibited.

(Or some variation of the above.)

Hello all, I'm taking my Test in 2 weeks, Need A radio but the wife says too many toys!! So to make myself happy without angering her I'm looking to trade a seven month odl General Intrument C-100 Receiver, VCRS internal Descrambler, 7 Foot C-band mesh dish, Ant actuator, and everything else needed for setup. I would like to get any of the following for it..

BOAT ANCHORS
Yaseu 101 series
Yaseu 401 series
Set of Kenwood Twins R599-T599
GOOD rotor
Kenwood Mobile Rig HF
Yaseu Mobile Rig HF
BOAT ANCHORS
Uniden HR2510 or HR2600
Ranger 3300 or 3500
Any other Portable 10 meter rig

If you have a use for C-Band Sat Sys and have any of the Above Please Email me at:gamrunrr1@juno.com

Or Phone me at:715-484-8134 eves are best.

I wonder if the family isn't in cahoots on this - Grandparents file
bankruptcy, Homeowner's insurance pays, Everyone profits.
Get a few crapola TV show appearances & a book.
Grandparents now live high on the hog in retirement.
Children inherit estate.

So they say, well, let's at least get something positive out of
the bad situation, eh?

Probably how a lawyer's mind works.

If I had to guess, based on no other information, I would guess that this is a scheme to get around the inheritance tax, which will tax a bequest from the grandparents to the kids or grandkids, at a confiscatory rate of 45% if they have a sizeable estate.

On the other hand, tort damages for physical injury are generally excluded from taxes. Therefore, the unfortunate injury to the daughter may be a vehicle for all concerned to avoid the inheritance tax. (Or it may not be; I'm only guessing).

Sounds like a clever scheme, by a clever lawyer. The kind of lawyer people pay good money for.

2076. What causes hams stress

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-30 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <32A02EBF.210B@ccsnet.com>
Source record: 211685

Here is the list of stressors, along with their relative weights, from
Drs.
Thomas H. Holmes and Richard H. Rahe, psychiatrists at the University of
Washington Medical School. K1OIK made certain additions:

Event Relative Rating
Talk to an attractive female direct 200
Talk to a female on the air 103
Forced to sell rig 102
Theft of rig 101
Death of spouse 100
Ham takes a bath or shower 100
Antenna falls 100
Try to fix own rig 99
Spouse walks into ham shack 99
Divorce 73
Receiving a packet message 69
Marital separation 65
Jail term 63
Death of close family member 63
Sending a packet message 54
Personal injury or illness 53
Listening to a repeater 52
Marriage 50
Fired at work 47
Marital reconciliation 45
Retirement 45
Change in health of family member 44
Pregnancy 40
Sex difficulties (all hams have this) 39
Gain of new family member 39
Eyeball "QSO" 34
Change in financial state 38
Death of close friend 37
Death of a ham friend 01 (all hams are dead anyway)
Change to different line of work 36
Change in number of arguments w/ spouse 35
Change in number of QSOs 33
Mortgage over $10,000 (!) 31
Foreclosure of mortgage or loan 30
Change in responsibilities at work 29
Son or daughter leaving home 29
Trouble with in-laws 29
Outstanding personal achievement 28

Outstanding ham achievement 67
Wife (spouse) begins or stops work 26
Begin or end school 26
Change in living conditions 25
Revision of personal habits 24
Trouble with boss 23
Trouble with rig 87
Change in work hours or conditions 20
Change in residence 20
Change in schools 20
Change in recreation 19
Change in call sign 99
Change in church activities 19
Change in social activities 18
Mortgage or loan less than $10,000 17
Change in sleeping habits 16
Change in # of family get-togethers 15
Change in code speed 15
Change in eating habits 15
Vacation 13
Christmas 12
Minor violations of the law 11
Receiving a QSL card 09
Ham's child dies 07

Feel free to make additions and I will update the list.

2077. The "I" man is on ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-30 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <32A02EF6.2F23@ccsnet.com>
Source record: 211686

Hams suffer from the "I" disease.
I did this.
I did that.
I worked this country, I bought that rig, I got my Extra, I am going to work the contest, I put up a 30 element 20 meter beam, I visited W1AW
I work at.....etc etc etc. The only time they say "we" is when they really mean "I."

In a contact see if a ham E V E R asks YOU about Y O U .

What others say:

from unix.ccsnet.com by ccsnet.com with smtp
Date: Wed, 5 Jul 1995 15:21:00 EDT
From: Joe Esposito <jesposit@SCTCORP.COM>
Subject: Duh!
To: Multiple recipients of list HAM-L <HAM-L@TREARN.BITNET>

Well Burt, you finally said something I can agree with!

How many times have you heards folks say that they wanted the other guy's name, QTH, etc. for the log? My log couldn't care less about that information. Whenever I ask, it's because I want to know.

73,

Joe, K2YJL/M

And my response:

Hams cannot stand to be personal. Thus they do not want to know THE name, the log wants to know THE name. Thus it is impossible for a ham to say "I would like to know YOUR name." A ham says, "What is THE name for the log?"

Burt, K1OIK.

I'd suggest a couple feet extra, in case you ever want to move the radio to
dust under it. And don't use RG58 on 2 meters unless you really have to........

I have sent a couple more articles for posting at the web site.
6AQ5A_1.GIF and SCROUNGR.GIF
The latter is an article sent to me by WB6TNL describing his homebrew
6L6 TX that he has been having fun with.
Some of you fellers might enjoy building these "oldies but goodies!"

They are simple one tube "junkbox transmitters" that you can put
together from scratch in one day once you have collected the parts.

The articles can be found at:

http://www.barepower.net/~carreiro/

or take the LINK there from -

DIVISIONAL NEWS

The Wireless Institute is endeavouring to assemble a case to submit to the SMA regarding the possible modification to the new fee structure of $50.00 per transmitter at each repeater site, and reverting to the one affordable licence fee per site.

The big concern is how this new fee structure will affect your Club, and the effects on emergency repeater working, if repeaters have to be closed down. An urgent request was posted to the Secretary of each Affiliated Club on 27th November, seeking your Club's predicament Please make sure you read this letter before you send your reply.

However, the matter is urgent, so please can you respond this week. If you need further information, phone Ken on (063) 75-1347 or phone Amateur Radio House on (02) 9689-2417 or the Country Members' number (1800) 817-644.

Secretaries and Repeater Officers - please don't forget we need your letters as soon as possible, preferably this week.

AFFILIATED CLUBS NET
The next Affiliated Clubs Net will take place on Sunday 15th December on 3 decimal 595 Mega Hertz immediately after the call back on the VK2 evening broadcast. As this will be the last one before Christmas, I hope to be able to wish at least one member of every Affiliated Club the greetings of the season on that net, so how about coming up?
--Ken Westerman VK2AGW. Affiliated Clubs Officer, VK2 Division.

The next examinations will be held at Amateur Radio House Parramatta on Sunday 15th December 1996. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

Please apply to the office for the necessary forms. Applications close on Thursday 5th December. Acceptance cannot be guaranteed for any applications received after that date.

Affiliated Clubs Conference report - Part II
NTAC/SMA
The chair for this session was taken by Geoff McGrorey-Clark VK2EO, Vice Chairman and Chairman of the NTAC Committee who explained to the conference the role of NTAC and how it worked. He pointed out that there is a great deal of painstaking, detailed, work needs to be done when a repeater application is received to ensure that the frequency requested and/or location will not cause interference to other existing repeaters.

Roger VK2FGE of Armidale asked if there was a Divisional Policy regarding the numbers and frequencies of repeaters - particularly packet repeaters Geoff VK2EO, replied by explaining the WIA Band Plans and their significance.

The problems of pager interference was discussed as some length as was the inconsistencies being experienced by many clubs in respect of repeater applications and applicable fees.

It was suggested by the Conference that a liaison committee should be set up to discuss such problems and inconsistancies with the SMA. Geoff VK2EO pointed out that a Federal Liaison Committee had been in place for quite some time and that about 3 months ago a similar arrangement had been instigated in Sydney by the VK2 Division with regular meetings with the SMA Sydney management.

The question of Examinations was then raised and a suggestion made that perhaps the Examination Service and the SMA should be looking at a similar system to that currently operating in New Zealand. The New Zealand system was a single Theory Paper with about 80 questions. The level of the pass, and therefore the type of licence, was determined by the percentage of correct answers - eg 60%, or more, correct gave a Novice pass and 75%,or more, correct a Full Call pass. By this system a candidate who sits for the examination may just fail to qualify for full call - obtaining say a 70% - but instead of failing completely would still would qualify for a Novice pass.

Barry VK2AAB of AAPRA moved, seconded Frank VK2XBJ of Hunter - "That a proposal be put to Council, Federal and the SMA to consider replacing the existing two Theory examination papers with one graduated multiple choice examination having an increased number of questions graded into levels of difficulty. The level of licence to be determined by percentage of correct answers to the one paper (thereby ensuring that a narrow fail to AOCP will guarantee an automatic pass at Novice level". Carried - voting being 11 in favour and 4 against.

Barry VK2AAB was nominated, and agreed, to prepare a proposal to put before the VK2 Council.

The Chairman, Geoff VK2EO, then adjourned the Conference at 17.30 hrs for dinner. Prior to the meeting breaking up Jo Harris VK2KAA announced that as a matter of historical interest Stan Bourke VK2EL, the delegate from the Mid South Coast Club, had been a member of the WIA for fifty (50) years. This was acknowledged by applause from all present.

Guest of Honour
Following dinner Geoff VK2EO invited Mr Bill Vlies, Acting Manager of SMA Sydney to address the Conference. Mr Vlies introduced himself and gave a brief resume of his background adding that most of the aircraft he had worked on would now be in museums! He told the Conference that his instructor at that time did not concern himself with transistors as he considered them to be a "passing phase".

He spoke at length of the SMA and the whole range of their activities and the position of the SMA in the Government Agenda - which is committed to a "User Pays" strategy. He described the Amateur Spectrum frequencies as being like National Parks and Bushland National Parks - entry is restricted and the User must pay.

Mr Vlies then went on the answer questions which had been received from delegates prior to the Conference.

Policy of SMA regarding retention of CW? (Hunter branch) Mr Vlies said that the SMA had no CW policy as such but a policy was in place of abiding by ITU regulations - i.e. if the ITU drops the CW requirement so will we! Until such time as the ITU regulations change CW will remain a requirement in Australia.

AOLCP discrimination when compared with Japan? (Hunter branch) Mr Vlies said that the Japanese system was archaic and licence fees costing about three times as much as Australian Licences. He said the system called for each mobile to be licenced separately and licences are based on power output. Station inspecytions are required for outputs of 200 watts or more.

AOLCP & HF Mobile operation in Emergency situations? (Hunter branch) Mr Vlies responded that to allow Limited Operators to use HF in mobile situation during emergencies was inappropriate to the administration of the Radio Communications Act of 1992. He pointed out that the Act does have emergency provisions allowing WICEN stations to be licenced at short notice anywhere within the state.

Why does the reciprocal arrangements with Greece allow Hellenic AOLCP holders HF privileges? (Hunter branch) Mr Vlies agreed that there was a discrepancy which had come about several years ago and that it was extremely difficult to change something like that if discovered at a later date - bearing in mind bi-lateral agreements etc

A number of questions had been submitted by AATC regarding the Olympics arrangements on Friday prior to the Conference. Mr Vlies commented that he is on the Communications sub-committee for the Olympics and because no decisions had been made on the points raised he was unable to provide answers at this time.

The Chairman, with Mr Vlies' agreement, then invited questions from the floor.

In answer to a number of questions regarding fees and rumours of an increase which had been circulating, he said that licence fees had just been reduced to $50 effective 11 November. However repeater licences would now also be $50 per frequency or frequency pair. The fee to issue new or changed licences would also be a flat $50 instead of being costed at $91 per hour for administration plus the licence fee itself.

Delegates raised a number of questions regarding interference, especially pager interference. Some delegates also raised specific areas of contention with various SMA offices.

Mr Vlies requested details of the various problems be submitted in writing so that investigations could be carried out "If you have a complaint - put it in writing so we can sort it out" he said.

Bob V2JR (AATC) asked about "Pirates" - for example do they have to be caught operating or is it an offence to own the gear? Mr Vlies responded that unless you are a licenced amateur it is an offence to own amateur gear and furthermore the SMA will act on any complaints received.

The Chairman, Geoff VK2EO, thanked Mr Vlies for coming along to the Conference to which Mr Vlies replied that it had been a pleasure, had been extremely useful, and that he had thoroughly enjoyed taking part.
An enthusiastic round of applause was given by all present.

-- Eric Fossey VK2EFY, Divisional Secretary. We'll have part 3 of the report next week

WIA - NSW DIVISION
CHRISTMAS BARBECUE
TO BE HELD ON SATURDAY 14th DECEMBER
AT 59 WESTBROOK AVENUE WAHROONGA FROM 4.00 PM
ALL MEMBERS OF THE NSW DIVISION AND THEIR FAMILIES
ARE INVITED TO ATTEND.
COST $10.00 per head.
Swimming Facilities available.
All food provided. Please bring your own drinks.
Please advise numbers, with payment, to the office
by 6th December,
so Jo knows how many to cater for.

The 1997 Call Book is now available from the Office. The price is $14.95. Discounted price to members is $13.00. If you want it posted to you, please add a further $2.50 for postage and packing.

DURAL XMAS PARTY.
The usual end of broadcast year function will be held on Sunday the 22nd December at the conclusion of the morning callbacks. This is early advice for you to note the date on your calendar.

WARNING
The December issues of both ELECTRONICS AUSTRALIA and SILICON CHIP carry a two page colour advertisement from a large electronics company, that should have known better. Among the items advertised is a 'Huge 150 Watt Wire Wound Resister - Use as a dummy load for ham radio, amplifiers, etc., 7.5 ohm."

This is a timely reminder of your radio and electronics theory, that wire wound resisters are no good as dummy loads. While they may have a resistance of 7.5 ohms, this is only at DC. Wire wound resisters are inductive and so will have a large impedance at radio frequencies. These impedances will also change as the frequency changes.

--Peter VK2EMU

WICEN NEWS
This month's meeting of the Management Committee, on 14th December, will be somewhat brief, as it will be followed by a barbecue; bring your own everything, and a grill will be supplied. We thank Burwood SES for their hospitality.

The only exercise this month would appear to be the Lion Island Speedboat Classic, on Sunday 15th December; the organiser for this event was not known at the time of writing.

This is followed by the Hunter region barbecue, on the 21st December. Next year sees the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March; the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

Those regions wishing to have their activities publicised on this broadcast are requested to have the details with the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to VK2KFU@VK2KFU (AX.25) or vk2kfu@gw.vk2kfu.ampr.org (TCP/IP).
Fax is acceptable, to (02) 9922-5286, for the attention of Dave Horsfall, but they are likely to be summarised; e-mail is also acceptable, to dave@fgh.oz.au.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS
HAM RADIO ON SPACE STATION
A foundation has been laid to give Amateur Radio a permanent presence in space. Earlier this month, Amateur Radio delegates from eight countries--Russia, Japan, Germany, Great Britain, Italy, Canada, France and the US--met at the NASA Johnson Space Center in Houston, Texas, to map plans to include a permanent ham radio station aboard the International Space Station, to be tended by station crew members.

From the United States, members of the SAREX Working Group, officials from NASA, US representatives of the Russian Mir Amateur Radio experiment and members from the Johnson Space Center Amateur Radio Club attended the meetings November 4 and 5, chaired by Roy Neal, K6DUE. ARRL Vice President Joel Harrison, W5ZN (ex-WB5IGF), represented the League at the gathering. SAREX Working Group member Rosalie White, WA1STO, of the ARRL Headquarters staff, was among those on hand. The delegates jointly developed a draft memorandum of understanding to promote the development of Amateur Radio on the International Space Station--to be known as ARISS.

The ARISS group will provide for the planning, coordination and performance of Amateur Radio projects on the space station, similar to the way the SAREX Working Group currently coordinates Amateur Radio activities on many space shuttle missions. AMSAT and IARU organizations

in each of the eight countries are to review and consider approving the memorandum of understanding. In the US, this includes AMSAT-NA and the ARRL.

The AMSAT-NA Board unanimously approved the memorandum of understanding at its November 11 Board of Directors meeting in Tucson, Arizona. Once the memorandum is finalized, AMSAT-NA President Bill Tynan, W3XO, has been given authority by the board to sign it. AMSAT-NA Vice President for Manned Space Frank Bauer, KA3HDO, congratulated the international ARISS team for a job well done. ''We look forward to a truly cooperative international venture on the International Space Station,'' he said.

-- ARRL Space Bulletin #16, dated 27th November 1996

DOVE-OSCAR 17 UPDATE
After nearly a year of problematic operation following an onboard computer crash last December, scientists on the ground may have finally pinpointed the source of problems plaguing DOVE-OSCAR 17. Jim White, WD0E, of the AMSAT DO-17 team, reports that on November 5, a portion of the operating software was successfully loaded into DOVE and executed. "The first few minutes of telemetry shows the satellite is in pretty good shape, with some expected degradation of the solar panels and batteries," he said. The software included a change by Keith Butts, KN6K, that increases the number of times per second the hardware watchdog timer is reset. White says that extensive tests over the past year--and coordination with the WEBERSAT team--have indicated an intermittent watchdog timer may be the culprit that has made it impossible to keep software running for more than a few days in either satellite. All other hardware testing on DOVE had proved negative.

White says time will tell if the command team reached the correct diagnosis. At this point command stations have all the telemetry they need. However, if you don't hear DOVE on 145.825 MHz when it is in range, send an e-mail message to wd0e@amsat.org indicating the time you listened. If the satellite crashes again, it may be valuable to know as closely as possible when it failed. DOVE is sending in the normal PHT telemetry format, the S-band transmitter is on, the telemetry rate will vary from 20 to 60 seconds, and the transmitter power will vary from 2 to 4 W. All previously used telemetry decoder programs will work as they have before, including several shareware programs and TLMDCII, available from AMSAT-NA headquarters.--Amsat News Service; Jim White, WD0E

--The ARRL Letter 15th November, 1996

CLUB NEWS
Radio Veterans Group
Members of the Radio Veteran's Group are reminded that the last meeting of the Group for 1996, scheduled for December 19th, is a Special One. XYL's are included in the invitation,Tea, Coffee and a Christmas Cake will be provided.Bring enough food for yourselves and share it.

--Franklyn (VK2DYP) Convenor.

THE HORNSBY AND DISTRICTS AMATEUR RADIO CLUB
Well last Tuesday was our final meeting for 1996. That is another year past, and the Club would like to thank, the Broadcast Team and those that keep Dural in service. For the way, in which they have presented, our news to the many listeners that tune in each Sunday, the Club has gained from this service. THANKS TO ALL CONCERNED.

Also the Club thanks VK2TVG Television Gladesville, for the relay of the WIA News each Sunday Evening, and the retransmission of Clubs News each Wednesday Evening. THANKS TO GLADESVILLE AMATEUR RADIO CLUB and ALL AT VK2TVG.

The last meeting for 1996., was followed by a lecture on life in Antarctica, by Marque Crozman VK2ZLZ. This lecture was well illustrated, and enjoyed by all present.

Next meeting on the 28-1-1997, a special meeting for prospective Amateur Operators, to let them know the various types of Certificates of Proficiency, and how they relate to the various classes of licence that may be obtained, with a bit of study. More on this subject each week.

Remember the Club Net. But before I continue, we apologize for last Monday Night, as after the Net was opened it appeared that VK2RNS had a little trouble, which is almost certain to be rectified by next Monday, So Join the Net All are welcome. the Frequency is 147.250 with a positive offset.

--Submitted by John VK2WRT, Publicity Officer.

I said: "I have a VIC 20 I want to trade for a IC-781" (how long do we have read thesre messages where some ham wants to trade his junk for something woth something).

From: KH2KQ@KA6EYH.#NOCAL.CA.USA.NOAM
To : K1OIK@KQ1K.MA.USA.NA

Hello Burt,

You actually got one of those VIC-20's you wanna trade?

I do not have a Icom 781, but I does have a Kenwood 950SDX - howsa bout dat?

Only problem is dat it am attached under the counter of a 36 foot motorhome. So if youse trade for da 950 youse gotta take the motorhome too. Its got a generator and only 123 actual miles. But the problem der is dat it am havin a dead battery and it can't start and it is in the driveway of my vacation home at the beach in Malibu - so youse also gotta take the house in Malibu if youse want the 950SDX.

Howsomever, there is a beach bunny and her girlfriend that said they would just die if I sold the Malibu house on the beach, so they come with the house and the motorhome and the radio.

If dat am OK, then weese got a deal!

Oh yeah, does the VIC-20 got a DC power supply with it?

By the by, if you hear of anyone who has a Kenwood TS-50 attached to a Mercedes 450SLC - I would like to trade a Radio Shack 202 for it!!!!!!!

2087. bike mobile

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-30 00:00:00 UTC
From: Leo Potjewijd <pe1rhx@worldonline.nl>
Message-ID: <57pg3l$nu@neptune.worldonline.nl>
Source record: 211696

Hello fellow biking hams!

As a contribution to the bike-mobile discussion here is my setup:

Biking dayly fo and from QRL (30 min. ride through the heart of Amsterdam) i use my Albrecht RL102 2meter transceiver with a homebrew 1/4 wave antenna (of 1 mm springwire in a BNC plug) directly on top.
With this antenna setup i can work most 2m repeaters of in a radius of approximately 30 miles, buildings and conditions permitting.

The transceiver goes into my left front/breast pocket of my jeans jacket, secured by the clip. The only drawback is that i cannot see the display that way.

The speaker/mic arrangement i use is a cheap PC multimedia headset with changed plugs and a ptt switch built into the mic cord. A small surplus pushbutton (as used in many discarded VCRs) is easily mounted directly in the cord and finished with 2-component resin or glue.

A spare battery pack (i have approx. 2 1/2 hours of use with one pack) goes anywhere convenient, but quickly reachable (utility pocket of backpack, or coatpocket).

You DO get a few strange looks when you ride along wearing a headset with the antenna sticking out of your pocket and talking to an invisible person. When stopped for crossroads, people may even stare at you as if you were from a different planet, but what the heck.

Have fun and keep in mind that the traffic CAN kill you.....

73 de PE1RHX, Leo.

P.S. Anybody really knows about that transceiver of mine? Seems to be sold under various names, including REXON. Wanna know about the little solderlinks inside: which does what?

>>For one thing, you have no "rights". You have "privileges" that are
>>accorded to you by the terms of your license.
...
>Right now, closed repeaters are privileged to operate under
>repeater coordination governance. Tomorrow, they may be
>outlawed.

Bzzzt. Sorry, wrong answer. But thank you for playing Amateur Radio
Jeopardy.

Spectrum management associations have no authority over determination
of "open" or "closed" repeater status. Their function is simple: to
reduce inter-repeater interference. 97.3(20) is quite clear on this
point.

Your privileges to use a repeater are solely at the discretion of
the repeater trustee. 97.205(e). At any point in time a trustee
can tell you to scram, if for no other reason than he/she doesn't
like your voice, and is sick of listening to it. This regulation
has been further clarified by the FCC PRB to mean exactly what it
states. Jim Johnson, Chief, PRB, Feb 1 1994: "Rule 97.205(e), without
qualification, permits the individual responsible for the proper
operation of a repeater to limit the use of a repeater to certain
user stations."

By FCC definition: all repeaters are "closed". Whether or not you
can operate there is solely up to the discretion of the repeater
trustee. Some trustees can be really liberal and allow anyone who
wants to use the machine on. Others might be really conservative
and only allow those people on that the trustee personally knows.
Both instances are fully legal according to FCC regulations, and
spectrum management agencies do not have the authority to usurp
that authority and >force< repeater trustees to disregard the
rules and regulations of a federal agency.

>Amateur rules and privileges are generally based on good practice
>and incentives, but are often quite arbitrary. If enough people
>complain and petition the FCC (which is hard to believe they haven't
>done in So CA), operation of a closed repeater could be outlawed
>for the same reasons that any multitude of practices are -- they're
>not in the spirit of Amateur Communications and are therefore bad
>practice.

Your statement above contridicts with your first paragraph. Only
the FCC has the authority to "outlaw" closed repeaters. Doing such
would require rewriting of 97.205(e), which I highly doubt would
ever under any circumstances, happen, since your license is your
license, and if you have a repeater operating under your license,
You and only You have the authority to allow someone to operate
your equipment or under your license.

>Among these practices are transmission of music, transmission of
>ciphers, transmission on frequencies not allowed by your operator
>license class, and transmission using excessive power.

None of which has to do with closed repeaters. Next.

>And, if all else fails, operation of a closed repeater could be
>outlawed on a strictly arbitrary basis.

Arbitrary by whom? The spectrum management agency? Ha. The FCC
doesn't specifically recognize the authority of a spectrum management
agency over another. Should one group attempt to de-coordinate a
closed repeater, the Closed Repeater Coordination Society will glady
extend coordination under the repeater's original coordination
parameters.

>At one point, repeater operation opened up a whole can of worms
>about the control operator being responsible for all transmissions
>going through his/her repeater equipment. The FCC resolved all that
>through one swoop of the pen (i.e. arbitrarilly) with 97.205 (g).

My understanding of the original thrust behind 97.205(g) was packet radio,
and station operators being responsible for retransmission of packet
messages that violate amateur regulations.

While it may certainly be applicable to voice repeater systems, it
certainly does not excuse a voice repeater owner from allowing
garbage on his repeater. To do so is akin to a dog owner having his
dog plop a huge dog chip on the ground and not clean it up.

>It seems that as spectral space becomes more and more of a critical
>issue, the FCC could quite reasonably put in place the following
>regulation:
>
>97.205 (h) "Closed" repeaters are prohibited.
>
>(Or some variation of the above.)

Doubtful. For one thing, 97.3 does not define a "closed" repeater.

>
>>Long enough to go from the antenna to the radio.
>
>When I wrote this message I worded it wrong, I meant, What length of
>coax should I use, that loss won't be a major problem.

The shorter the better. I use 50' of RG58U without a problem, with a 10 watt radio. I think I just saw a chart about coax line loss the other day. If you want to minimize loss, look at RG213 or 9913. RG8 is almost as good, about 1 or 2 db per 100', I think. RG8X is close to RG58U, around 4 db per 100', as best as I recall.

But the first question reminds me of the fellow that went to the lumber yard and asked for 2x4's. The clerk said "how long you want 'em", and the fellow said "Oh, a long time, we're building a house". :-)

Hello. I am looking for the following 2 books published by RSGB.

1) How to pass the RAE
2) Examination Manual

The novice examinations is in less than 2 weeks, and I don't have any study materials. I stay in Kuala Lumpur, Malaysia, and it would take a long to wait for RSGB to send the books via surface mail.

Is there anyone out there who have a copy of the 2 books and no longer needs them, or can buy a copy for me please e-mail me?

Thanks in advance.

It will depend upon your needs.
If RF circuits are your major interest then the ARRL has a pretty good package.
I use a combination of PSpice, Analog Workbench, and ICAP 4 for Worst Case Analysis of analog and power circuits. They are all in the multi $$ class.
Each has its own advantages and problems.
The most important consideration is the models available.
I think most of the products have "student packages" designed for the beginner --- big savings.
Enjoy!

Does the XYL also have a trash compactor? :-)

You *can* suppress the hash from these things, using all the usual
techniques, IE bypass caps and chokes. But unfortunately they depend
for their "touch" action on picking up stray EMF fields via body
capacity. When you suppress the hash, you'll also likely suppress
the "touch" function. Get rid of them.

>
>Thanx -- Pete -- KA2YDY

It almost certainly *was* RF. If you still had that D104 it would have burned your lips too (been there, done that). Your rig is hot with antenna currents. Your ground system probably isn't an effective RF ground, and your antenna system certainly has a balance problem.

You probably can't do a lot to improve the RF grounding of the rig. To be effective, your ground run would have to be much less than a 1/4-wave long on the highest frequency band you operate, IE no more than 3 or 4 feet to Earth for 10m operation. Though if you can make it a 1/2-wave long (or a multiple of a 1/2-wave), and make sure it is tuned, it can serve as an effective RF Earth ground conductor. That's the basis for MFJ's "ground" tuner.

(A 1/4-wave transforms a low impedance at one end to a high impedance at the other, so it is virtually the same as no ground connection at all at the frequency where it is a 1/4-wave (or *odd* mulitple). A

1/2-wave (or multiple) repeats the same impedance at each end, so it *can* serve as a low impedance path for RF to Earth. Obviously, if you're going to operate multiple bands, it is going to be hard to arrange this for every band.)

The real problem is that your antenna isn't balanced, so your feedline (and rig) have become part of the antenna. The G5RV *is* a balanced antenna, but the feed is not. If there is no balun at the coax termination to the balanced line, you're going to have antenna currents flowing back down to the rig.

There are a couple of solutions. First, you can forget about the G5RV idea and just feed the antenna all the way with balanced line from a balanced tuner in the shack. That makes it a traditional all-band flattop doublet, and it'll actually work better than with the G5RV feed. Since everything is now balanced, the hot shack problem will go away. (You won't need an Earth ground at all, except for electrical safety reasons.)

But your radio has a coax tuner built in, and you probably don't want to go out and buy a separate balanced tuner for your antenna. So the second solution is to put a choke balun at the transition between the coax and balanced line of the G5RV. That'll restore balance to the system, and eliminate the hot shack problem.

The simplest choke balun is to just tightly coil 8 to 10 turns of coax right where it attaches to the balanced line. That may be all you need. If that doesn't do it, then you may need to slip ferrite beads (big ones) over the coax at the transition.

Additionally, with the antenna so close overhead, you have to be very careful how you route the feeder. The balanced line should be routed at right angles to the antenna, and well away from any other conductors. The coax should also not be allowed to parallel the antenna. If either one does parallel the antenna, then RF will be induced on it, destroying balance, and letting the shack be hot with RF again. (Poor cable routing can undo the good a balun may accomplish, so make sure the routing is correct.)

A final thing you can try is to attach several counterpoise wires to the radio. These are just 1/4-wave long wires which are *unconnected* at the far end. Remember, a 1/4-wave inverts impedances end to end, so that open will look like a low impedance at the rig. This is basically an artificial groundplane. Your antenna pattern may be wacky with this setup, but the high RF voltages should disappear from the rig and the accessories connected to it.

BTW this problem has *nothing* to do with SWR. You could have a perfect 1:1 SWR and still have this imbalance problem, and

a hot shack. And a high SWR won't give you a hot shack *if*
the system is in balance. In fact a high SWR is often your
friend because it allows transmission line transformers, like
the one in the G5RV feeder design, to work, thus allowing you
to transform the impedance of the load to something your radio
will like.

>which are all they can afford - rigs that are CW-only.

James, as one who has lived for extended periods and traveled extensively in "third world countries" I can tell you that you're the victim of another Morst Myth (that foreign hams are predominantly poor people who can barely afford to scrounge together one-tube CW rigs ...)

I can tell you from personal experience that, even in the poorest countries of Latin America, the hams have money and their rigs are, for the most part, the same genre of "rice boxes" that American hams use ... they are NOT CW-exclusive ... they use SSB, RTTY, packet, etc.

If anything, they are more prone to have the latest DSP gizmo, multi-mode TNC, or whatever ... because they tend to be "adopters" of new technology and its benefits (rather than "resistors" like many American hams ... they don't seem to have lost the interest in the technology like the "yackers and gamers" in America).

As for income and abilitity to afford gear ... foreign hams are mostly middle --> upper-middle class, economically-speaking ... business people, managers, and professionals ... they have the leisure time and the disposable income to be hams ... the bottom-of-the-ladder poor person is too busy scraping out a living and has neither the time, interest, or education for ham radio ... to them a "hobby" is something like fishing where they can get some enjoyment and feed their face at the same time.

>And where do we get all the power to run RTTY/TOR/SSB in a long-term
>emergency? If all you got is 12 volts, and no probability of AC for the
>forseeable future, you might just wish you knew a little outmoded CW.

All hams should strive for reliable backup power supplies for just this case (extended outage due to disaster) ... modern solid-state rigs generally run from 12V ... notebook computers can be equipped with charging adaptors that plug into a car's cigarette lighter (or similar) .. and spare batteries can be charged by hoooking them to a car with a set of jumper cables ...

Try using your imagination and technology to solve potential problems, rather than simply downgrading everything to some minimalist level of capability because you can't envision how to make things work ...

Well ... sorry to say but most of the US callbooks do not have very complete listings for JAs .... but, that is understandable. As far as I know .. there are NO "online" JA callbooks ...especially ones that can be read by 99.999% of computer users outside of Japan. Remember please that the Japanese do NOT use our roman alphabet and what is used .. is not readable by our computers, for the most part.

The hardcopy "callbooks" in Japan, as far as I recall, list ONLY those stations that are members of the Japan Amateur Radio League (JARL). There are over one million operator licenses issued - and about 500,000 station licenses. The JARL membership is somewhere on the order of 135,000.

The good news/bad news is that ALL JARL members can send and receive QSLs via the JARL buro as part of their membership fees. In the JA1 area, I used to receive my buro envelope like clockwork on the first day of every month. The bad news is that ONLY JARL members can utilize the JA buro. So ... IF 7L1WII is a JARL member he will receive your QSL via the buro ... otherwise .... I'd say you're s.o.l.

Good luck & 73,

>now it is not deviating good enough, although it seems to receive ok.

The problem is that the Mastr II (note no 'e') is a phase modulated
radio, not FM. Thus it can't do the G3RUH/K9NG modulation correctly.
The slickest fix I've seen requires you to replace the transmit Icom
in the radio with a Motorola Micor channel element and FM modulate
that.

The GE Icom just contains a crystal and a temperature compensation
network. The Motorola channel element is a complete oscillator, with
a varactor modulator. Thus it does true FM. You have to rewire the
Icom socket to accept the Moto element. The former GE oscillator
circuit now becomes a buffer stage. You can still feed 1200 baud
to the GE PM modulator, but now you can also feed 9600 baud modulation
directly to the Moto channel element and all is lovely.

>Let's look at the alternatives. Are you willing to say that
>repeater owners should be able to charge to offset the cost of
>establishment and upkeep of the repeater?

Absolutely not. That's providing communications for hire, and is expressly forbidden in the amateur service. The regulations *allow* a repeater owner to restrict who may use his radios, but he is expressly *forbidden* to charge *anyone* for communications services provided by his radio station.

Now if he sells *ownership* shares in the repeater, it becomes the community property of all its owners, and the several owners are free to contribute to its upkeep and operating expenses. A management committee can even assess the owners for annual expenses (just as condo associations handle their common property). That's a different thing. But lacking transfer of ownership rights, a repeater owner cannot charge others for providing them communications service. That's communications for hire, and is forbidden.

>When I wrote this message I worded it wrong, I meant, What length of
>coax should I use, that loss won't be a major problem.

The answer remains the same. Every foot of extra feedline beyond
the minimum needed to reach from antenna to radio adds loss. So
you want to use a cable which is just long enough to reach. No
more, and certainly no less.

If the run is long (over 10-12 feet), use good low loss coax,
not RG-58. Belden 9913, the Wireman's 4XL, or RG-213 are good
choices. For really long runs (over 100 feet), use hardline.

I would venture to guess that you are wrong. 25% of hams newly licensed in the past 5 years is tremendous turnover. These 25% probably comprise a much higher percentage of ACTIVE hands, i.e. actual users, as opposed to inactive chaps licensed before WW2.

>As I understand it, The HTX-202 was built by Maxxon under license with Icom. Ergo, ICOM batteries slide right
>on... There should be a few aftermarket suppliers for large capacity batteries.

Jim,

ICOM HAD NOTHING to do with the HTX-202. Its a Tandy and Maxon desogn all the way. There was NO license as there is nothing to license.. The rumors of a ICOM license are totally false. Tandy sent a letter to all managers of Radio Shack stores stating just that and told the managers to cease and desist spreading the rumor after ICOM took issue with the rumor being told by the Radio Shack store chain.

Tandy told Maxon to choose a major radio manufacturers accessory design and ICOM's battery attachment rails showed up on the radio. NOW I would not say the original ICOM batteries will work, others may have tried them though. If you look around you will find several knock offs of ICOM radios. Delcom is one that comes to mind. There is also a BC-35 charger floating around that says ICOM all over it, but it is not an ICOM. You can tell as it has a switch that switches between 110 V and 220 V input. The ICOM BC-35 requires you to change the internal power transformer to change input voltages.

once and I remembered it! Most likely it is a combination of 2 things.
Close proximity to the antenna and I'll assume the antenna may be being
used through a tuner and is non-resonant. You say it's grounded...well
maybe grounded to DC, but remember, at RF frequencies, the wire
connecting to ground may be a 1/4 wavelength long, presenting a high
impedance at your operating frequency, causing the RF to become "trapped"
at your keyer. And you know what that feels like! Try taking the
antenna out of the attic if possible or run QRP (< 5 Watts) and see if
that's better. Good luck...73, Scott, N0EDV.

2113. Audio mixer, vox circuits

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-01 00:00:00 UTC
From: Robert Brandon <rbrandon@austin.ibm.com>
Message-ID: <32A1F733.4FDD@austin.ibm.com>
Source record: 211469

I'm working to integrate my car stereo and my ham rig. Here's what I want to accomplish:

- audio from my ham rig produced through the car stero speakers
- car stereo muting when the ham rig squelch breaks

I believe I have the stereo (Clarion ARX 7270) and ham rig (Kenwood TM 733A) to make this work. First, I use an external amplifier for the car stereo so I have a easy point to tie in the ham rig audio. Second, the car stereo has a special wire that mutes the system when grounded. What I need now is:

- a simple audio mixer circuit to mix four outputs down to two
- a simple vox circuit to ground the mute lead

I'll need to split off the ham rig audio to trigger the vox circuit, and I'll need to attenuate the ham rig audio down to the low level needed by the car stereo amp. That should be simple, though.

I've looked in the 95 ARRL handbook and in the last couple of years of QST and can't find what I need. Does anyone know of some simple audio mixer and vox circuits I could use? Please reply via e-mail.

Thanks,
Robert K5PI

Let's tell it like it is - NO ONE could use Wayne's station in Hancock
because it created interference into the telephone system even running
barefoot. It wasn't any FCC rule violation just Wayne's order.

Several of us in the Lafayette area are using GE Custom MVP's with a simple
mod to operate 9600 bps using the G3RUH modems. Although txdelay could be
faster (shorter), it seems to work flawlessly.

Actually, the FCC not only doesn't require the physical location,
there isn't even a place to provide it on the application if you were so
inclined (assuming it's different from your mailing address).

It makes you wonder what the FCC would do should they actually want
to conduct a station inspection or investigate an interference
complaint.

Oh, silly me. I forgot that the FCC doesn't do these things anymore
anyway. :-)

To switch from 5 kHz to 10 kHz and back you have to press F
button and the REV button thathas STEP as second function..

For non standard Repeater Splits: (from the FT23 manual)

Memories 0 through 6 can also store an independent transmit
frequency, for operation on repeaters with non-standard
shifts.To do this, first store the receive frequency as
described in Memory Storage & Recall (that I assume you
know).Then retune the Dial to the desired transmit
frequency, and repeat the storage procedure, but this time
hold the PTT switch at the last step (when you press D/MR
the last time while the memory number is blinking.Now when
you recall the memory '+-' will be displayed together at the
upper right.The RPT key will be disabled while operating on
the odd-split memory, but the REV key will still function as
described above.

> Shack stores stating just that and told the managers to cease and desist
> spreading the rumor after ICOM took issue with the rumor being told by the
> Radio Shack store chain.

I just spoke with a gentleman at Tandy National Parts last week to order
a new memory backup battery for my HTX-202... We got to talking and he
said Icom sold the licensing of the IC2AT to tandy, tandy only used bits
and pieces of it, but the major electronics were designed from the
ground up by Maxxon to have no ability to be modified so they could
enhance intermod rejection etc... I have also seen this in several
files (Including a text file from ftp.arrl.org) published about HTX-202
mods.
Be interesting to get the story from Icom to see if infact they sold the
rights of the IC2AT to tandy or not.
Later,
Dave

Of course the definition does. Today's definition of a "right" is
your ability to do whatever you damn well please whenever you want
to do it. If someone stops/prevents you, they are infringing on your
"rights".

Hi George,

Circuitmaker uses industry standard input/output for it's SPICE, PCB layout and other files (from what I can tell). IOW, CircuitMaker can use the SPICE data from manufacturers while Electronic Workbench cannot.

Hi Jim,

SPICE requires a path to ground. Some programs that implement SPICE
will automatically (based on a software switch) place a 1 terohm
resistor between every node and ground -- but this is invisible to the
user.

I suppose "active" is relative. There aren't many contesters and only
a handful of CW ops. We also have few DX chasers. Some get on a regular
net but more as a social activity. We hold monthly meetings and have
about 70 licensed members.

The HTX202 can use the same accessories as the old Icom IC2 and IC02 series (which were extremely popular and developed a large aftermarket). You can use the speaker/mics, headsets, and *batteries* made for those radios on your HTX202. The big BP-8 battery will work, and can be bottom charged in the BC-35 drop in charger. Note however that this charger can cook your batteries if you aren't somewhat careful. It depends on the thermistor in the battery to tell it when it is overcharging, and that's already too late (though it is better than the straight timed chargers used by Yaesu and Kenwood in that era). Some of the more modern aftermarket chargers for these batteries use the superior pulse charging technique.

2137. Joining the ARRL -- Why?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-01 00:00:00 UTC
From: jim@rst-engr.com
Message-ID: <57sii3$87i@li.oro.net>
Source record: 211529

There has been a piffing match going on in this newsgroup between the various factions over the benefits and liabilities of joining the ARRL. Rather than just swapping epithets back and forth, how about those of us who have chosen not to join simply stating our reasons for not doing so?

Remember that what is said here will be opinion. That opinion may be based on fact, on supposition, on hearsay, or on the tooth fairy. In any event, it IS the opinion of the writer, and simply flaming the writer without providing substance to refute the opinion is useless.

Please note that I will be happy to carry on a dialogue in this newsgroup, but personal email on this subject will not be answered.

1. The ARRL does NOT represent my opinions in the political arena. So long as the League supports separate subbands for Morse Code, a concentration on contesting and awards, and a VERY ineffective lobbying effort, it does NOT represent me.

I will give you that there is not a substitute group that DOES represent me, despite Mr. Greene's continued promise of the last 20 years to start one. Quite frankly, I doubt Wayne's proposed organization would be any less representative of me and my goals. Seems to me that Wayne's promises are a little like Perot's. A dime short and a half hour late, no matter how well intentioned.

This is not to say that the League has not been of some minimal use in preserving the hobby/profession of amateur radio. Simple preservation without improvement is not what I choose to back with my support.

2. League publications are stodgy, poorly edited, and in some cases, technically incorrect. Yes, I've got a Handbook in my library, and I think I used it once last year to look up some pilot lamp data. I also note that roughly 75% of any given QST is given up to contesting/awards listings, ads, and other league administrative trivia. The articles that appear are by and large of the "How to use a twin triode as your AM AGC amplifier" variety.

I'll give you that in the last five years, there has been an excellent series on DSP and a couple of decent antenna articles. These exceptions do not convince me to part with my money for literal pounds of paper to the recycle bin. I've written for Greene. I've written for the League. Between the two of them, if editorial competence was gunpowder, they wouldn't have enough to blow each other's nose.

3. There are those who give the League credit for such things as Oscar, moonbounce, repeaters, and the host of "new technology" that has come on board in the last 25 years. Sorry, I don't buy it. None of these ideas

came out of the League. The League simply waited to see which ones would prove useful and have widespread acceptance, then embraced them as their own. I vividly remember monitoring the first FM repeater in the area on my new solid-state radio and listening to a heated discussion of the pros and cons of the latest tube AM rig design in the current QST. This one instance in and of itself does not prove the point, but repeated similar occurances have caused me to form my opinion.

4. I don't know any way to say this politely, so I'll say it bluntly. The ARRL is an old fat white man's organization. I say that as an aging portly Caucasian male myself. However, I can also say that there has been absolutely no visible effort expended to broaden the leadership in the top echelons of the organization. No, I don't believe in quotas. No, I don't believe in social engineering. However, somewhere along the line you've got to look at the top, secondary, and even the tertiary levels of the organization for evidence that we are welcoming all segments of the society into the power structure. With one or two minor exceptions, I just don't see that.

Of course, the argument can be made that this whole HOBBY/PROFESSION is populated by OFWM, and the governing structure is only representative of the group as a whole. I can't argue with that, but I will point out that unless we make one hell of an effort to get ALL segments of society interested in amateur radio that we will not survive long into the next millenium. And that would be a shame.

Flame away.

2138. Rohn self-supporting TILT-MODIFICATION?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-01 00:00:00 UTC
From: Mike <mikeats3@rconnect.com>
Message-ID: <32A1C3C9.7089@rconnect.com>
Source record: 211530

Greetings;

Has anyone seen a modification to a Rohn HDBX series
(self-supporting) tower which will enable it to be TILTED down for ease
of working on the antenna?

I have a HDBX-56 (56 foot self supporting) tower that I sure would
like to be able to "break" it in the middle someplace, and have it winch
over for ease of working on the thing!

Any help on this? Thank you! -Mike; K0JTA (Minnesota)

Pat,

Jim (and other pro-coders) have an agenda ... it's obvious, so I won't call it a hidden agenda ... they want to squelch any and all debate on the issue of elminating CW testing as a licensing requirement for HF access.

They throw up all sorts of strawmen, designed to evoke flames and unreasonable fears of the "terrible calamity that will befall ham radio if we eliminate CW testing" ... they also try at every possible opportunity to equate "eliminate CW testing" with "eliminate the use of CW", which is a toatally bogus assertion ... not one single no-code advocate has ever to my knowledge said "ban the code" ... we have all CONSISTENTLY said that is NOT our goal in any way ...

Anyway ... they like to bitch and complain and call anything they don't want OTHERS to hear "flaming" and suggest that those ideas and opinions should be banished from the newsgroups ... as you said, they could simply choose not to read messages, but it's more than that ... they want to SUPRESS the ideas that those messages voice ... because they're afraid that those ideas will catch on and become "the way things are" and they want things to stay "the way things WERE" ... stagnated in the past.

Just goes to show that there is NO conclsive evidence supporting the
claim that "the majority of active hams are ARRL members."

KB9JJA obviously travels in very different circles than I do ... the
vast majority of the hams that I associate with are NOT ARRL "members"
or are "members-only-to-subscribe-to-QST" who feel the the league is a
screw job by a bunch of old fogies who falsely claim to represent the
interests of all US hams ...

Hmmmm..... in over 10 years living in Japan, I never once heard that
"Japan refers to their 'CB radio' license as an 'amateur radio' license."
I wonder where you (Mike) heard that?

It IS true that >90% of all Japanese amateur radio licensees are of
the "no-code" (with HF privileges) type. They ARE required to take
a fairly lengthy classroom instruction and/or pass a written technical
examination.....neither of which are required for CB licenses
(to the best of my knowledge).

Then I rest my case.

I had thought that you and I were arguing about what were the correct definitions of `right' versus `privilege' in modern American-English usage. But it now appears that you were actually arguing against the unpalatability of what you do nevertheless accept to be `Today's definitions'.

I have been going for my General for a little while now and am having trouble memorizing the operating privlages. Anyone know any good tricks???

I am also having a hard time deciding what rig to get. The local shop has a lot of nice used rigs, but I have always been skeptical about buying _anything_ used, and I have been looking at a FT-840.

Any thoughts/suggestions? BTW, due to space limitations I will be restricted to a vertical antenna This won't ruin my chances of making a lot of world-wide contacts, will it?

Thanks a lot for your help! I have been stuck on 2-meters for over 6 years now and I am ready to take the plunge... but I hardly know anything about it.

> technique.

Hi Gary,
Radioshack recomends that bottom charging be done with the battery
removed from the radio. They state there are a couple Zener diodes that
can be destroyed in the radio if you leave the batt on the HT... they
also suggest only using the external 12V power to the jack on top with
the batt off so the zeners don't get destroyed as well.

Take care,
Dave

Here in the New York City Metro area they are a "Real pain in the ass!"
They pop up on repeater inputs, simplex freqs, between repeater outputs.
Around here they are generally discouraged. What do you need it for?

We are planning on taking a driving trip (in a conversion van) in late March. We will have about 9 days to do this. We are looking for comments on the proposed route, alternative routes, good hotels/motels, restaurants, speedtraps, must-see parks or attractions, etc, or ***good 2m repeaters***. Here is the proposed route:

Leave Madison, Wisconsin
I-90 through Chicago to northern Indiana
I-65 to Indianapolis
I-74 to Cincinnati
US-52 to Huntington, West Virginia
I-64 to Charleston, WV
Either stay on I-64 or take US60 to Crowley, WV
I-64 through Richmond to Norfolk/Virginia Beach
VA168 to NC/VA state line
NC168 to Barco, NC
US158 to Cape Hatteras
NC12 on Cape Hatteras to Ocracoke
Ferry from Ocracoke to Cedar Island
US70 to Morehead City, NC
NC24 to Jacksonville, NC
US17 through Myrtle Beach to Charleston, SC
US17 to I-95 in SE South Carolina
I-95 to Savannah, GA
I-95 (back north) to I-26 in SC
I-26 through Columbia to Asheville, NC
I-40 to US19/US441 through Smoky Nat'l Park
US441 to Knoxville, TN
I-75 to Lexington, KY
I-64 to Louisville
I-65 through Indianapolis to N. Indiana
I-90 back to Madison, WI

Thanks for any info you can provide, especially through email but I will try to keep up with the newsgroups too!

SB DX @ WW $OPDX.281
Ohio/Penn DX Bulletin No. 281

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 281
BID: $OPDX.280
December 2, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2UCK, W2IJ, NG3K, K7WX, KR8V, K9BG, KY0A, DL2HBX, DL5EBE, EA3KU, G4BUE & DX News Sheet, HL2KAT, JA1QGT, JH4RHF, JP1ROA, OH2BH, ON6TT and VE3BW for the following DX information.

3V8BB REPORT (by DL2HBX op). ULI, DL2HBX, would like to thank fellow contesters and DXers for all the CW QSOs during his stay at 3V8BB, between November 21 and 26th. He managed 7500 QSOs out of which 4400 were in the CQWW DX Contest breaking the old Low Power World Record. All QSOs were made using an IC-735, a 3 element tribander at 15m above ground, a delta loop for 40m, a G5RV for 80m and a low dipole for the top band. The sea front QTH and the hill in the back helped all northern directions (EU, USA, JA). QSL via DL2HBX. Please remember that he can only confirm his own QSOs, that is, all CW QSOs between November 21 and 26th, 1996! He hopes to start QSLing in March at the latest and all QSOs will be confirmed 100%.

5X1T NOW QRT BUT PREPARING FOR HEARD ISLAND. Peter, ON6TT, who has been active as 5X1T, has gone QRT as of November 27. Peter reports he made 13,000 QSOs (of which 1,200 were on 80 meters and 1,700 on RTTY) since the end May. During this tour of duty, Peter was also active as 5Z4DU, 5Z4RY and 9U5CW (first satellite, RTTY and 160m QSOs since quite a while ago). During this period, he has managed to blow up 2 amplifiers, 2 power supplies and one computer (Peter, "Long live stable electricity"). Peter will be back in Africa on December 26th, where he will be joining the Heard Island expedition on Reunion Island. The group's callsign on Reunion will be TO0R. QSLs for 5X1T go via ON5NT (any donations included will be forwarded to the Heard Island group).

6Y, JAMAICA. Begin looking for Alan, G3XAQ, starting December 3rd as G3XAQ/6Y5. His operation will be on until December 12th with activity on CW only 160-10 meters using an IC-706 with 100w and dipoles. QSL to his homecall.

7O, YEMEN. The "DX News Sheet" reports a station signing F6EAY/7O was active at 1550z, November 22nd, on 14050 kHz giving his QTH as Sanaa, and saying that although he is an "unofficial station", he was hoping to obtain a licence.

7Q, MALAWI. Chris, W1EH, in Lilongue, has been very active as 7Q7EH on RTTY this past week. Check around 14085 or 21085 kHz +/- 1 or 2 kHz between 1600 and 1000z. QSL via AA9HD.

9J, ZAMBIA. Vlad, ZS6MG, will be here December 1st, and will stay there for 7 days. His possible callsign will be 9J/ZS6MG. Operations will be from about 1700z until late evening (2100z). He will mainly operate on 40 meters CW, but he will try his best to be active on 80 meters as well as 20,15,10 meters. QSL via ZS6MG: Vladimir Karamitrov, P.O. Box 1788, Bramley 2018, Rep. of South Africa.

A625, UNITED ARAB EMIRATES (Attention Prefix Hunters). In celebration of the United Arab Emirate's 25th National Day, Mohamed, A61AM, will be using the special call A625ND. He expects to be active around 0900z on December 2nd for 12 days. The first 4 days of the operation will be from his beach sight in Dibba, Fujeira. The remaining 8 days of the operation will take place from his home QTH in Dubai where Mohamed now has a KT34XA and a linear amp. QSL to KA5TQF.

BV9P, PRATAS ISLAND. The DXNS reports Bolon, BV5AF, President of CTARL and TAMSAT, has plans for an operation in late March 1997.

C21BH BIRTHDAY PARTY OVER (Excerpts from OH2BH press release)! Martti Laine, OH2BH, states he had "a most memorable Birthday Party in the Republic of Nauru". Some 12,000 QSOs were logged during those days of festivities. C21BH also participated in the CQ WW CW Contest with two stations and totalled some 5000 QSOs. While the actual OH2BH birthday party was honored by the presence of all the heavyweights of the Nauru Republic, there were more than 100 persons who sent their greetings by FAX. Among them were the Presidents of the largests IARU societies, such as ARRL, JARL, RSGB and others. C21BH QSL requests will be processed in Finland by OH2BH. Please note that his address has changed. Cards should not be sent to his previous Hong Kong Address. A special event full-color C21BH QSLs will be released in January. QSL to: Martti J. Laine, OH2BH, Nuottaniementie 3D20, 02230 Espoo, FINLAND.... ADDED NOTE: All OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

C6, BAHAMAS. Gary, KR8V, will be active during the ARRL International DX - CW Contest, February 15-16th, 1997, as KR8V/C6A from Treasure Cay, Abaco, Bahamas as a single op entry. Also, he will be active before and after the contest on all bands 10-80 meters, primarily CW. QSL to home call direct or via buro.

E3, ERITRIA. Jun, JH4RHF, reports that Jin, JF1IST, is leaving for E3-land to do a survey for the construction of communication facilities for the UN organization. He already received permits to transmit for both amateur radio and his business. Since he is there on business, his operations

are limited. He should have arrived in Eritria on November 30th, however, as he goes around the border area for the survey, his operation is limited to 20 meters for a while. He will have more time for DXing in about a week (around Decemeber 9th). QSL via JH1AJT. His suggested frequencies are as follows: 1824 (1825 or 1830.5) QSX 1909-1911, 3790-3796 QSX 3800-3805, 7040-7050 7005, 14185 14030, 21295 21030 and satellite activity planned.

HB0, LIECHTENSTEIN. Seiji, JA1QGT, will be active as HB0/HB9LEY from December 14-15th. Operations will be on 80/75/40/30/20/17/15 meters with activity on CW/SSB (mainly operating 80m CW & 30,20,17 meters long path to JA). QSL via JH1BSE. Seiji suggests to check out his HB0 DXpedition Home Page for the latest information and pictures at: http://www.jona.or.jp/~ja1qgt/hb9ley.html

QSL NEWS AND INFO......
Roman, N2UCK, reports that as of November 8th, he will be Sergey Popov's, RN3QO, QSL Manager. QSL via callbook address.

QSL route for JT1BH (Thanks to JP1ROA) is via:
P.O.Box 791, Ulanbator, Mongolia

Effective immediately, the NEW address for the 9th Call Area QSL Bureau in the United States is: NIDXA, PO Box 1450, Woodstock, IL 60098. Mail sent to the OLD address (NIDXA, PO Box 519, Elmhurst, IL 60126) will be forwarded for one year.

EA6IB, recently active in the 1996 CQWW CW Contest (and also for 1995 CQWW CW Contest) can be QSLed to: Fernando Martinez, Box 69, L'Ametlla de Mar 43860, Tarragona, Spain or to EA6FB.

QSLs for V59T for 1994, 1995 and 1996 are as follows:
1994 - W2IJ (ex-WA2FIJ, CBA in California good for last 7 years)
1995 - V51GB (direct or bureau)
1996 - N2AU

SV/A, MT. ATHOS. Monk Apollo, SV2ASP/A, has been active over the past week. Over the holiday (U.S.) weekend, reports show he was on 20 meters CW (14030 kHz between 1345 and 1630z) which is very unusual for him. There have also been reports of him being active on 80 meter SSB (3795-3799 kHz around 0515z). The biggest surprise was reports of him being active on 160 meters (1845 kHz around 0512z). Dominik, DL5EBE, reported that Monk Apollo stated he will try to work as many stations as possible this winter season on top band and that a fixed sked for 80 meters will be on the weekends around 3795 kHz +/- QRM at 1800z.

USI AND IOTA ALERT. Reinhard, DF4TD/AC5FL, will be active from several Florida islands on December 11 through 24. He will concentrate mainly on IOTA for Europe. If you are familiar with Florida (ie- Miami, Orlando and the Keys) and can offer him some "island info" please E-mail Reinhard at: DF4TD@t-online.de

V4, ST. KITTS. Joe, VE3BW, will be operating as V47CA from February 3-17th (1997). Activity will be all bands 160-6 meters, depending on propagation, and mainly on CW. QSL to the homecall VE3BW.

V5/ZS6YG NOW QRTED BUT WILL BE ACTIVE AGAIN. Charlie, KY0A, informed OPDX that he has completed his operation this year as V5/ZS6YG. From his van in Etosha National Park, he made 1632 QSOs, mostly on the WARC bands. Charlie did try to call CQ on both 80 and 160 meters but to no avail. Even by extending the mast under the loading coil to 16 feet, he felt it still acted like a dummy load. He could hear lots of stateside stations including W3LPL, WA3EUL and K0OO on 160 meters and many on 80 meters, but he could never reach them. Europe was bombing in on 160 but again, nobody could hear him. All contacts have been entered into the computer and labels have already been generated. Cards are on order and should be received by next week. Everyone who has requested a card will have theirs by the 10th of December.
Meanwhile, Charlie states to look out for a huge operation in February in 1997. They will be using V5/ZS6YG again but concentrating on the low bands and 10/12 meters. Most of the operating will be on CW. It is not known at this stage if any RTTY will be tried. During the ARRL CW contest they will be using the callsign V59T. QSL this contest only to KY0A. Outside the contest, QSL V5/ZS6YG to KY0A and V5/W8UVZ to W8UVZ.

V6, MICRONESIA. HL1IWD, (Sung Ki, Lee), will be active as V63CT from Pohnpei Island (IOTA OC-010) from December 5-16th. He will work for an eye specialist there during his stay. Activity will be on SSB (3795, 7060, 14260, 21260 kHz). He will also be active on CW from 0400-1200z. His equipment will be a FT-890 with 500w linear amp with his wire dipole antenna set-up on the roof of Harbor View Hotel. He is one of the Korea DX Club (KDXC) members who was active from the Paengnyong-do Island (IOTA AS-122) in 1993. QSL via his new address: Mr. Sung Ki, Lee, 572-278, SungSan-dong, Mapo-ku, Seoul 121-250, Korea.

VK9L, LORD HOWE ISLAND. Tetsu, JE5FLM, and Hide, JR5XPG, of the Kagawa DX Group will be active December 26-30th, as VK9FL and VK9PG, respectively. Activity will be on 80-10 meters and possibly some 160 meters, with operations on CW/SSB and the satellites AO-10 and AO-13. QSL via CBA.

VK0, HEARD ISLAND UPDATE (Excerpts from KK6EK press release). Bob, KK6EK, states: "The Heard Island DXpedition team is in the final stages of preparations. Some of us leave for Europe in less than a month. The team will assemble on Reunion Island around January 1st, and set sail on January 3rd. After a stop at Crozet, we expect to be put ashore on Heard Island around January 12th, and come on the air a day or so later. Baring catastrophe, we should be QRV for a little more than 2 weeks. All the latest news and details about the DXpedition are contained in our web pages: http://www.ccnet.com/~cordell/HI...." ADDED NOTE: All OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

XZ1N OPERATION WRAP-UP new release will be provided to ALL OPDX InterNet Subscribers as an additional bulletin. Meanwhile, the XZ1N team made 23,187 QSOs (CW - 12,612, SSB- 9,936, RTTY - 639). The majority of

contacts were with European (47%) and Japanese (32%) stations, with
North American (15%) stations being worked only during the brief windows
available to them.

QST has run several articles on modifications to these lamps
to eliminate RFI and reduce susceptibility to RF.

My recommendation is to return the lamps to where you bought
them with an explanation as to why you cannot use them.
That is the only way retailers will get the message that
they should not sell this junk.

Hi all,
This is just to let everyone know that the Wireless Institute of Australia (New South Wales [VK2] Division) Web page has been updated, after a period of stasis lasting nearly two months :-)

Also, because of sudden and unexpected change in pricing policy, which would have seen the page costing the WIA over $100 per week, I have moved the page to my own account, while I look for a permanent home for it.

The page is still accessible at http://sydney.dialix.oz.au/~wiansw/, and will be for the foreseeable futre, so no need to change your bookmarks yet, but the official home page address is likely to change in the next few weeks. Access to the WICEN (NSW) page may be disrupted however (sorry Dave, I had to act quickly :-)

All of you who have suggested / requested links to be added to this page should find them there now (please let me know if I've missed any).

We now have a link to home page for the Heard Island DXpedition, which begins next month. I hope to keep news updates posted to the WIA page while the DXpedition is in progress.

2177. New ATV multimedia web page

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-01 00:00:00 UTC
From: forsberg@io-online.com
Message-ID: <32a0ddac.9550462@news.io-online.com>
Source record: 211585

Hello All,

I have just started a new web page covering Amateur TeleVision (ATV) here in Southern CA. Check it out if you have ever been interested in ATV. Included on the page is a 20 second video clip of the new 10.4 GHz FM in, 3.48 GHz FM out ATV repeater activity. Also is a real audio file of one of the ATV nets that occur during the week. Also is a map showing the ATV repeaters in this area. The page can be reached at:

http://web.io-online.com/users/forsberg/atv.htm

If you have any questions let me know. Thanks.

Bruce WB6IZG

That is not correct, Puerto Rico is NOT considered a state. They can
vote because they are american citizens.
This message has no opinion expressed about statehood for Puerto Rico,
only stating a fact.

Gee, so this what ham radio is all about. Sounds just like the bands.
No wonder I sold the shack and took up rock climbing, there's real
humans in the sport. It's really too bad we couldn't sell off the ham
bands to commercial interests and put the money in part towards the
National Parks.

>>for the same reasons that any multitude of practices are -- they're
>>not in the spirit of Amateur Communications and are therefore bad
>>practice.

>Your statement above contridicts with your first paragraph. Only
>the FCC has the authority to "outlaw" closed repeaters.

I guess I wasn't clear enough. My whole point was that the *FCC*
could decide tomorrow to outlaw closed repeaters, just as
they have rewritten the rules in the past.

>Doing such
>would require rewriting of 97.205(e), which I highly doubt would
>ever under any circumstances, happen, ...

The Rule states:

(e) Ancillary functions of a repeater that are available to users on
the input channel are not considered remotely controlled functions of
the station. Limiting the use of a repeater to only certain user
stations is permissible.

So as you can see, the rewriting of 97.205(e) would require little
modification to effectively outlaw closed repeaters. Simply
inset the single word, "not" before the last word in the paragraph.

Part 97 has undergone many more major revisions in the past;
I see no reason to proclaim that *this* paragraph will remain
untouched till the end of time, as you do.

>>Among these practices are transmission of music, transmission of
>>ciphers, transmission on frequencies not allowed by your operator
>>license class, and transmission using excessive power.

>None of which has to do with closed repeaters. Next.

Again, the point was that if the FCC decides that operation of closed
repeaters is bad amateur practice in the same vein that the

above activities are bad practice, they could be gone tomorrow.

>>And, if all else fails, operation of a closed repeater could be
>>outlawed on a strictly arbitrary basis.

>Arbitrary by whom?

The FCC. It could be as arbitrary as the rules restricting the
band edges for Novices.

>>At one point, repeater operation opened up a whole can of worms
>>about the control operator being responsible for all transmissions
>>going through his/her repeater equipment. The FCC resolved all that
>>through one swoop of the pen (i.e. arbitrarilly) with 97.205 (g).

>My understanding of the original thrust behind 97.205(g) was packet radio,
>and station operators being responsible for retransmission of packet
>messages that violate amateur regulations.

>While it may certainly be applicable to voice repeater systems, it
>certainly does not excuse a voice repeater owner from allowing
>garbage on his repeater. To do so is akin to a dog owner having his
>dog plop a huge dog chip on the ground and not clean it up.

But it does excuse the voice repeater from rules violations.
The rule change was a result of autopatch, not packet.

>>It seems that as spectral space becomes more and more of a critical
>>issue, the FCC could quite reasonably put in place the following
>>regulation:
>>
>>97.205 (h) "Closed" repeaters are prohibited.
>>
>>(Or some variation of the above.)

>Doubtful. For one thing, 97.3 does not define a "closed" repeater.

And in 1970, the entire Part had no references to spread spectrum.
or distinctions between amplifiers above and below 144 MHz for
commercial sales. The point is that Part 97 is an evolving document
and that closed repeaters could be here today and gone tomorrow by a
small revision of the rules. 10m kW amplifiers were on the market one
day, and off the market the next in the late 70s.

I have always had great help from alinco! I have 3 alinco VHF radios, and all have worked just fine. I recently called Alinco about a DR110 I bought at a ham fest, and needed parts for, they quickly found the part numbers for me.

As the microphone is probily a full line part stocked by dealers, as an option to some radios, they probily would not sell it to you direct. This would be the same as calling Alinco to order a radio instead of your local dealer. I have orderd from both HRO and AES, and have had nothing but good service from both places.

Burt is one of those sorry individuals that *craves* attention, his
ego needs it for whatever perverse reason and he doesn't differentiate
between accolades or brickbats, as long as it's *attention* of some
form. His mailbox was probably getting few responses and his ego needs
constant attention so he spews forth some of his tired old dogma that
you could say about some people in *any* hobby/pastime that get *too*
involved in the activity. *YAWN* Who hasn't heard (or doesn't know) of
someone who gets too involved in
hunting/fishing/sports/drinking/ham-radio/golf/skirt-chasing/religion/WORK!!
and neglects his wife/family etc. and the person is *so* involved that
their social skills fly out the door also. Hams *certainly* don't have
a patent on that sort of behavior.
Personally I'd *MUCH* rather see a ham at the president's inaguration
ball with a HUGE HT strapped to his belt rather than be approached by
a a dyed-in-the wool Jehovahs Witness or a *NEW* Amway salesman.

2186. effects of hurricanes on communications

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-01 00:00:00 UTC
From: horizons@comm.net
Message-ID: <horizons.44.0087669C@comm.net>
Source record: 211594

Greetings all;

I am currently writing an article for a ARES Internet News Letter on the effects of tidal surge, high winds, tornados and over usage of these systems in the event of a catagory 4 or 5 hurricane striking the US. As I live in New Orleans, I have not experanced a major hurricane sense Camile in 69 and Betsy in 63. Neither of these storms had a direct impact on the city. Even if they had, the types of communications that both civilians and goverment where only a dream or thought in someones mind.

I am looking for any information from those that have been in HAM radio or involved with local or state goverment communications in an area hit by a major storm in the last 10 years or so. I could really use thyeir input in order to make sure what I write is as close to the truth as possible. What I need to know is:

1. How badly where the systems jammed before the storm hit?

2. What was communications like during the storm?

3. How many different types of systems where down after thye storm pasted. ie; Commerical, Goverment and Amateur?

4. How long did it that to get these systems back operational?

5. What form of communications where use after the storm, and before normal communications where restored?

6. What lessons where learned by both those that use VHF, UHF, 800 & 900 trucking and Celluar?

The answers I reveive could help other areas prepare for the possibility of such a storm. As for New Orleans, we really need a wake up call as many of those living here have never been in a severe hurricane ands think fror whatever reason God will protect our city. So, if any of you could help enlighten me as to what occured in your area, I would be most grateful.

Please send all answers to: horizons@comm.net

SUBJECT: FT-51 PROBLEM / QUESTION - HELP!

I have a problem with my FT-51 that I cannot currently figure out --

A couple of nights ago, I left my FT-51 scanning on battery, and I fell asleep. When I woke up, the battery was dead (obviously), and when I hooked it up to some power, I had lost all of my memories. (The CPU seemed to have reset)

When I tried to enter some of my repeaters again, I noticed that the Tx range of my HT had actually been reduced to 144-146 MHz, and 430-440MHz. I have tried resetting the CPU a few times, and I have tried various features on and off (such as extended Rx), but nothing seems to work.

I have been told that it might have somehow become stuck in the European Mode - How do I get my radio back?

Can anyone out here please help me???

Thanks for taking the time to respond!

73,
Bill - KF6CNP

Thanks John. How about between Standard, ICOM and Kenwood? Personally
I rather avoid Kenwood because their basic performance seems to be
rather poor although they are feature rich. I am not sure if this is
the case with the TH-79A(D)? Also, I have little experience with ICOM
HT's so I don't know about their performance. I do know that STANDARD
makes excellent radios. Ergonomically it could use some work but the
electronics is good.

You have an interesting marketing technique -- publicly flaming your potential customers. Are you a graduate of the "Rev." Steve Winter's school of public relations by any chance?

Especially calling him a "boob" for not "knowing" there were 51 states in the USA, with Puerto Rico supposedly being the 51st state.

I use a repeater on 29.68 here in the Sonoma / Lake / Mendocino counties quite regularly!

When the conditions are good however, there are repeaters thruought the U.S. that will boom in!

Trying to argue complex matters with multi-hour, even multi-day lags
between comments is pretty difficult. But anyway ...

If you don't like my dictionary's definition, can you cite from any
adult dictionary of any kind a definition which supports you view
that the word `right' can ONLY (not sometimes but ONLY) be applied to
an inherent inalienable congenital immutable permanent right of a
natural person? Although I understand and sympathise with your
views, they appear to contradict generally accepted English usage.

Since it wouldn't be appropriate for one ham to call another a bonehead in a public place, I won't, but where do you get off pinning this problem on Alinco? In the first place, unless an Alinco mic (or any mic, for that matter) suffered some rare individual component failure (not likely), or suffered physical abuse, like spilling coffee on it, crushing it under foot on your car's floorboard, etc. (more likely), the microphone provided with your radio should have lasted as long as the radio. OK, so maybe someone stole it.

As far as Alinco, the company, is concerned, you will find, if you ask, that many businesses today will not sell anything but repairs directly to their customers, because they have distribution agreements with retail outlets (their distributors) to sell to the end-user, whether it be whole units, or parts. Despite popular belief, this does not make them evil. It just cuts down on their overhead, allowing them to sell their products, through their distributors, to you, at a lower price than their competitors (we forget why we buy a certain radio in the first place...). I've never had any trouble with Alinco, and will happily continue buying Alinco, ICOM, Yaesu, hell - I'd even buy a Kraco if they made a decent radio, but thank the powers above that they don't make amatEUr rigs - I'd hate to have to go to K-Mart for my ham gear. The issue of the service you did (or didn't get) from AES and HRO is something that you should jump on ALINCO about with good reason. but don't fry them because you had to deal with some jerk at the retail level. They don't hire the counter people at AES and HRO.

Also, as a good netiquette point that perhaps I may be initiating here (I haven't seen it pointed out to anyone before), it would be proper, since

you mention posting similar complaint/warning messages on other newsgroups, that you would have written ONE message, and CROSS-POSTED it to the desired newsgroups. That would afford anyone who wishes to reply to that message, either in agreement, or rebuttal, to reply to your posting and have their reply appear strung to your thread IN EVERY NEWSGROUP that you posted to, without having to hunt down your postings. This way, their sincere reply would be shared with everyone that you shared your posting with. Besides, it is a waste of bandwidth and an annoyance to post messages unrelated to the thrust of the newsgroup - remember that some people receive newgroup postings automatically by E-Mail, and are going to wonder what a microphone issue has to do with packet radio. Finally, Alinco has a web site and an E-mail address. I would hope that you afforded them the courtesy of sending them a copy of your message, but the header information shows that you didn't.

>modification to effectively outlaw closed repeaters. Simply
>inset the single word, "not" before the last word in the paragraph.

It sounds that easy, perhaps. But, what are the implications?
The implication is that a repeater trustee would be forced to
accept anyone on his/her repeater. In other words, you would be
forced to allow other people to operate your equipment. That
isn't very likely to happen anytime soon, so don't hedge your
bet on it.

>Part 97 has undergone many more major revisions in the past;
>I see no reason to proclaim that *this* paragraph will remain
>untouched till the end of time, as you do.

Oh the paragraph many not remain untouched, but the meaning
behind 97.205(e) will always be there in some form. Your
equipment is your equipment, and you cannot be forced to
allow someone else to operate it.

Message-ID: <01bbdf8c$335effe0$4b657dc7@ka1fqt.mv.com>
Source record: 211608

10 Meters can be lots of fun! Don't be discouraged by low sunspot cycles or cynical hams. There
are plenty of quality QSO's to be had on 10 meters FM simplex, through repeaters and on the CW, SSB portions of the band. One day I was scanning through the FM portion of 10 and found a couple of guys who were regchewing on a simplex frequency. They met there frequently because there was less crowding interference from other hams such is the case on the local 2 meter repeaters. Also the propagation is better and signals travel longer distances than is the case on 2.

You may also enjoy 6 meters. That band is gaining in popularity and can be just as exciting as 10.
There's lots of new and used gear on the market for a decent price. Some kits are also available.
The cost of getting into 6 is a bit higher but far more rewarding and challenging.

Since you're doing a merry little jig, I suspect that you are afraid
to answer the question, Michael.

Once again, perhaps simpler, certainly with a smaller dance-floor:

"Michael: do you believe that if you chose to order persons with particular
ethnic accents off your repeater, that you would prevail if challenged in
Federal court?"

Part 97 (alone) says you would. But do you believe that to be the case?

Greg

>It seems so many people have forgotten what it means to be a philantropist
>today....

Now this has real value, and cuts straight to a point which I was pondering while attempting to avoid the herds of deer on the way to work today.

And it cuts both ways. Repeater users expect value for money (probably an unreasonable expectation, this is, after all 'amateur radio').

Some repeater owners expect money for the value they provide, at least as an offset.

But look at us all... When you take a look at the service organizations which existed for so long (many of the fraternal) you see a pretty sorry state. All most of them have left are the aged and aging.

We don't really get young people into them, nor have kids since the 70's been raised with the idea of putting back what you take out of society. Somehow we've substituted recycling of glass, aluminum, and newspapers with the idea of recycling old fashioned 'good turns.'

>>Okay. So what's the source, then, of the bickering? Could it be
>>that there are some folks who just like to bicker? Nah...
>
>I wasn't the one who brought up the closed repeater topic.

It's an important topic, one on which we should be able to reach intelligent compromise. It cuts to the heart of our hobby.

>>Well, as long as everybody follows the letter of Part 97, the world
>>will be rosy. Right?
>
>I certainly try to. I would hope that you would too.

Is that enough? I don't think so.

Of late I haven't found much in QST to praise, but December's piece about the Socorro, NM, ham radio club is worth seeing. There's a ringing phrase in there... something like 'we're all hams, first and foremost.'

>>>Such is life in a section of the country where a significant portion
>>>of the population is lucky to have completed high-school.

>>
>>Nope; no 'us and them' here at all.
>
>Nope, just a statement of fact. The capital city in the state had a
>dropout rate of over 60% the last I knew.

Perhaps ham radio could help? Perhaps you can help? I know I found
math to be ruinously difficult and uninteresting until I could apply
it to hard problems that I wanted to solve.

>>So, shut down the machine.
>
>Why inconvenience the dozens of users that do use the machine correctly?
>Fold up and go home because a couple of people ruin it for dozens of

Nothing. But the old machine will now be closed.

>Do you deny that Carl is the King of the No-Code HF license?
>Or, are you objecting to his status as a deity? Around here,
>no-coders are not the threat, its the "Instant Extras" who
>ground their stations to the natural-gas pipes in the houses.

I simply refuse to use 'no-code' as a rhetorical brick-bat. It's
bad for the hobby because it gives no-code-Techs a sense that
we consider them inferior.

>>I'd suggest that on a machine which is 'open' and which is so

>>third factor which causes people not to want to be there.
>
>Yeah, more like out of the 3,000 amateurs in the state maybe 100
>have dual-band radios.

Sounds like your closed machine is an appropriate use of the band
which it is on... ...by virtually anyone's definition. However,
if you want to be philanthropic, perhaps you could advertise it
about to increase the band's occupancy, lest we lose it!

>>But the point is moot, because it sounds like there are plenty
>>of open pairs on the band. So a hard scrutiny isn't required.
>

>The last time I knew there were no more 440 coordinations being
>accepted for the area.

But wait a minute... ...if there are only 100 people with rigs for the band in the state, how is it that all the pairs are used up? Conversely, if there is so much usable repeater band-width, how is it that use of the band is so low (i.e., ~100)? After all, 70cm transceivers are cheap and plentiful.

Greg

I guess, then, that you don't have an intelligent counter-point
to make, Michael. Perhaps you recognize the truth when you see it.

I'm glad to see that you agree that the ability of all hams to
use these bands on a utilitarian basis mitigates towards not
taking them up with private clubs.

Even if it is a truth which you are very obviously afraid of. Even
if it causes you to attempt to belittle those who would make the
point, in some attempt to dissuade them from making it.

>>Nope. Sorry. Start again. That is not the claim. You can continue to
>>argue against it, but it is mere smoke. For it is not the claim.
>
>Maybe you haven't specifically said it, but others have claimed
>that existing, coordinated private/closed repeaters should be
>decoordinated in favor of other "open" repeaters.

As have I, in the limited case where a band is in heavy demand and
is loaded with 'private' machines.

>So the rallying cry "all repeaters must be open" is quite
>appropriate.

No, it is not. Many of us have endorsed the notion of your being
welcome to your private machine. On a band which in your region
is free from crowding.

>>Let me help you: the premise at hand is that, on crowded bands (i.e.,
>>those where an unassigned pair is not available), open repeaters take
>>precedence over (even pre-existing) closed machines. That is all.
>
>And what about machines that were coordinated as private/closed
>machines 10 or 15 years ago before the bands "were crowded"?

They must change with the times. Just like 2m AM 'club' frequencies
moved in the wake of newer band-plans supporting repeaters.

Just like hams who used 'all frequencies above N' bands had to
move off when commercial interests and emerging technology made
VHF and UHF communication viable to the general public.

>
>Is this a real company?

You bet they are. Their foundation was one of the great services to private and sport pilots in the last couple decades. They build reasonably-priced avionic equipment for use in private aviation.

Until they (and another company, Terra) were around, private pilots had to buy radio gear from companies who seemed to conspire to keep prices stratospheric.

I mean, how about $4000 for a 30-watt, frequcncy-synthesized AM transceiver (albeit with a dual receiver deck) which was, in practice, less reliable than a lot of $100 CB radios?

RST did what the said couldn't be done.

>thousands of possible ham's to talk to, but where are they? I scanned
>everything above 50 MHz, but I couldn't find any of them. No wonder we
>might loose these 2 ham bands if there's not much useage.

Actually, every month we are gaining about 4,000 new Techs. That's
significantly more than "dozens", though it may break down to only
dozens per local area. In this area (Atlanta Metro), it is unusual
to find a repeater idle during drive time. Many have more than a dozen
stations per repeater participating in a roundtable or free for all
during these periods.

Now at other times of the day, activity is much lower. So it does
matter when you listen. And I might add that if everyone is listening
to their handheld scanner and isn't using the transmitter that happens
to be included with it, then all any of them is likely to hear is silence.
If you want to stir up activity, you've got to transmit to let people
know you are there.

At most any time of the day or night, I can stir someone out of the
woodwork by announcing my call on one of the more active repeaters,
usually the open 70cm machine with my call sign on it. Often 2 or 3
or more will answer. Everyone was listening, but no one would push the
PTT until I came along and started the ball rolling. Now much as I'd
like to think it is because I'm such a sparkling fellow, the truth
is that they would have talked to *anyone* brave enough to push the
PTT.

That's the trouble with these scanners masquerading as amateur radios,
too many people just use them to scan, and too few take the trouble to
transmit. *Somebody* has to transmit first, it might as well be *you*.

Yes. I placed a posting on this several weeks ago. Before the opening of Gate 2, I noticed (by accident) that WB4QNP was reissued on October 11. I have heard from the local clubs here that several letters were sent to the FCC's Gettysburg office and Legal Affairs.

Noting that he only held the call for several weeks, I guess we can each come to our own conclusion! ;-)

Yes, they do. For some wierd reason they don't say how much in the
front pages of QST. I checked a couple of years ago, and it wasn't
cheap. You can e-mail the ARRL for today's answer.

I decided against it, as I kind of think the option of terminating
my membership as a last resort has some value.

>Sincerely, Steven Hershman "NS1R" E MAIL "HERSHMAN@ix.netcom.com

You shouldn't be mad at Alinco. Like most manufacturers, they don't
sell direct to the public. They sell wholesale-only to distributors
or dealers. Try the same trick with most other manufacturers, call
Georgia Pacific and ask to buy a 2x4, and see how far you get. Now
GP'll sell you a *train load* of 2x4's, but not just one. Not only
are most manufacturers not setup to do retail sales, it usually would
be a violation of the agreements that they have with their dealers
if they did so.

You do have a gripe with the salemen at HRO and AES. It's their
job to take your order for quantity one items. It often is
standard practice to require pre-payment for special order items,
so that isn't a legitimate gripe, but failure to *tell* you that
at the time of accepting the order certainly constitutes a legitimate
gripe. And refusing to even offer to take the order is also a
legitimate gripe.

Now good counter help is hard to find, and some of the salesmen
answering the phones at these places are sleazoids. The management
of these companies would like to know about that so that they can
do something about it. A missed sale is a missed sale, and no
company manager likes that. So instead of boycotting these companies
(where else are you going to go anyway?), call or write the *managers*
of the companies with your specific complaints. Name names, give dates,
etc. Let them know that *they* have a problem, and then *they* can
solve it. If you just walk away, they won't know that there is a
problem. These people *want* your business, and they will follow
up on reasonable complaints.

Both HRO and AES are responsible and responsive companies. They are both generally among the best amateur radio dealers in the US (probably the world). But that doesn't mean every one of their employees is perfect, and even good employees sometimes have a bad day. Give their managements a chance to deal with the problem you had. (Be firm but be nice, consider how *you'd* like to receive a complaint about poor service from *your* company.)

There are a few people working for those companies who read these newsgroups, but just posting a gripe here isn't nearly as effective as writing or calling the right person at those companies with your complaint. You have a responsibility as a customer to do this, both to make your own future purchases more trouble free, and so that other customers can also have better service. Retail requires two active parties working together, and you're one of them.

Morse code is not the same as technical knowledge, it is an encoding scheme, like ASCII.

If you enjoy using it there is nothing wrong with that, but doesn't it smack of the old days of excessive government regulations to force hobbyists who just want to run HF packet or SSTV to learn Morse Code?

I thought the trend was for less government interference in private lives, why are people arguing for more?

It seems clear that the Commission revoked the "earlier"
issuance of W4DX (rumors of an "incorrect" 610V....)

What is of real interest regarding W4DX is the actual time
of assignment by the FCC computer. Is this issuance on 11-26
a result of clearing the Day 1 WIPS? Or, has this call suddenly
become available with Day 2 or later applications?

What EXACTLY was the process by which W4DX was assigned?

The answers regarding the procedures followed in the assignment of
this single callsign would go far in helping to clarify this whole sorry
situation.

Dave, Gary Fiber *is* Icom USA. Believe him. Besides, the HTX202
isn't modeled on the IC2AT. It is more a copy of the look and feel
of the IC02AT. And internally it isn't really even a copy of that
rig (in some ways it is better). It's a Maxon design dressed up to
take Icom accessories. That was a smart marketing decision because
it guaranteed a ready aftermarket of accessories for the rig.

> 73, Eric N9VDC

Like any phone patch, they are considered third party operation, and
must always have a control operator present at a control point. That
control point can be local or remote, but if it is the latter, the
control must be exercised on 222 MHz or above. So if you are going
to act as the control operator, you're going to need more than a
2m radio. For that and other reasons, I'd suggest 2m would be an
inappropriate place to operate a simpatch. Note too that an FCC
employee has issued an opinion (incorrectly I think), that the
simpatch cannot send telemetry that the phone is ringing, so you
are effectively limited to outgoing calls only.

>
[snip]
>1. The ARRL does NOT represent my opinions in the political arena. So
>long as the League supports separate subbands for Morse Code, a
>concentration on contesting and awards, and a VERY ineffective lobbying
>effort, it does NOT represent me.
[snip]

Unfortunately, as you note, the ARRL is all that there is. And they
do claim to represent US amateur radio before the FCC and international
bodies whether you agree to that representation or not. That's the sticking
point, they are listened to as if they *did* speak for you. In fact it
is pretty obvious that the FCC would like to just turn amateur radio
administration over to the ARRL if they could find a legal way to do it.
De facto they already have in many cases.

So if you want to have an impact on amateur policy, you have to make
that impact on the ARRL. And you can't do that very well from the
outside. The ARRL is effectively controlled by a small clique, and it
can be taken over by another small (and activist) clique. But that kind
of coup can only happen if the second clique is on the inside too.

>2. League publications are stodgy, poorly edited, and in some cases,
>technically incorrect. Yes, I've got a Handbook in my library, and I think

>Between the two of them, if editorial competence was gunpowder, they
>wouldn't have enough to blow each other's nose.

Hmmph, that sounds a lot like me talking. I'm also very dissatisfied
with the content, quality, and editorial direction of QST. But as long
as people like you stay outside, they're going to produce articles for
those who are members, IE their core contester and Dxer audience, and
leave any scraps of technical meat to QEX and Communications Quarterly.
(Neither of which have been very good lately either.)

>3. There are those who give the League credit for such things as Oscar,
>moonbounce, repeaters, and the host of "new technology" that has come on
>board in the last 25 years. Sorry, I don't buy it. None of these ideas
>came out of the League. The League simply waited to see which ones would
>prove useful and have widespread acceptance, then embraced them as their
>own.
[snip]

You're correct here. The ARRL and QST have not been leaders in things
which are new or innovative in amateur radio. Their last big attempt
at that was pushing ACSSB and CCW, which was met by a collective yawn.
Innovation has been left to folks like AMSAT, TAPR, etc. The ARRL only
belatedly jumps on the bandwagon after exhausting every effort to fight
the new or progressive idea. The ARRL tends to defend the status quo.
They are almost never pro-active as advocates of modernization, innovation,
or rationalization of the amateur service. But you can't change that from
the outside.

>4. I don't know any way to say this politely, so I'll say it bluntly. The
>ARRL is an old fat white man's organization. I say that as an aging portly
>Caucasian male myself. However, I can also say that there has been
>absolutely no visible effort expended to broaden the leadership in the top
>echelons of the organization. No, I don't believe in quotas. No, I don't
>believe in social engineering. However, somewhere along the line you've
>got to look at the top, secondary, and even the tertiary levels of the
>organization for evidence that we are welcoming all segments of the society
>into the power structure. With one or two minor exceptions, I just don't
>see that.
>
>Of course, the argument can be made that this whole HOBBY/PROFESSION is
>populated by OFWM, and the governing structure is only representative of
>the group as a whole. I can't argue with that, but I will point out that
>unless we make one hell of an effort to get ALL segments of society
>interested in amateur radio that we will not survive long into the next
>millenium. And that would be a shame.

Indeed, the ARRL is largely reflective of the older members of the
amateur service, and those are essentially OFWM who are largely low
band contesters and Dxers. And the OFWM running the ARRL don't know
how to change that (and a good number of them don't *want* to change
that). If you look at the kinds of recruitment efforts they've made,
that's painfully obvious. Pretty much anything that they've tried
which is effective at all just recruits younger copies of themselves.
That is probably because that's all they know how to do, and all
that they think amateur radio is and should be.

The ARRL has serious leadership problems, and because of the ARRL's
power and influence, that means amateur radio has serious leadership
problems. Again, you can't change that from the outside. If you care,
you have to get inside and fight to make things better.

Gary

johngk@iglou.com (John G. Kammlade) shared these priceless pearls of wisdom:

->You failed to mention an alternative organization. Is there one?

I thought I made it fairly clear that there was not. If there was, I would have done a comparison rather than a lamentation. I also would not have mentioned that Greene has failed to produce what he has promised for lo these many years -- an alternative organization.

->Is this a real company?

Has been for 25 years. Where the hell have YOU been?

->^^^^^^Oh come on surely you aren't bragging...Are you??--^^^^^^^^

I'm getting a little tired of having a battle of wits with an unarmed man...

greg@netcom.com (Greg Bullough) shared these priceless pearls of wisdom:

->>>RST Engineering

->>Is this a real company?

->You bet they are. Their foundation was one of the great services to
->private and sport pilots in the last couple decades. They build
->reasonably-priced avionic equipment for use in private aviation.
->RST did what they said couldn't be done.

Gawrsh *blush* thank you. We actually chose the company initials from my old CW days on 40 meters and then named the company Radio Systems Technology and nicknamed it RST. When Radio... wouldn't fit on anybody's computer, we renamed it RST Engineering which also reflected the emphasis on "engineering" and a downplay of "radio" since we were more into audio switching and intercomery. When we bring out the new 760 channel next year, we'll have to think about going back to the old name... {:-)

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign,
if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

Executive Director, North American Center for Emergency Communications

After a large disaster strikes your community and your family, I am
sure you will agree that its a little late to start building a massive
rapid response, emergency communications system supported by thousands
of people within companies, organizations and serving as volunteers to
provide essential support services.

We are the North American Center For Emergency Communications Inc.
(NACEC), a federally-registered non-profit organization serving North
America since 1992. We have been developing a system that merges many
different technologies to create a unique, high-capacity,
rapidly-deployable solution to the problem of communications outages
and shortages that occur following a large disaster. Our volunteer
network in using the Internet as its communications backbone, is
itself using one of the many technologies employed in NACEC's overall
solution.

To help ensure the greatest possible effectiveness in as many
communities as possible throughout North America, we are developing a
very large volunteer network of community volunteers (Community

Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

Since there appears to be no hope that Netcom will ever improve its mailing list services, w1aw-list has been moved to a server down at ARRL headquarters. See Jeff Bauer's entry for more information if you wish to continue to receive W1AW bulletins.

There is no need to unsubscribe from the Netcom list. I'll take care of that myself.

Thanks again for your support and patience with my w1aw-list over the years. Note that this change will not affect any of the other ham-radio related lists at Netcom.

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've

finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tucson Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious

volunteer contributors contacted him at this time.]

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

I dunno. Last time I had to order parts from Yaesu and ICOM they
were more than receptive to taking my VISA card number and fedexing
the item to me.

I would hardly qualify a microphone, especially a disposable mobile
microphone, a "component" like an HF desk mic.

>welcome to your private machine. On a band which in your region
>is free from crowding.

Right. I prefer the "I was here first, you QSY" approach to
frequency management.

Why don't >YOU< go to those "less crowded" bands?

Oh. I know. You want someone else to build the infrastructure,
create demand for radios at that band, and lower the cost for you.
Just like people in So. Cal. did on 440mhz decades ago. Then you
can kick them off in the name of "open repeaters for ALL!"

The last I knew the lifetime membership for the ARRL is set at 25x the
annual dues. Thus, when the dues increase, the lifetime membership fee
increases as well.

The League has convenient payment plans as well for lifetime memberships.
They have one-time, semi-annual, and quarterly payment plans from what
I understand.

The results of the totally unscientific, 9 minute poll on the Ham Radio & More Show on 12-1-96, asking the question, "Are you in favor, in principle, of a no code General License"?, was:
21 FOR
19 AGAINST
40 Total calls taken from many different states in 9 minutes.

Again, just a totally unscientific poll.
73, Len

I have a portable Antenna Analyzer for sale.
It is a portable unit run from NiCad batteries with charger. It uses a LCD 4 digit frequency counter, an analogue SWR / %reflected power scales read direct.
No radio Transmitter needed. It sees exactly what the radio sees.
Only R2495-00. New, under guarantee.
Ideal for the antenna experimenter.

Call Rob @ +27 11 882-9182 (011) 882-9182 South Africa (Johannesburg)

Because the covered material is very relevant to amateur radio.
A stand-along Morse code test is only barely relevant anymore.
All modes should be treated equally.

I'm glad to say that closed repeaters are unknown in the UK. Maybe
that's true throughout Europe.

It sounds like an abomination if the prior presence of closed
repeaters can prevent the commissioning of a new open machine from
gaining immediate frequency-coordinated approval.

Here's a suggestion: Why not continue to allow closed machines, but
with the risk and liability for pre-emption of their channel by an
applicant for an open repeater. Then the closed machine's owners
could choose between yielding the channel to the public open machine,
or themselves deciding to open up their machine and therby retaining
their coordinated allocation?

Clearly and properly, in bands and in locations where there is no
shortage of coordinated frequencies, the ownership of closed
repeaters would be unaffected by such a system. But in other
areas this rule would also ahve the tendency to cause a migration of
closed machines upwards in frequency and into bands which are less
used and more open to assault on account of non-use by other
frequency-starved services.

This proposal must be worth at least 1 cent. Checks and coins
welcome.

Regards,

2249. NO ARRL renewal -- Here's Why

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-02 00:00:00 UTC
From: rmorgan@gte.net
Message-ID: <57vjph$mr1@news2.gte.net>
Source record: 211407

I've been reading the positings about the ARRL, both pro and con in this newsgroup. I've seen this debate going on for years and basically said "ho hum". Then I began to examine my own experiences with the organization and realized the "cons" may have a point. When I put my thoughts down on paper I realized that what I had was more than a vague feeling of unrest about the organization.

Hence, I'm sharing with this newsgroup a letter I recently sent to the president. No, I haven't received a response. No, I don't expect one. Yes, this posting may generate a flame or two but be advised in advance, I wear asbestos underwear.

Rodney J. Stafford, KB6ZV
President
American Radio Relay League, Inc.
225 Main St.
Newington, CT. 06111

Dear President Stafford:

I am in receipt of your letter asking me to renew my membership in the ARRL. The last sentence in your first paragraph says, "I would like to ask you to consider what you can give to Amateur Radio."

I would like to turn that around a bit. I would like to ask you why what I give to Amateur Radio has been consistently and callously ignored by the ARRL while it seems to have no qualms about taking advantage of my good nature.

I refer to the fact that I am the only person in the nation who brings new amateurs into the hobby via classes given on the America On Line computer service. In case you can't figure that out -- I single handedly introduce more newcomers to the hobby (and the ARRL) than most any other single education endeavor anywhere. Does the ARRL care?

Obviously not. I have written a story about what I do for QST and it was rejected. I doubt the rejection was because of my writing abilities -- I am a professional writer and more than 300 publications worldwide have published (and paid for) my work. I think the rejections are based on the fact that I use the Gordon West text instead of the ARRL text in my classes. On the other hand, the ARRL doesn't hesitate to send out my name and phone number to persons inquiring about amateur radio. It's interesting you folks don't hesitate to use me,

but you aren't willing to reciprocate. Oh yes, you won't even list my online course on your Web Page, even though I don't represent any competition.

Come to think of it, if the ARRL was as interested in furthering its membership and in the growth of amateur radio, why didn't the ARRL think about teaching ham radio fundamentals on the Internet instead of letting me do all the work? I suspect if my success catches the eye of an ARRL staffer you will offer such courses, then take credit for inventing the idea.

You also write about "defending amateur radio." When we in the Tampa Bay area were faced with draconian anti-tower ordinances we appealed to the ARRL legal department for help. What you did was send a "model ordinance" to our county commissioners which advocated exactly the ordinance we were fighting. Thus, thanks to the ARRL we had twice the battle to fight. No thanks, I just can't afford any more ARRL help.

And that, President Stafford, is why I must respectfully decline your kind offer to renew my membership at the customary rate and to send me a nifty little lapel pin.

Sincerely,

Arjay Morgan, N3LKZ

Why is that? Should two people holding a private conversation on
HF be forced off-frequency because an "open" net wants to start up
on the same frequency?

>Here's a suggestion: Why not continue to allow closed machines, but
>with the risk and liability for pre-emption of their channel by an
>applicant for an open repeater. Then the closed machine's owners
>could choose between yielding the channel to the public open machine,
>or themselves deciding to open up their machine and therby retaining
>their coordinated allocation?

Two reasons offhand:

1. Frequency coordinators are not empowered by the FCC under Part 97
to make value judgements regarding the acceptability of one repeater's
"openness" versus anothers. A frequency coordinator's job is purely
to reduce inter-repeater interference, as defined in 97.3.

2. What objective criteria is used to determine what is "open" and
"closed". It is my privilege, under 97.205(e), to restrict access
to anyone I so desire. What do you do if I coordinate my machine as
an "open" repeater, and then tell everyone I do not want on it to
stay off? My repeater is "open", and I am merely exercising my
FCC-granted privileges. A frequency coordinator cannot usurp
federal regulations.

>Clearly and properly, in bands and in locations where there is no
>shortage of coordinated frequencies, the ownership of closed
>repeaters would be unaffected by such a system. But in other
>areas this rule would also ahve the tendency to cause a migration of
>closed machines upwards in frequency and into bands which are less
>used and more open to assault on account of non-use by other
>frequency-starved services.

The flip-side is also appropriate. If a band is "full", why not
ask those seeking frequency coordination to move up to a higher
band where there is an abundance of open frequencies?

The reason why, despite what the "I want all repeaters to be open"
crowd tells you, is their real reason is motivated by class

envy. Its akin to the "tax the rich". They merely can't stand the thought of someone having something that they personally cannot access for free. It infuriates them.

Does anyone know if there is any software that will decode (maybe encode)
RTTY via a Sound Blaster?

Thanks in advance,
David - AB2CI

Hi Michael, the key word above is "about". No one would object to having to learn about Morse code. When one learns about RTTY, one is not subjected to threat of force from the feds to be able to decode it "by ear".

I am looking for a mod from the late 1970's on the Kenwood TS-520
receiver and the R-599 (A/D). I believe it was called W6TOG. It
replaced the FETs in the peselector, 1st mixer and 1st LO with
MOSFETs to lower the receivers noise. If anyone has the information to
this most, please E-Mail me this. Many Thanks in advanced

> Sorry you don't agree that the world would be a safer and cheaper place
> without them.
>
> de kg7fu
>
> The anti-gun control groups have a snappy slogan that basically says,
"guns don't cause crime any more than flys cause garbage". Without
debating the validity of that particular statement, I think that it's
unfair to blame lawyers for the state of our society. I'm not suggesting
that I agree with the strange things that go on in the "legal system"
(anyone collecting oxymorons??).
On the positive side of this topic, you might note that the Feds have now
decreed that aircraft manufacturers will only be liable for 18 years
after their product has been sold instead of eternity. Common sense does
prevail eventually.
Another point to consider is that many of these unbelievable judgements
have been rendered by juries!! Has the point been reached where we can
no longer trust the juries??
Our society has serious problems and sleazy lawyers are a symptom, not
the problem itself.
Honest, hardworking lawyers do exist and are a valuable commodity when
someone decides to rain on your parade. And yes, they're not
necessarily cheap, but most will try to keep costs down when they know
you're not well-off.

Yet more lies and useless rhetoric from Zeus.

Zeus knows what the meaning of "unscientific poll" is. Yet, he
tries to conclude facts about the amateur population as a whole
from this "poll" -- a no-no in the research industry.

Hopefully Zeus' RF research isn't as faulty.

Then again, Zeus probably uses the same logic to explain his
hi-tek super-duper whizz-bang rf modes' thruputs and how good
they are.

>
>73 de 9V1ZV Daniel

Let me jump in with my opinions.

Standard is an up and comer in this market. Their radios are pretty good, but could use some human interface work. Icom was *the* amateur standard of excellence for a number of years, making such classic HTs as the IC2AT. They're still good, but lately I don't think that they quite measure up to their previous reputation. Yaesu HTs are also good, with probably the best human interface. Like the others, their IMD performance suffers because they try to be wideband scanners as well as communications radios. No one does that well because the demands are diametrically opposite. But I don't think that they've cut any quality corners, it's just the nature of the beast.

So basically, I like all three manufacturers' products (and I like the Radio Shack HTX202, which is modeled after a classic Icom design, and unlike the current offerings from the others, doesn't compromise performance by trying to be a wideband scanner too).

Now Kenwood, that's a different matter. IMHO they're bottom feeders. They haven't produced a VHF+ radio that I consider suitable for amateur use since the TS-700 (and that radio wasn't so great, it's just that no one else had anything better at the time). Their radios are stuffed with Gameboy features, but lack the solid RF performance you need in a communications radio. Their radios have bad thermal design, IE they overheat much too easily, they rarely meet their published specs for output power or distortion, they have severe IMD problems (aggravated

by too much front end RF gain), and their user interfaces are baroque
at best. Quality control on the newer models also appears to be spotty.

I keep hoping that they'll wake up and produce a decent VHF+ radio
(they've demonstrated they can make a good HF radio), but each new
model keeps proving to be a disappointment. Perhaps if they invested
in some good solid RF engineering, instead of color magazine inserts
and Gameboy frills, they might be able to do something good. But as
long as the suckers (er customers) keep ooohing and aaahing over the
frills, and don't demand good performance, they probably won't.

An excellent argument. Why should I be forced to learn about RTTY
for FM voice privs? Why force me to learn about HF packet when all
I want to do is yack on HF SSB? The list is endless.

>I thought the trend was for less government interference in private
>lives, why are people arguing for more?

Spectrum management is not interference in private lives, unless you
want to count those people who believe it is their right to set up
and operate micro-transmitter FM stations everywhere.

Hey! Clever tag line there Timmy Z!

There is another AZ-EL rotor made by E-Moto. looks much more powerful
and is more expensive than the 5400B. I bought mine used for $425. I
have seen them as low as $350. There is also an elevation only model
that you can use with an existing AZ rotor. The 5400B has an optional
RS232 module that can interface directly. Otherwise, a DIN plug on back
brings out analog voltage cooresponding to position and accepts external
relay closures to run motors. The 5400B is probably your best bet unless
you wish to home brew, that way you can buy some more F.Z CD's with the
money saved and listen to them while soldering your little poots away!

ampr.org IP Coordinator for Arizona subnet (44.124.xxx.xxx)

[Editor's Note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Owner of the Land-Mobile-Radio Mailing List

The purpose of this list is to allow discussion about commercial land-mobile radio equipment, its use and maintenance.

Owner of the Military Affiliate Radio Service (MARS) Members Mailing List.

The purpose of this list is to allow discussion about MARS (Military Affiliated Radio Service) activities. The list is open to all branches of MARS.

To subscribe to or unsubscribe from either of the above lists, please send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either
land-mobile-radio or mars-list. An acknowledgement/welcome message
should follow very shortly.

Moderator of rec.radio.info newsgroup:

news:rec.radio.info

Please direct all rec.radio.info submissions to
rec-radio-info@stat.com and all feedback and administrivia to
rec-radio-request@stat.com.

I am available most days; work from home. I am especially interested in teaching the practical side of ham radio technology. I will help troubleshoot kits, old radios, etc., but will expect the new or prospective ham to pitch in.

Expertise gained from over 40 years of ham radio and almost as many years in broadcast engineering.

Florida's "Unofficial" Automated Position Reporting System (APRS) Coordinator

Florida APRS Mailing List

The address of the list is aprs-fl@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join aprs-fl".

Florida APRS World-Wide Web Page:

http://www.magg.net/~n2czf/aprs.html

I've been active 24 hours a day on HF and VHF APRS since 1993. I've
attempted to make APRS easier for others in the state by doing
presentations at hamfests and club meetings. I formed the aprs-fl
mailing list thru TAPR and maintain the Florida APRS World-Wide Web
Page so that other newcomers can have all the information they need in
one place. I'm employed as a 2-way radio technician and attempt to
make other peoples "junk" radios available to new amateurs. I'm also
interested in 10 GHz and above communications.

76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives with Phil Temples, K9HI (phil@temples.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is available at:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also available:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service Rules and Regulations) at:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/rib/part97.txt

Programs mentioned in QST are in:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:

ftp://ftp.barc.org/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST) on the Talk America Radio Network, now has a World-Wide Web home page:

http://www.barc.org/barc/ham-more/ham-more.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

Ken Gunton WB6QWF

kenny@erinet.com

Microwave Components World-Wide Web Page:

http://www.erinet.com/kenny/microwave.html

It changes from time to time, so stop back often! Don't see the
component you want? Just call, fax your spec, or e-mail and attach
your drawing or spec for a quick quote at BIG savings.

My company, Techlock Distributing, sells RF and microwave components
of many different types. I own the company, and it's a small, one-man
operation. While I don't sell Ham equipment per se, I have sold some
dividers, etc. to hams for their use.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results
are in September 1994 QST, including warranty and customer service
information for most automobile manufacturers (many of whom have
published installation guidelines).

I am also continuing to pursue more formal contacts and
standards-making through the EMR and EMI Standards Committee of the

Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files)
are also available from the ARRL info server. Send E-mail to
info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL
Anonymous FTP Archive and David Newkirk's entry for information about
the ARRL World-Wide Web Home Page.

* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire
group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a
subscription-only list, with $12 US per year as "dues" to support the
list.

With monthly costs for Net access at $350 US/month and telephone line
charges of $50 US plus, we are not getting rich. The fee was set after
much consultation and wrangling, and was designed to cover the costs
of running the list... and hopefully provide a surplus to upgrade the
services we can provide, like better mail delivery, larger archives,
etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't
be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an
Extra class amateur license. I got my first ticket when I was 14 years
old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

http://www.ipass.net/~teara/
http://www.RTPnet.org/~fcarc/

Navy/Marine Corps. (NAVMARCORPS) MARS

(Maine Area of Region ONE)

ampr.org IP Coordinator for Maine subnet (44.118.xxx.xxx)

I can get just about any answer needed for TCP/IP, if I don't know it myself. I have a close friend who will know the answer (he doesn't have E-mail access).

I am more than glad to offer my assistance. Being up here in the "sticks," I remember how difficult it was to find assistance back when I became interested in Amateur Radio.

[Editor's Note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature
phase shift keyed) modem for the amateur satellite channel. This modem
is implemented totally in software running on a PC with an ordinary
(non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB
transceiver bandwidth.

I've made good progress and have put some info up on my web page about
it, including an audio file to show what it sounds like in noise when
the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the
code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting
relatively wide-band digital modes on band occupancy and throughput
(i.e., What gets optimized? Are there tradeoffs in quality vs.
quantity?) in the context of the spread spectrum rules debate, but I
think it needs to be a much wider discussion. See my reply comments to
the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

Michael S. Keller AB5EL

71620.447@compuserve.com

Areas of particular knowledge:

* PC-style computers
* Mobile installations (rearranging mobile HF right now)
* Repeaters (after a fashion--building a 1.25m repeater)

R. D. Keys NA4G

Dept. of Crop Science
NCSU
Raleigh, NC 27695-7620

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset

quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for UNIX jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain
and/or shareware programs, data bfiles, frequency lists, etc., that
would make a useful edition to the QRZ! CDROM. Can help arrange volume
discounts for clubs and groups, and will donate copies of QRZ! to
qualifying non-profit organizations. Send E-mail or call +1 602
483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated
Hospital Disaster Support Communications System (HDSCS) of Orange
County, California have served over 35 hospitals in nearly 50
emergency situations. At the new HDSCS site on the Web, you can find
out how volunteer Amateur Radio operators can be an important backup
communications resource for hospitals, if the hams are well organized

and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

David Newkirk W9VES

webmaster@arrl.org

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their

volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Avid SW/MW DX'er for the last 30+ years

My main area of expertise is low-power (under 1 kW) Latin American Broadcasters, but I keep up-to-date on the current trends and events affecting broadcasters world-wide (i.e., I was recently asked about a station engineer who was working at ELBC in Monrovia, Liberia and was able to pass on information that the engineer was currently working in Gabon.) My other keen interest is Clandestine Broadcasters (not pirates).

Though intentional signal jamming isn't as much of a problem as it was during the "cold war," I co-authored a report titled "THE WOODPECKER PROJECT" which was presented at an ITU convention. I still use those skills now and then to DF CB'ers running illegal power, and your odd "bad-ham."

Bruce Perens K6BP

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

* Volunteer Examiner (W5YI)

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Bill Roth N7RYW

n7ryw@teleport.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by

either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

2277. AEA - Closing it's doors

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-02 00:00:00 UTC
From: "Richard B. Harel" <Richard_Harel@ccm.jer.intel.com>
Message-ID: <32A36583.7D9D@ccm.jer.intel.com>
Source record: 211435

I was very sadenned to hear of the news that AEA closed it's doors on
Nov. 15. I own 2 great AEA products which are the heart of my station
(HamLink and PK-900) and now wonder who I can turn to for customer
support in the future.
AEA made some really great products and it just makes me wonder why
they couldn't succeed ? It was very strange paging through the December
QST and not seeing any AEA product advertised.
I'm now 37 and have been a ham since I'm 16. During that time I've seen
so many US manufacturers go the same way as AEA.
Collins, Hallicrafters, Hammerlund, Clegg, Drake, Wilson, SBE, Heath,
KLM, GLB, Tempo to name a few. Yes, some of these companies still are in
business but they are long out of the Amateur Radio market.
In 1976 when I would used my Wilson 1405 with optional DTMF TT pad
to make a 1/2 duplex call through the local repeater's autopatch, it
was the neatest thing. Non-hams would look on in awe/amazement.
There isn't much technology in my shack these days that would impress
a cell-phone/internet user. Or someone using a Nokia 9000 Cell-Phone
with built in PC ! (They ARE still impressed that our fraternity
in much closer knit than theirs).
So if I can get my Amateur Radio wish answered - what would I wish for ?
Well besides some state-of-the-art gear and a few acres of antenna farm,
I would wish for a breath of new life into Amateur Radio. Like SSB
was in the 1950's - solid state and IC's in the 60's, repeaters in the
70's and Packet Radio/PC in the 80's. We need technology that will be
one step ahead of what Joe-cellular-telephone-net-surfer is using.
It's not impossible either. With our bandwidth on 1.2 Ghz and above,
wireless Internet surfing is possible at very high speeds.
Perhaps Phase 3-D will do it. Maybe ICOM, Kenwood and Yaesu will join
in putting up a string of geostationary satellites with a preprietary
code that will only work with their radios !

73,
Rich

Perhaps an FCC error that will leave the second recipient in tears
from losing both this call and perhaps also his chance for all the
other calls in his Gate 2 list?

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography

(available on request). More information about MACA may be obtained
from:

I'm certainly willing to be an Elmer if there's a need. I hope I've
learned a few things since 1966 when I first went on the air. :-)
Here's a list of subjects I might be able to help with:

* Combining amateur radio and flying
* Antennas
* Civil Air Patrol
* General Operating Practices
* Older (Tube) Equipment
* Test Equipment and Measurements

ampr.org IP Coordinator for Alaska subnet (44.022.xxx.xxx)

I run a JNOS full-service BBS, so if you need help with TCP/IP, I'll
be glad to try to get you started. Any other help with packet radio
will certainly be provided, too.

I can help with most things regarding PC's, but I'm not a programmer.
:-(

[Editor's note: All ampr.org coordinators are listed in the document
at:

ftp://ftp.ucsd.edu/hamradio/amprnets

Flight Test Center, crashing aircraft so you don't have too.
- --

http://red-agnes.la.ca.us/~js/

For hams that are interested and live in my area, they are welcome to
login to IBBS. IBBS is a full-time UNIX-based computer that is
dedicated to ham radio. I carry a full rec.radio.* news feed and
E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be
willing to answer any question a new person to the hobby has. If I
don't know the answer, well, NASA is only two blocks away. :-) I live
and work here at Edwards Air Force Base, CA. I am also very active in
SAREX.

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design
* Fairly broad interest in amateur radio (but not contests!)
* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing
* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

I am a comunications sergeant for the U.S. Army. My particular specialty is tactical HF radio. Our primary means of communication is with 20 Watt manpackable radios with a data burst device.

I have experience with both short and long-haul HF communications and am willing to give whatever (publicly-available) information I can about antenna construction and basic radiowave propagation.

I have experience in tactical (field-expedient) antennas as well as basic radio wave propagation. I also have experience with larger less tactical antennas such as the doublet and NIVIS. Most of the antennas that I deal with are large-half or quarter-wave in length for frequencies ranging from 2 to 29 MHz.

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

HELP
QUIT

Dr. Len Traubman (DDS) W6HJK

ltraubman@igc.apc.org

http://www.igc.org/traubman/

Russian Phrases for Amateur Radio:

http://www.igc.org/traubman/russian.htm

This 20-page syllabus was compiled during the Cold War by W6HJK to help amateurs better communicate with their Soviet colleagues. A 90-minute audio cassette has been added to help with pronunciation. You need not be an expert in Russian, only interested in "trying."

The booklet provides (1) English words and phrases for QSOs, accompanied by (2) the Russian translation and (3) the English transliteration, to assist you in pronouncing the Russian.

The syllabus follows the natural sequence of a QSO. There are additional sections on the Russian alphabet, phonetics, CW characters, numerals, and given women's and men's names. Suggestions are made for addressing mail to the former Soviet Union.

The author undertook this project out of a personal interest in improving the quality of his QSOs with Soviet hams and to enhance USA-USSR relations. A nominal cost of $6 US ($8 US international) for the booklet, and $6 US ($8 US international) for the audio cassette, are payable to the Foundation for Global Community (formerly Beyond War), the original original sponsor of this educational endeavor to build global dialogue and cooperation.

Requests should be sent to:

RUSSIAN PHRASES FOR AMATEUR RADIO

[Editor's Note: It is my intention to keep the Elmers List as comprehensive and useful as possible, representing a broad spectrum of amateur radio activities. To that end, I have tried to make only very minimal content judgements, if at all. Though this organization seems to serve larger political and propaganda goals that I personally may not agree with, I think the amateur-radio-related content, and the useful product being offered, is redeeming enough to include here. As always, criticisms regarding any Elmer's entry may be directed to the Elmer him/herself.]

"Why don't you just make 10 louder?"
(Spinal Tap)
- ---

Having recently discovered the joys of Perl and CGI on the WWW, I
decided to get into the swing of it by coding a WWW page where one can
take practice Amateur Radio Exams. The page is now complete and has
all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by
subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited

equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station

(soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have

the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

2283. Install Alinco 2m in Nissan Sentra?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-02 00:00:00 UTC
From: jjhanso1@students.wisc.edu
Message-ID: <32a22155.22443716@news.doit.wisc.edu>
Source record: 211477

I have a 1996 Nissan Sentra 4dr. I also own an Alinco 2m mobile radio and have purchased an NMO mount 1/4 wave whip for it. I am looking for good installation advice.

On my old car, I drilled the antenna through the center of the car's trunk and it seemed to work okay. A local radio store (that does commercial installations) said that a better route would be to use some sort of clip to the inside of the trunk. Any comments on this?

Also, how should I mount the radio itself? Has anyone come up with a good spot or way to do it? I am looking to minimize the permanent damage to the car, though I understand that some holes will be unavoidable.

Tnx de N9LEA.

: of money.

Right. Check out the dues of any professional society; check the dues of fraternal organizations such as the Elks, Moose, VFW, etc. Plus, we get one of the better ham publications on the market, as well as other services provided by ARRL.

Our club's Board of Directors recently considered an increase in dues from $15 annually to $20. What we discovered was that our dues were much less than many of the surrounding clubs in the area. When we brought the increase to the members at the monthly meeting, not one objected to it.

Not, however, that I always agree with their positions. I went from member to non-member for close to 30 years, because of their support for Incentive Licensing back in the 60s.

: One thing that strikes me as odd is that the survey results

: dues cost.

Well, Ray gets a lot of undeserved flak over these surveys. He doesn't represent them to be statistically valid; they're there to stimulate discussion.

You are correct that those hams with Internet connectivity who participate in this particular survey, does not form a statistically valid sample of the amateur community.

The total number of amateurs in the US is known. The number of "silent keys" is not necessarily know with accuracy. The number of inactive hams is definitely an unknown. Also, inactive does not equate to uninterested.

I have been inactive for many years, with the usual demands of college and career, but have never lost interest in the hobby, and am becoming active (and upgrading to Extra) now.

From what I understand from a fellow club officer who has, seemingly, done the required paperwork to get his repeater coordinated, this is the case.

TASMA seems to have become totally uncommunicative, in this case, even though their own by-laws require a written answer within 60 days.

I was wondering if anyone has ever grabbed their general and advanced in one shot. I am studying for the general, and went ahead and bought the advanced book. Both my general and advanced book are the ARRL books (the black ones) and I thought if I first read the chapter on XXXXX in the general and then read the same chapter in the advanced, then studied those particular questions from each pool, it might not be too hard... almost like taking one big test.

Any thoughts/ideas/comments etc?

And so are certain idiot pager peddlers, apparently. Not only does this guy not know his geography, but his public relations skills are piss-poor, too! If he's not self-employed, I hope his boss sees his rude attitude in dealing with the public. And if he is self-employed, I can safely say he has an IDIOT for a boss!

> > BUT CRITICS ARE ALWAYS UNINFORMED

Um, let me guess. That's a quote from Jim Jones, right?

But, I gotta admit that he's right in one sense. He's a critic and he's certainly uninformed.

That ought to really stump the folks on Jeopardy -- naming the 51st state. "I'll take 'The 51 States' for $200, Alex". Obviously a knowledge of geography is not required to peddle pagers!

So which of the localities listed is the "51st state"? Maybe it's the state that Mike lives in -- "Confusion".

> SINCERELY,
>
> KB2TIU
> MIKE

Apparently knowledge of geography is not a prequisite to get a ham radio license, either.

well, the FCC said something along the lines of "we always have to track the signal down anyway. bootleggers aren't on file and most times there's no identification or wrong identification. therefore, knowing where a station is located doesn't mean a whole lot.", back when they stopped asking for a station location address.

to=20
> never again tell another lawyer joke...I no longer get the humor
> Jim Hutchings VE5HM

Gee, good for you Jim! How much did he charge you?

Don't you ever wonder about the screwball laws being written everyday
to restrict and regulate our laws? Do you think they're written by
Joe Concerned Citizen?

How about the financial impact lawyers have on our everyday lives?
Every time they win some humongous settlement in some pea brained
case it ends up costing the taxpayers and consumers.

Ever look up justice in the dictionary? How about all those crooks and
murders that get off every year due to some "technicality"? Ever hear
of the case of the divorce where the mom was suicidal and mentally
unable to cope without anti-psychotic medication and the father was
"normal"...mom got custody.

The responses you see here are direct reflections of our own experiences
and disdain for lawyers. When one threatedned to sue me, I posted it
so the world could see what they are really like.

Sorry you don't agree that the world would be a safer and cheaper place
without them.

The ratio between the inner and outer counductors will yield you the Zo =
of the line.

Check the ARRL or RSGB handbooks (or other engineering texts) to find =
the formulae.

2304. Audio Companding 72-126 MHz FM Receivers (90db s/n ratio)

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-02 00:00:00 UTC
From: em@mediacity.com
Message-ID: <em-0212960051360001@208.138.21.92>
Source record: 211498
Cross-posted to: rec.radio.amateur.misc,rec.video.cable-tv,rec.ham-radio,rec.radio.amateur.equipment

Studioline COMPANDING FM RECEIVERS with up to 90db audio s/n ratio for Cable
(and other RF Distributed) Audio (VIEW PHOTOS at: http://www.lasermotion.com)

THEY ARE: Three receivers in one box with "F" connector input,
and RCA phono outputs for two channels of audio.
Two receivers are audio channels, and the third receiver
is dedicated to control and programming functions.
The Studioline unit is fully software configurable.

THE PRICE: $ 37+shipping/each Receiver.
$185 / 5 units, we pay shipping
$ 15 (US postage paid) for schematics
(Original Large Quantity Manufacturing Cost in Japan = $321 /each)

THE STORY:

Studioline technology for economically distributing truly studio-quality audio
programming over existing Cable & Wireless broadcast systems was
originally developed by FM Systems, Inc.., Santa Ana, CA. with funding
provided by The Chronicle broadcasting company in San Francisco, CA. We
acquired the equipment and rights. Pricing is very affordable. Subscriber
Receivers Are Now Available by FedEx next-day shipment from Hayward, CA.
Head End transmitters are available
inexpensively from FM Systems, Inc., Santa Ana, CA.

*** COMMERCIAL APPLICATION EXAMPLE: ***

PUBLIC CABLE AUDIO APPLICATION:

COSTS: Estimated to be less than 25% of the cost of Digital Music Express
(DMX).
We offer financing, and maintain an inventory of exchange and
installable
units at your facility.
HEAD END: (Photo)
FM Systems, Inc. Transmitters: Each 19" rack chassis of
3 Stereo Channels is $4750.
SUBSCRIBER END:
Studioline Receivers: $37/ea. purchase, or $3.91 per month rental.
BREAK-EVEN POINT:
As few as 200 installed units at a monthly fee of only $5.95 per subscriber.

*** RF CARRIER SPECIFICATIONS: ***
Frequencies: 72- 76 MHz = 9 Stereo Pairs.
108-126 MHz = 60 Stereo Pairs.
Bandwidth: 300 KHz per stereo pair.

Level on cable: -15 dB to -25 dB/video.
Negligible cable system loading. (!)

*** AUDIO SPECIFICATIONS: ***
Signal to Noise Ratio: As high as 90 dB.
YES - That is NOT a misprint !!
(80 dB audio demonstrated at 35 dB RF carrier/noise ratio!)
Designer tells of "Excellent Audio Signal decoded
on a terrible (!) system WITH 65 AMPLIFIERS IN SERIES !
The signal was OTHERWISE USELESSLY NOISY but Studioline recovered it".
Frequency Response: 15 Hz - 20 KHz, ±1.5 dB.
Harmonic Distortion: Typically < 1%.
Stereo Separation: 70 dB, 20-20 kHz.
(There are two completely separate
high sensitivity audio FM receivers,
each with a low-noise Compander Section)
Audio Output: 1 Volt, low impedence
Ready to plug into "aux" or "tuner"
inputs of customers' existing premium stereo systems.

*** PROGRAM SOURCES: ***
Many special interest audio programs from satellite.
Numerous ethnic language broadcasts..
Music for any taste, education, and local live entertainment,
concerts, symphony and events.

*** OPERATING, and OTHER FEATURES: ***
These are completely software driven,
flexible devices,all programmable from the cable "head end".
The design team is available for consultation or for
modification of the design.
With "flag" signals on distribution cable,can utomatically sense
channel TV is tuned to, for true studio sound to accompany video.

Very high quality, and attractive looking receivers
Manufactured in Japan.

14" Wide x 10" Deep x 3.5" High. 7.5 lbs. 105-125VAC. 25 Watts.
Unique frequencies and modulation technology make for
theft-proof and secure channels.
Addressable and authorizable from head end over cable
by individual channel and unit serial number.

*** APPLICATIONS: ***
PRIVATE CABLE:
in HOTELS, RESORTS & SPAS.
PUBLIC CABLE:
Enhanced and premium cable service and
pay-per-view movies.
Precisely targeted outlets such as Muzak franchises,
Hotels, Discotheques, and Lounges.
Live broadcasts of entertainment, symphony and special events.

Any time the special presence of studio-quality sound!
(Or two completely separate audio channels)
can make a difference to your performance and your subscribers.
THEATRE MANAGEMENT:
Distribution of up to 60 separate channels of sound
FACTORY ENVIRONMENTS:
Broadcast and directed paging.
BACKGROUND MUSIC SERVICES:
High quality sound for a change
PUBLIC INSTITUTIONS
Simultaneous Translation Services in Senates Parlaments and other groups.
This is a bargain and will not wait long !

+ old, thanks to my Elmer who is now a silent key.
+
+ I am an instructor for amateur radio classes, Novice through General,
+ and teach CW at least once per year. I am also the VE team liaison for
+ the TEARA VE team, and test monthly in Smithfield, NC.
+
+ I maintain a number of repeaters from 10 meters through 900 MHz
+ including ATV. I build a lot, and enjoy restoration/construction of
+ vacuum tube amateur gear.
+
+ I enjoy ragchewing and DXing, with about 75% of my operating time on
+ HF spent on CW. I also enjoy weak signal and FM operation on 6, 2,
+ 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.
+
+ I maintain a number of sites, some of which are related to amateur
+ radio. The URLs are:

Civil Air Patrol

- - Co-Host - Ham Radio and More
- -
- - Ham Radio and More is available for free to any AM station that is
- - willing to run it with national ads intact. If you want there to be a
- - nationwide amateur radio talk show, call your local station and ask

- - them to get the program. They don't have to be part of the Talk
- - America network. They can call KFNN in Phoenix (+1 602 241-1510) or
- - Talk America at +1 508 460-0588.
- -
- - Effective 4/7/96: WWCR shortwave will air the show LIVE each Sunday at
- - 6:00pm ET, (2200 UTC) on 7.435 MHz AND 12.160 MHz. Also, tape delayed
- - at 5:00am ET (0900 UTC) Mondays on 3.315 MHz and Saturdays at noon ET
- - (1600 UTC) on 12.160 MHz.
- -
- - Call in and be part of the show. The toll free number is +1 800
- - 293-5366 and outside the country at +1 602 230-2755. Fax at +1 602
- - 241-1540.
- -
- - See the entry for Cheyenne Greatorex for the Ham Radio and More
- - World-Wide Web Page.

+ * VHF
+ * Volunteer Examiner (W5YI)
+
+ I suspect that I would be classified as a "classic" amateur operator.
+ While not a proficient homebrewer/RF designer (yet), I pride myself on
+ the ability to construct equipment from kits, as well as being able to
+ competently debug and fix the equipment I use - this is a set of
+ skills that is becoming too rare in our "appliance operator" world.
+
+ While many see a need to run high power and large antennas, I do not.
+ I live in a development with antenna restrictions, and I choose to not
+ expose my family and neighbors to high RF fields.
+
+ This has led to my love of QRP (low power) operation. Working from the

+ eastern U.S. into Germany at 100 Watts is pretty neat - but to do so
+ on 1/2 Watt? A flashlight uses more than that, and it's being seen
+ some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!
+
+ I also enjoy an occasional contest, although I am more relaxed about
+ operating than the annual "winners." I always operate on Field Day
+ with fervor, last year assisting the University of Maryland in making
+ 205 QSO's (most of them CW) at 4 Watts of output power into wire
+ antennas.
+
+ I greatly prefer CW over phone. I can frequently be found on 2m
+ repeaters during trips and the drive to and from work.
+
+ I have confirmation of contact with 138 countries and have earned my
+ WAS and WAC awards. I have been a Volunteer Examiner since age 18, and
+ a ham since age 15.
+
+ I get a great deal of joy from watching others learn something new,
+ and then embrace it as their own. Ham radio is a wonderful way to
+ become involved in public service and a great, technical, hands-on
+ hobby that can lead to careers and a lifetime of enjoyment. I find
+ great pleasure in making others aware of it.

2307. W4DX Vanity call

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-02 00:00:00 UTC
From: Reynolds <reynolds@capital.net>
Message-ID: <01bbe046$90df33a0$2fab61cc@ns.capital.net>
Source record: 211501

Did anyone note that W4DX was assigned just prior to Sept 23
Gate 2 opening and has been assigned to another under Gate
2 on Nov 26.

What could be the reason for the change?

Paul, W2CW

2308. Help??fuel pump noise in radio

Does anyone else see this response as extremely unusual?

What's the fun of listening to computer-generated code when you can instead
get on the Novice frequencies and actually carry on a (CW) conversation
with a live human being hundreds or thousands of miles away?

Novice Class HF CW frequencies:
80m: 3700-3750 kHz
40m: 7100-7150 kHz
15m: 21.1-21.2 MHz
10m: 28.1-28.5 MHz

From: jbl@levin.mv.com
Message-ID: <32a6d378.124008621@news-lnh.mv.net>
Source record: 211504

In <57u7sm$5cu@news.Hawaii.Edu>,
jherman@Hawaii.Edu (Jeffrey Herman) wrote:
|What's the fun of listening to computer-generated code when you can instead
|get on the Novice frequencies and actually carry on a (CW) conversation
|with a live human being hundreds or thousands of miles away?

Also, somehow, I found using CW on the air improved my code much more quickly than using tapes or computer programs, both of which seemed extremely boring and hard to stick to for five minutes straight. (ARRL CW practice broadcasts were an exception, maybe because it meant sitting by the radio and listening.)

|Novice Class HF CW frequencies:
|80m: 3700-3750 kHz
|40m: 7100-7150 kHz
|15m: 21.1-21.2 MHz
|10m: 28.1-28.5 MHz

Technically (i.e. legally) true, but CW is usually confined to 28.1 - 28.3. Novices and tech+ are permitted to use 28.3 - 28.5 for SSB also, so CW is generally kept below 28.3.

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

[Special Note: Greater Omaha Public Access Unix has been acquired by Novia Internetworking as of September 1, 1996. Novia will assume ownership of the gonix.com domain and intends to keep it active (aliased to novia.net) for the foreseeable future. This means that you may use either the new novia.net addresses, listed below, or the old gonix.com addresses for the Amateur Radio Elmers Resource Directory. I'd like to thank the administrators of Gonix for their outstanding support of this resource over the years, and look forward to a fruitful relationship with Novia Internetworking for some time to come.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line

documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM."

As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 5 or 6:

1. World-Wide Web (WWW): This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:
+ http://www.novia.net/~pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *
(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)
see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)
2. Usenet News: This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:
+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers
on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

3. Anonymous FTP: If your site is directly connected to the Internet,
you may retrieve the latest copy via File Transfer Protocol (FTP)
from the following sites:
+ ftp://ftp.novia.net/customers/pschleck/elmers/
+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/
4. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:
+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/
see also news:comp.infosystems.gopher
5. Mailing-List: Since the list is cross-posted to rec.radio.info,
the latest copy may be obtained from the mailing-list gateway for
that newsgroup (along with many other informational articles about
radio) when it is published each month. To subscribe, send E-mail
to:
listserv@ucsd.edu
and in the BODY (not the Subject) of the message, write:

subscribe radio-info
The server may not be able to determine your return address. In
that case write:

subscribe radio-info (your E-mail address)
You should get an acknowledgement very shortly.
6. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send
E-mail to:
ftpmail@ftp.novia.net
and in the BODY (not the Subject) of the message, write:

open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/diff

Alternatively, send E-mail to:
mail-server@rtfm.mit.edu
and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject

```
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

--

* Boccardi (Field Day)
* Brooks (Mobile)
* Butler (Field Day)
* Carruth (FM and HT's)
* Caserta (Portable)
* Chahine
* Cieslak, B (Field Day, Category 2A)
* Cieslak, C
* Czaikowski (Mobile and Field Day)
* Dean
* Eisenberg (Mobile)
* Estes (Bicycle HF)
* Gray
* Hare (RFI issues)
* Hill (including MF, HF)
* Hockaday (Mobile)
* Humphries
* Ihry
* Job (Maritime Mobile Service Net)
* Johnston (Field Day)
* Keller (HF)
* Morris (Portable)
* Redding, J (Portable)
* Rosenfeld (Field Day and Portable)
* Salyzyn (HF CW)
* Shelton, J (Field Day)
* Smith (Mobile and Portable)
* Sohl, R (Mobile/Portable/Field Day)
* Stiegler (Manager, Maritime Mobile Service Net)
* Thornton (Tactical/Field Expedient Short and Long-Haul HF)

NATIONAL TRAFFIC SYSTEM (NTS)

* Boccardi
* Butler
* Czaikowski
* Elmore
* Goldstein (NCS FL Net, Packet)
* Neeson (Eastern Canada, Digital Modes)
* Salyzyn (Canada)
* Zurn (Europe)

NEW ZEALAND ASSOCIATION OF RADIO TRANSMITTERS (NZART)

* Andrews, D (Frequency Management and Technical Advisory Group Chair)
* Davis (WWW Page)

NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS (NACEC)

* Addy (Executive Director and WWW Page)

NOVICE/TECH INSTRUCTION

* Adams, I
* Anthony
* Avnet (Fountain Valley, CA Instructor)
* Ayers
* Been
* Bellville (K-12 Educator and Consultant)
* Bono (AutoExam/AutoCW)
* Budd
* Choate (AC/DC Theory, "Big Picture")
* Cieslak, C
* Czaikowski
* Dean (York - Ontario, Canada - Region Amateur Radio Club Instructor)
* Deutschmann
* DeWolf (Ottowa Valley, Canada Instructor)
* Dworkin
* Galazka
* Glago (Public Service for Beginning Amateurs)
* Gray
* Hill (CW Learning Hints)
* Hockaday (CW and Novice through General)
* Ihry
* Lacy (NuTest and NuMorse Ham Training Software for Windows)
* Larson
* Madsen, et al
* Maia (W5YI Group Education Division)
* Mills
* Morris
* Muenzler
* Myers (including Basic Electronics and Communications Theory)

* Neff
* Paperman
* Redding, J
* Redding, T
* Reeves
* Rosenfeld
* Smith
* Sohl, R
* Stader
* Twigger (Amateur Radio Exam Practice WWW Page)

PACKET AND DIGITAL NETWORKING

* Ackermann (including TCP/IP, TAPR, Net-SIG, and Kantronics D4-10 19.2kBaud Radio Modems, Joint IP Coordinator for Ohio Subnet)
* Andrews, M
* Angus (TCP/IP, NOS, UUPC, Tnet, and SNEWS, SCO Xenix, Windows 95, IP Coordinator for CA - LA County Subnet)
* Bellville (including Rose)
* Bloom (ARRL CNC Contact)
* Boccardi (including APRS)
* Buelow (TAPR BBSSIG User Education Working Group)
* Butler
* Caserta
* Cieslak, C
* Coffman (GRAPES 56 kBaud Radio Modems)
* Cole (TCP/IP and NOS)
* Cox (including MARS)
* Coyle
* Czaikowski
* Dawson (Linux HAM and AX.25 HOWTO's, IP Coordinator for Sydney, Australia, Internet Gateways)
* Dean
* Deutschmann
* Dodell (IP Coordinator for AZ Subnet)
* Duba (Philippines)
* DuBois (including OSI, Protocol Development, Internetworking, and Standards)
* Elmers
* Fracchia (Argentina)
* Garcia (Florida APRS, including Mailing List and WWW Page)
* Goldstein (TAPR TNC-2 Firmware, Packet Radio and TAPR WWW Server)
* Graham (KAMterm)
* Gray
* Huntting (KaWin WWW Page)
* Ingerson (TCP/IP, IP Coordinator for Maine Subnet)
* Johnson, C
* Karn (SQPSK Software Modem for Amateur Satellites)
* Lachacz (National Weather Service Forecast Gateway)
* Leadmon (IP Coordinator for MD Subnet)
* Lee (Korea)

* Leynes (TCP/IP)
* Madsen, et al (Iowa State Elmers)
* Mann (Wearable Computing using GRAPES 56 kBaud Radio Modems)
* Meredith (AZ VHF/UHF Digital Coordinator, F6FBB Packet BBS Mailing List and Support BBS)
* Miller (Ventura County, CA ARES Area 6 Packet Radio Training Group and WWW Page)
* Mills
* Neeson
* Nerenberg (TCP/IP)
* Nielsen (TAPR)
* Redding, J
* Reynolds (TCP/IP over HF)
* Richardson
* Salyzyn (Canadian)
* Sayer (VHF)
* Schleck (MACA)
* Seney (Macnet)
* Short (BitBucket Specialized Techniques Mailing List)
* Smith
* Sproul, K (APRS)
* Sproul, M (APRS, including WWW Page)
* Stader (TCP/IP and Macintosh)
* Stannard (TCP/IP, JNOS, IP Coordinator for AK subnet)
* Vail (TCP/IP, TAPR/9600)
* Watters

PART-15 BROADCASTING

* Brooks
* Browne
* Eisenberg
* Leopard
* Ornitz

POWER SUPPLIES

* Adams, I
* Ayers
* Butler
* Cieslak, C
* Dean
* Gray
* Ihry
* Morris
* Muenzler
* Myers
* Sefranek
* Sohl, R

PRODUCT INFO/FEEDBACK

* Bono (AutoExam, AutoCW, et al)
* Coffman (GRAPES 56 kBaud Radio Modems)
* Colwell (Advanced Computer Controls and Link Communications Repeater Controllers Mailing Lists)

REPEATERS

* Adams, I
* Avnet (Building and Maintaining)

* Ayers
* Bellville (2m/6m/440)
* Bernstein
* Butler
* Cieslak, C
* Colwell (Advanced Computer Controls and Link Communications Repeater Controllers Mailing Lists)
* DePolo (VHF/UHF Design and Construction, Database Manager - EPA/SNJ Repeater Coordination Council)
* DeWolf (Repeater Linking, St. Lawrence Valley Repeater Council Frequency Coordinator, Past President of the Champlain Regional Repeater Association)
* Garcia
* Gilbert (State Frequency Coordinator, TX VHF-FM Society)
* Gray
* Halle (AZ Repeater Association)
* Hockaday (10 meters through 900 Mhz, including ATV)
* Ihry
* Keller (220 Mhz)
* Killebrew (VHF and UHF)
* Madsen, et al
* Mills
* Phillips
* Redding, J
* Rose (AZ Repeater Association)
* Sefranek (Building and Maintaining)
* Smith
* Sohl, R
* Wilkins (including UHF)
* Witte (VHF and UHF)

SAFETY

* Boccardi (Electrical/Grounding)
* Hare (RF Exposure Regulations)
* Ornitz (Chemicals and Toxic Materials)
* Paperman (RF)
* Turner (Software)
* Varanelli (ELF, EMF, and RF Radiation)

SATELLITES/ORBITAL SATELLITE CARRYING AMATEUR RADIO (OSCAR)/SHUTTLE AMATEUR RADIO EXPERIMENT (SAREX)

* Bauer, F (OSCAR, AMSAT VP for Manned Space Activities, Chief Member of SAREX Working Group, NASA/SAREX WWW Page)
* Bertolino (RadioSputniks and DOVE Telemetry)
* D Alessio (Branson School SAREX Project Coordinator)
* Estes (Mostly Analog, Some Digital, and SAREX)
* Galazka
* Gilbert
* Karn (SQPSK Software Modem)

* Lee (Korea)
* Marchant (OSCAR, SAREX School Group Technical Mentor)
* Morris
* Roth (Portland, OR Area AMSAT Coordinator, All Modes including AO-13 Mode S and Weather Satellites)
* Stillinger
* Vekinis (Picosat System and WWW Page)
* Williamson, P (InstantTrack, OrbitDRV, AMSAT Services)

SCOUTING

* Ammar
* Cieslak, B (Radio Merit Badge Advisor)
* Goldberg (ScoutRadio WWW Page)
* Halle (Explorer Post Advisor)
* Ihry
* Muenzler
* Sohl, B (Radio Merit Badge Counselor)

SEARCH FOR EXTRATERRESTRIAL INTELLIGENCE (SETI)

* Bernstein
* Shuch (SETI League Executive Director and WWW Page)
* Smit (WWW Page)

SEMINARS/LECTURES

* Ayers
* Boccardi
* Dean
* Garcia (Florida APRS)
* Humphries
* Paperman (EMI/RFI)
* Redding, T
* Sohl, B
* Sussman (Speaker and Host of PACTOR Forum at Dayton Hamvention)
* Watters

SPREAD SPECTRUM

* Bible (WWW Page)
* Brooks
* Karn

TELEVISION, FAST-SCAN (ATV)

* Dean
* Galazka
* Hammill
* Hockaday
* Larson
* Pawson (British Amateur Television Club WWW Page)
* Phillips

* Ruh (ATV Quarterly)
* Short (BitBucket Specialized Techniques Mailing List)
* Sohl, R
* Veres (UHF and 2.5 GHz ITFS TV)

TELEVISION, SLOW-SCAN (SSTV)

* Bernstein
* Cieslak, C
* Dean
* Galazka
* Johnson, C
* Langner (including WWW Page)
* Short (BitBucket Specialized Techniques Mailing List)
* Sohl, R

TOWERS

* Avnet (and Grounding Systems)
* Hockaday
* Ihry
* Sohl, R

TUCSON AMATEUR PACKET RADIO (TAPR)

* Ackermann (Net-SIG and Mailing List)
* Bernstein
* Bible (Spread Spectrum WWW Page)
* Buelow (BBSSIG)
* Garcia (Florida APRS Mailing List)
* Goldstein (WWW Page, TNC-2 Firmware)
* Lee (Korea)
* Nielsen (File Server and E-mail Contact)

UNIX

* Angus (including SCO Xenix TCP/IP and Sendmail)
* Bernstein
* Buydens
* Carruth (System Administration, Phoenix, AZ Linux Users Group)
* Caserta (Linux)
* Cole (including Linux)
* Dawson (Linux HAM and AX.25 HOWTO's)
* DuBois (SysV Kernel, Applications, Device Drivers, and Networking)
* Ehrlich
* Killebrew (including Linux and TNOS)
* Nerenberg (especially System Administration, Networking, and
Electronic Mail)
* Perens (Linux for Hams CDROM)
* Redding, J
* Salyzyn (including NeXTSTEP)
* Sayer (especially SunOS)

VERY HIGH FREQUENCY (VHF)/ULTRA HIGH FREQUENCY (UHF)

* Ammar
* Avnet (VHF/UHF and Repeaters)
* Ayers
* Bellville (2m/6m/440 AM/FM/SSB/Packet/QRP/Repeaters)
* Bernstein
* Brooks
* Butler
* Caserta (VHF)
* Cook (EME and Weak Signal, including WWW Page)
* Coyle
* DePolo (VHF/UHF Repeaters, Weak Signal, and Contesting)

Bonjour from Bordeaux France.
To repare a
AILTECH Synthesized Signal Generator reference 380KII,
I am looking for either a mauual or a copy, for the main frame (Power supply problem).
I have the manual for the plug in, ref P3602 OE1 183, but I also need the manual for the fm modulator option.
Many thanks if you can help me.
Roland,F6ANF.

> Destructive Testing Systems | we break it. | with previous uucp addresses
> 534 Shannon Way | Guaranteed! | Email to ke4zv@radio.org
> Lawrenceville, GA 30244 | |The GE MASTR II that I have has a complete oscillator in the
channel
element. I have found that you can modulate the compensaion circuit in
the channel element and get very good performance up to 9600. Several
years ago I built a small unit using the exciter section of a MASTR II.
The results were very good past 9600. The only draw back is that the
compensation line is very sensitive and requires a very stable DC level
to maintain the frequency. The unit that I built biased the compensation
line at approximately 5 volts DC +/- 1 mV. The " 5 volts was adjusted
to give the best modulation balance. If you need the temperature
compensation as well you will have to sum in the TC to the DC bias.

I have a portable Antenna Analyzer for sale.
It is a portable unit run from NiCad batteries
with charger. It uses a LCD 4 digit frequency
counter, an analogue SWR / %reflected power scales
read direct. No radio Transmitter needed. It sees
exactly what the radio sees.
Only R2495-00. New, 1 year guarantee.
Ideal for the antenna experimenter.

Call Rob @ +27 11 882-9182 Fax +27 11 882-1122

HTX-202 Owners:
Open up 73, QST and/or CQ and look for adds offerring NiMHD
batteries. Then look for the ICOM replacement for BP8. Then
doublecheck with that vendor that it works with the HTX202. This
has worked for me all but one time. I got one battery at a convention
that had to be reworked a little to make a good connection with the
buttons on the bottom of the radio.

On the 560.....you dont it is a piece of SHIT! If it is the 580 you are talking about then say so.

2327. No Code/No Phone/All Digital HF License?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-03 00:00:00 UTC
From: n4jvp@ix.netcom.com
Message-ID: <32a4b5b1.13481254@nntp.netcruiser>
Source record: 211221
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The code/no-code debate is truly disappointing. It has degenerated into playground-type name calling by certain parties on both sides. I am just waiting to hear "My father can beat up your father." I do wish these child-like antics would be taken to E-mail, the "fuck you"s and "blow me"s show a totally lack of social skills. Nuf said.

Back in the early sixties I was big into SWLing and was able to listen people in California and France talking to each other on 75 mtr AM. Wow that was cool! I wanted to get involved in ham radio, the idea of being able to communicate with others all over the world was truly appealing. At that time I didn't like the idea of having to learn Morse code, I didn't think it was needed. There were all kinds of other ways to communicate that made a lot more sense then listening to all those beeps.

I went to ham club and started learning the theory. My interest was such that I even spent my summer earnings to buy a transmitter and a receiver. A lot of time was spent listening to that HR-10 but next to none was spent in the CW segments. Because I never applied myself to learning that blasted Morse code the Eico 720/HR-10 ended up in the back of my closet for several years.

Later when I went to college one of my fraternity brothers was a ham. Dale, AF1T/ex-WA1FSZ, elmered myself and three other brothers into the world of amateur radio. I had a leg up on the others as I had been exposed to the theory and even remembered a few letters in Morse. Within a few months we all became proficient enough with the code and theory to pass the exam thanks to Dale's patience in teaching us.

Six or seven years of bitching and moaning about the code requirement didn't help me get my license, but a few months of applying myself sure did. Yeah and I missed a sunspot cycle peak too!

I have some doubts as to the validity of the code requirement but none of the no-code arguments amplify that concern. Some argue that the code requirement is keeping many bright and talented people out of the hobby. This might be true as it kept me out for several years until I put forth the effort to learn the code (not that I consider myself bright and talented in the field of electronics). Nobody is ever born bright and talented in any field (idiot savants excluded), effort and application are required.

If the code requirement is dropped why even bother giving the theory tests to these bright and talented types. Present a BSEE to the FCC and get a general class no-code license. A MSEE would be good for a

similar advanced or perhaps even an extra. Just cut out all the BS out that keeps these individuals out of the hobby.

All these bright and talented people will supposedly spawn all kinds of new modes and hardware because they can experiment on the amateur frequencies. Wow that will be neat! I can't wait to see all the new, more efficient designs that will result. Perhaps this is why some fear that commercial interests will take over our HF allocations, technology is stagnating because these frequencies are not being used the way the bright and talented think they should be.

I doubt it. A no-code general will not swell the ranks with talented types nor will it provide a wealth of new technologies, the no-code tech has shown this.

An argument has been put forth that the code requirement is just a rite of initiation. Hmmm, it used to be that to get a extra class ticket at least one years worth of on-the-air experience was required (at least holding a lower class license). Was that hazing or did it allow the newbie a chance to learn the rules of the road through practical experience? Now it is possible to become an extra without ever even turning on a radio, maybe that's good, maybe it's not. But learning CW is not hazing.

CW is out-dated is another argument. Commercial interests are phasing out the use of Morse code so it is out-dated. Commercial interests still use AM in a big way, so perhaps we should scrap the high priced SSB riceboxes and dig out those old DX-40s etc. Bad idea, lets build new AM gear using SMT and MMICs. Why does it matter what the commercial interests are using unless the hobby becomes professional-amateur radio?

I have said before that it doesn't sound right that a ham should be unable to operate a most basic transmitter to communicate. I was very suprised when several extremely knowledgeable people said that FSK could be used instead of CW. I have a Tuna-Tin 2 transmitter and I would like to know how a simple Pierce oscillator that functions as a CW transmitter can be used for FSK without any modifications to make it more complex. What am I missing?

Amateur radio does indeed to seem to be "dumbing down". In the newsgroups many tech questions are asked that have simple answers. Many of these questions are asked by hams whose callsigns indicate they are new licensees and some who hold advanced and higher class licenses. There are many references that hold the answers but these folks want the answers spoon fed rather than make the effort to research and learn on their own. "How do I..." questions seem to greatly out-number the "Where can I find out how to..." questions. Additionally of the active no-code proponents only Gary and Cecil seem to be the ones providing tech support (sorry if I missed a few of the others but your efforts are most appreciated by all). Most of the other no-coders seem to spend all their ng time debating and name

calling.

Morse code is as basic to amateur radio as knowing the Windows API is to writing Windows apps. Many junior C/C++/Windows programmers argue that knowing the API isn't needed because using a tool like VC++ 4.0 lets a wizard do all the framework. That is kind of like not needing to know code because a computer and TNC are available. OK here is a command line compiler, the needed header files, and a text editor, write a Windows app. "Uh, can't do it, don't know how." Here is a basic transmitter (Pierce oscillator) and a regen or DC receiver, communicate. "Uh, can't do it, don't know how." If you can do it high tech but can't do it with the basics, "what kind of guru are you anyhow?" (F.Zappa)

What happens to the band plans if a no-code HF ticket becomes available? As it stands now 43% of the US amateur's HF spectrum is dedicated to CW, RTTY and data. Will it remain this way or will that percentage shrink? What about a no-code HF ticket that allows the no-coders to use that 43% (or at least the general/advanced class portions)? AMTOR, PACTOR, CLOVER and all the new digital modes that will allegedly appear fit in nicely. That would fly fine by me and should make the technological no-code gurus happy as well unless ALL THEY REALLY WANT IS HF PHONE PRIVILEGES.

Amateur radio is a hobby but no longer is it a major technological resource. Engineers have big toy boxes in their commercial R&D labs that most amateurs will never be able to afford. Amateur radio is in its twilight and the code requirement has nothing to do with it.

sorry to ramble on...
73 de n4jvp

Hmm, 25x? Let me think. I'm 36 now, figuring I don't drop dead maybe it
would be worth it. I wonder if ham radio will be more interesting to me
as I get older -- I'm in a phase of life right now where I'm so busy.
Also, after being licenced for years and years, only now am I really
comfortable talking on a microphone.

I think the main reason I'm not an ARRL member now is that I had so many
magazines in my house, that I just had to stop subscribing to everything so
I could have a chance to clean it all out. Now, that I have the common sense
and wisdom to throw the magazines in the trash, maybe now again I can risk
joining.

2339. 51 STATES DISPUTE

Message-ID: <5809kl$86q@sjx-ixn6.ix.netcom.com>
Source record: 211315

I'm newly licensed and bought an HTX202 as a first Radio. I want to use
AC power when indoors. Is a 12 volt AC adapter sufficient or for an
extra $20 should I spring for a regulated 13.8V power supply. Both of
These are possibilities according to the manual. Also, what is a good
outside 2 meter antenna, or should I just make one?
Advice and opinions appreciated.

"About" five? You don't know exactly how many?

Why is it every few months you feel the need to tell everyone you operate
a repeater? It really doesn't elevate you above anyone. In fact, I have
a lower opinion of you because of it. You apparently feel the need to
fill a deflated ego. *Anyone* can put up rptr. And a working machine can
be made from practically any old xtal transceiver (with added shielding,
a COR, et cetera). It's no big deal, got it?

>....& OFTEN find people who regularly use
>my repeaters & will not help support them.
^^

Then take 'em down. They only duplicate the coverage of already-existing
machines and as such waste spectrum.

Yes, I recall seeing that. But with regard to Tucker, this just means the same four family members' names can keep reappearing on any new clubs he invents.

I'm afraid the old boy has a few screws loose. If I lived in LA I'd send Drew a round trip ticket in order to have him fire a missile at Tucker's Saddle Peak 147.435 rptr.

I shudder to think what folks with scanners, such as the news media, think of amateur radio when they come across that rptr.

>73...Dan...KE6RRU

I saw their big HF boxes and some 2m/70cm FM gear, but I didn't
see the VHF or UHF SSB gear. I also didn't see the TS-60. Also
absent were any station accessories.

My guess is that they carry only the most ordinary and in-demand of
Kenwood gear. It's the same reason that you won't find a single
variable capacitor in the 6 aisles of electronic "parts". HRO need
not fear; Fry's is, and always will be, a glorified Circuit City with
candy bars and Playboy Magazines.

Why bother with ham radio when you can peddle pagers, exhibit your ignorance of geography (by claiming that your pagers "work in all *51* states") globally, flame those who good-naturedly attempted to point out your mistake, and flame all of your fellow hams in Guam in the process by saying "Guam sucks" and "flush twice, it's a long way to Guam". I doubt that any of those activities will do much to "save the bands" which you profess to be concerned about.

I'm sure your continuing tirades are much easier for you to post than to simply admit that you were *WRONG* about the number of states in the USA. <g> (If you're in doubt, visit your nearest school or post office and COUNT THE STARS on the flag!)

Sorry you don't like "critics". Maybe you'd be happier living in a dictatorship somewhere. If you don't want criticism, don't make outlandish claims on a forum with WORLDWIDE distribution.

Let's settle this one for once and for all. The Simtel collection is
available all over the place and should be very well know:

"Simtel.Net : List of authorized FTP mirror sites

Simtel.Net, located at Walnut Creek CDROM, is the origin point of
Keith Petersen's world-wide distribution network for Shareware,
Freeware, and Public Domain programs for MS-DOS, Windows 3.x, and
Windows 95. It has more mirror sites than any other archive on the
Internet. Its web pages are also mirrored on many servers around the
world.

FTP.Simtel.Net is the name of the primary distribution site for these
collections. It is actually several ftp sites arranged in a rotating
pattern of IP addresses to help balance the load and to avoid access
problems due to network outages and simultaneous user limits. At the
present time ftp.ou.edu and oak.oakland.edu are the primary sites. Our
files are located in the /pub/simtelnet directory tree on these hosts.

The following sites are authorized mirrors of Simtel.Net as of the
revision date at the end of this document. This list will be
frequently updated as new sites are added.

Country URL (host and directory path)

Of the five points made in 97.1 as the Basis and Purpose of Amateur Radio, I don't see where the use of a closed repeater scores anywhere. I can see that designing and commissioning one could have excellent value in training and in art advancement if the machine is not an off-the-shelf rice box. But when it's up and working, that's where I see it stoping. Indeed I'd score the Little Leo's ahead of them for providing a better resource for emergency communications, if I was a judge in any coming spectrum war.

Cute! (Changing your return address from

"1" <ACABAMS@WORLDNET.ATT.NET>

to

"1" <1@msn.com>

so that you would APPEAR to be someone else.) You forgot to change the host-id in your message ID, though. The "@default" sticks out like a sore thumb. So in addition to a woeful ignorance of geography and an antisocial demeanor, you also have schizophrenia? How many separate personalities can you manifest in order to outnumber your "critics"?

Yep, let's keep 20m available for people like you (who believe the USA has 51 states!) to call people "dick heads". Now hurry up or you'll be late for your "Flat Earth Society" meeting...

BTW, even if service is "AVAILABLE IN ALL 51 STATES", do they work on YOUR PLANET? Next time you're conversing with hams on earth, find out how many of them needed contacts "IN ALL 51 STATES" to qualify for their W.A.S. (Worked All States) certificate.

> do is sit around and try to put people down.

"Someone makes a mistake"? I don't think that the arrogant pager peddler (you!) who has consistently defended his assertion that the USA has "51 states" has ever admitted to being in error.

> What next, your a
> racist too? Stay in Guam with the rest of the radioactive waste
> from the US.

"Racist"? What race of people inhabits your planet? You sure do hate HUMANS for some reason. Besides, those folks in Guam might be living in the future "52nd state". <g>

:
: Better check the books!

Oh? If the needed length is 2 feet, and the person adds 2 spare feet,
the loss in the cable is going to be twice as much - 3 dB more.

Now, that does not mean that there will be 3 dB loss, only that the
loss is doubled.

Confused yet? It is because dB is being used in two different contexts,
so provides two different results.

Carl Stevenson (carl@ais.net) wrote:

: Theory will ALWAYS be necessary and justified, because a MAJOR part of
: ham radio is RADIO (theory, how it works, experimenting, etc.) ... the
: fact that some people who are currently licensed have "fallen away from
: the gospel" does NOT change the reality of what ham radio is FOR in a
: regulatory/justification sense ...

In an ideal world, maybe.

: The technology (and therefore, theory) will ALWAYS advance (though very
: slowly according to the majority of current amateur practice) ...
: therefore the theory tests will always be relevant ... (they are a
: significant part of what ham radio is FOR) ...

If this were really true, then the question pool would NOT be published.
Also, the questions would be more rigorous. I don't think the Extra exam
is any harder than the Tech/General test was about 30 years ago.

: Morse code, however is a 150+ year old mode ... older, in fact, than
: radio ... it no longer holds its position as the ONLY way for hams to
: communicate, but it still (unfairly and unreasonably) holds the position
: as the SOLE mode with its own pass/fail element in the testing process.

True. That is why I have advocated CW as an ADDITIONAL endorsement on
on any license. Passing the code allows usage of some small band segments
that are not available otherwise.

Gene, I'd opt for the power supply. Consider one with 20amp or greater capacity. You might need the extra capacity down the road. There are a multitude of commercially made 2 meter antennas available. The majority of which I feel cost much more than they are worth. I'd suggest putting the money you save by making your own antenna towards the power supply. A J-Pole seems to work quite well. QST described how to build one using PVC pipe a year or so ago. You might want to look up the article.

Welcome to Ham Radio, 73 de Mark

I doubt it will continue. I'd bet that the internet is in for more drastic
change than we've seen on radio. Commercialization can kill a good thing!

:
: Consider this, Greg: When you drive your privately-owned vehicle
: on publicly-owned roads, no one can use that portion of the pavement
: you're driving on. When you park your POV on a publicly-owned street,
: no one else can park their vehicle in that same spot. You're certainly
: not claiming ownership of a portion of the road but that's pretty much
: what it amounts to. It's something that we all accept.

OK, lets follow this line of reasoning: No-one can use the portion of pavement I am driving on, just as no-one can transmit at the same time as me, but we are all sharing the same highway, just as we share a repeater. Different frequencies would be the same as different highways, but WE ALL SHARE.

Your illustration should instead be about Private Roads. Different story.

Brad VK2QQ where the repeaters are all open.

Message-ID: <WCbeIAANc$oyEwCK@visual.demon.co.uk>
Source record: 211342

Request for help:
I am designing a teaching / demo software system to explain
antenna design concepts.

I am looking for some C source code routines that compute the angular
gain distribution given the position, lengths and test freq. of a YAGI
style beam antenna. It can assume lots of things like material types,
this is only for experiments/teaching, not for winning prizes for
a new design!

It needs to be source code, because I need to wrap it up with my own
graphics and user interface.

I have seen "yo" for DOS, and I am sure such routines exist inside it,
but I need the source.

I am very greatful for any ideas!

OK, Bill, why did you join the ARRL ?

I can tell why I joined. Years ago, when I decided I wanted to be ham, I went to a local radio club and signed up for a Novice class. I was told that in order to get a ham license, I had to be an ARRL member, so I gave $25 to the club and they signed me up for ARRL membership. How's that for a con job ? Some time I'll tell you why I unjoined.

Or email 'n9zle@concentric.net' and ask him about a Hamcomm adapter. Plug it into a serial port and you can receive RTTY, FAX, SSTV, etc. You can make a simple circuit which allows xmit. He supplies the Hamcomm and two shareware programs for $20. I use one for HF weather fax pictures, works great, and also

copies SSTV pictures nicely on HF. He also has a web page, but I can't find the

address.

I too once needed a lawyer, and he came thru for me. I think the problem
is the
bottom half of the class. This lower 50% has contemp for the law, and
they are
who the lawyer joke are for. Basically, it is the Judges who have my
contemp, but
then they are lawyers also. And if you say, "What about the judge in my
case, where
I won", I will just say, at one point, the Judge fell asleep, and I won
in spite of him, mainly because of the strength of my lawyer.

You are, to some degree, correct.

The proliferation of lawsuits really isn't the fault of the Trial
Lawyers Association. In a sense, they are merely providing a service
to accomodate a demand for legal services in our country.

It is the desire to "get rich quick" (and sueing someone seems to
be a way of doing that with little to no risk if you can get a
lawyer to take your case on a percentage basis, which most will)
that the American people have today [inherently lazy bastards
they are -- the Japanese were right -- they want to lay around
with the good life, no work, have everything paid for them by
someone else -- basically an extension of the welfare-state
mentality that permeates this country today].

If the band was full of activity, I think that few would be complaining.
The fact that it has been privitized to quasi-commerical uses or
personally "owned" frequencies is the cause of the complaining.

> Why is that? Should two people holding a private conversation on
> HF be forced off-frequency because an "open" net wants to start up
> on the same frequency?

I 100% agree. So why should a private repeater be give the ownership of
the frequency just because they have sometimes used it in the past (as
is the case of low usage private machines). Let another share the
channel just as you noted in the HF case. Wait until the others have
finished with the frequency and then use the private machine. Sounds
good to me!

Went to my local Radio Shack to buy some GMRS radios that they have just advertised on sale for $199 each. Want to use these for camping. As usual, they did not have the advertised merchandise...but he could order them.

Because he did not have them, he questioned why I wanted those radios. Probably wanted to sell me some useless CB instead.

I get so sick and tired of going into RS and they don't have the advertised merchandise and the salespeople lack knowledge of their products. How many times have all of us been in an RS store where the salespeople have to sell you the floor model (which I won't buy) because they do not have enough stock; or, they have to order it.

The only reason I considered buying the radios is because they are manufactured by Motorola and not by some Korean/Chinese sweat shop manufacturing plant. When will Tandy's management learn? Since I was going to buy three radios, there out $600 in sales.

I just walked out and commented that this was typical for RS...advertise but no stock.

"If the government bans individual possession of guns and only the government owns guns, are we still a free people?"

gary@ke4zv.atl.ga.us (Gary Coffman) shared these priceless pearls of
wisdom:

->The ARRL has serious leadership problems, and because of the ARRL's
->power and influence, that means amateur radio has serious leadership
->problems. Again, you can't change that from the outside. If you care,
->you have to get inside and fight to make things better.

Gary --

I am a member of TWO hobby/professions, an engineer who is a ham, and a professional pilot who is into the homebuilt airplane field. I thought I could change one of the alphabet soup airplane groups for the better by getting inside and fighting for what I thought was change for the better. What I got for my trouble was a figurative bloody nose of the first magnitude and second order.

The insiders of any of these groups have a strangle hold on the sources of power, whether by a bank of proxy votes that can be used at opportune times or by other methods of rigging the elections to make it seem like an outsider really has a chance. My opinion, jaded though it may be, is that the only chance that an outsider has to change an entrenched power group is by forming a rival organization.

I refer you to the good old days of AFL and NFL football. The stodgy old NFL "three yards and a cloud of dust" style of play was totally taken by surprise by the AFL with their razzledazzle offenses, to the point where the merger of the two leagues was inevitable. I also refer you to the five or six abortive attempts by underfunded organizations to "take on" the NFL prior to the well-organized, well-funded AFL success. Victory don't come cheap OR easy.

Given my understanding of how the system is stacked against ANY serious threat from the outside, or from an outsider becoming an insider without losing the very core of why (s)he wanted to effect the change in the first place, I'm loath to believe that anything can be done UNLESS it is a charismatically-led and Rockefeller-funded rival organization.

>
>Well said, excellent.
>

NO, NO, NO ... VERY POORLY SAID ... the argument above advocates CB ... while we now have lots of "CBers who beep" (those who "just want to yack and play games" and "don't give a damn about how the radio works inside"), that is NOT what ham radio is FOR ...

Theory will ALWAYS be necessary and justified, because a MAJOR part of ham radio is RADIO (theory, how it works, experimenting, etc.) ... the fact that some people who are currently licensed have "fallen away from the gospel" does NOT change the reality of what ham radio is FOR in a regulatory/justification sense ...

The technology (and therefore, theory) will ALWAYS advance (though very slowly according to the majority of current amateur practice) ... therefore the theory tests will always be relevant ... (they are a significant part of what ham radio is FOR) ...

Morse code, however is a 150+ year old mode ... older, in fact, than radio ... it no longer holds its position as the ONLY way for hams to communicate, but it still (unfairly and unreasonably) holds the position as the SOLE mode with its own pass/fail element in the testing process.

THAT is backward, and it must cease for the sake of the future of ham radio ...

The quality of QST is questionable (at best)to many. due to the fact
that, as the "mouthpiece" for what's *supposed to be* a largely
technical activity, it's a technical wasteland for the most part ...

I suspect that most of the people who said "the dues are too high"
didn't mean that they couldn't afford 30-odd dollars per year, but
rather that the "value" received was not WORTH the sum asked ...

Well, it's a big, big Usenet. And rocks with "snow" on them is
something that's welcome, it's called ice climbing. Actually, I like
to keep touch with the digital newsgroup. The digital stuff is the one
thing I still find interesting in ham radio. Who knows, someday maybe
the ham stuff will be up to snuff with the internet. Could you
imagine, you use your palmtop to access a database service thru your
high-speed TNC and up pops a hyperlinked map depicting the number of
states in the country.

Evan Platt and others started a thread, let me tie the knot.

First Count: Puerto Ricans CAN VOTE.

Second Count: I never said Puerto Rico was a state, only that they have every benefit
as a state.

Third Count: What field is Evan Platt in? Post it here and I send you $50.00.

Fourth Count: Since all you Flag holders believe some much in what it means, what
about Freedom of expression and beliefs. Since the United States lends practically every country in the world money, hell they might as
well all be states. How about a Flag with 500 stars on it? Think of the
tax ratables?

Mark,
You get an 'A' for that paragraph. Oh, but I should not say that,
because everyone else might not agree.

Thank You for freedom of speech, and freedom of expression, and freedom of
choice.

Hey if I never wrote that page, this site would be empty!

HOW BOUT THAT. WHO SAID YOU CAN'T TYPR WITH YOUR CAP KEYS LOCKED AND
LOADED?

YOUR PAGER IS FREE BECAUSE NO ONE WANTS TO CALL YOU.

I'M SURE YOUR AMATEUR RADIO EQUIPMENT WAS FREE ALSO.

NOW I KNOW WHY THE FCC NAMED IT AMATEUR RADIO. BUT THEY FORGOT THE COMEDIAN
WORD OUT OF THE TITLE.

FROM An E-mail
Reflector.....Dave
K4JRB.

Gang I am going to use a little of your bandwidth with a desperate
plea for help.

My local Ham Radio Club the Delaware Lehigh ARC is holding it's annual
special event for Christmas time on the weekend of Dec 14 - 15 using
the call sign WX3MAS.

Well this ARRL affiliated club whose president is a No Code tech has
FORBIDDEN the use of CW for this officially sanctioned event.

You read that correctly those were there EXACT words CW was to be
FORBIDDEN.
I guess the influx of the codeless crowd has gone that far, the local
voice of the ARRL would speak those words.
Mind you they gave me some drivel that CW was not a popular mode and
few people would make contact with them in that mode and that the
Techs would not be able to enjoy the station.

I have managed to convice one of the old timers to let me and a friend
set up a classic home brew CW station seperate from the main station.
It will be on from 00:00 z to 02:00z on Sun Dec 15.
(Thats 7 to 9 pm eastern time Sat) And this is where you come in.

I need all of my brother and sister contesters to listen for us on
7.047 + or - durring that time I NEED your pile up! Listen closely as
the signal will be weak only about 35 watts or so.

Lets show these fellows that we who struggled so hard to learn this
mode will never allow it to be FORBIDDEN for any reason. Lets let
them know that what happened to the MARS frequencys will not happen on
the amateur frequencys.

Please don't let this turn into a huge battle over code / No code
requirments now it seems we are fighting for our very survival.

Please help.

If you hear WX3MAS on SSB ask for a CW qso
And please work this station on 7.047 12/15/96 00:00 to 02:00z

God bless you and happy holidays.

George
****

*George Cook.....AA3JU.....

End ...Revised slightly by K4JRB for this post.

Please remember this is a local decision not one from ARRL HQ!!!!!!!

I personally think that the best thing we could do was to give congress,
(etc.) 5 years to re-touch all of the laws to make them understandable
by the average product of our school system. It would be their choice as
to modifying the laws or improving the education system! ;o)

If it has been so poorly written that only a lawyer can read it, and two
lawyers come to different opinions of what it means, then it should not
be binding! (Think what that would do the the tax structure).

My girlfriend and I was hoping to go to Key West this year for Xmas
but as it seems all the State Parks are booked up
for the hoildays. We was wondering if anyone out there could suggest
a campsite for about 4 days somewhere in warm florida.
On the Gulf of Mexico or Atlantic is fine. Guess next best thing
would be Mobile, AL or Gulf Port,MS areas. Or is a little to
cold to camp in those areas ?
Thanks for any help,
73 Kyle

Nice to know! Any good places with more "accurate" listings? I prefer
not
to be notified that the machine *really* is closed by having the machine
shut off or getting rude responses - or no responses. My commute is
between
the Glendora area and Brea area - know of any friendly machines that
make it
through the hills and canyons? The SCRUBBA listings indicating "Covers
the whole
Southern California area" are about as accurate as the other items in
their
released database. A little more info could well squelch a lot of the
ill feeling
that has been streaming through this news group of late!

You are better off without them. AT 200 bucks each, they're worthless
for any serious/long distance communications, as they have no CTCSS
capability.

For forty bucks less each, grab a pair of Maxon 210+3 GMRS HTs.

Now it can be done. I suppose. Where do we start?

1. The magazine -- we can do all that on the net / web / newsgroups.
2. On-air stuff -- you got a PPP connection available? simultaneous
transmissions from all over. Technically trivial.
3. Paid staff?? -- who needs 'em?
4. Lobbying ??? -- discuss amongst yourselves.

An alternative organization? How about an alternative to organizations!

>watts (FM) on 6 meters. Eventually I would like to branch out into
>SSB and CW on 6 meters?

DON'T get an FM-only rig for six meters -- you'll miss out on all the real fun of this band. With SSB and CW, you can work across the U.S. during Sporadic-E openings and around the world when the sunspots hit their peak in a few years. Sporadic-E openings occur frequently in June and July and also around the end of December every year, regardless of the sunspot cycle. Just listen on the calling frequency of 50.125 and wait for the DX to come rolling in. Depending on where you live, you might get some Auroral propagation. If you want to invest in power and antennas, you can try meteor-scatter or even EME on six. But none of this fun comes on FM.

You don't need a lot of power to DX on six meters. Many people have gotten VUCC (100 grids) or even WAS on 10 watts or less. Some rigs to consider are the Yaesu FT-690R, the Icom IC-706 (includes HF and two meters, too), the Alinco DX-70T (HF, too), or the MFJ 6-meter rig that was recently reviewed in QST. If you already have an HF rig, you can get the Ten-Tec transverter kit and be on six meters for $100.

I hear more and more new operators on six-meter SSB during Sporadic-E openings, as code-free Techs discover what is the most exciting band available to them. Once you've done a double-hop E-skip QSO across the continent, yakking around town on repeaters seems terribly boring!

Good luck & 73,

Dave Finley, N1IRZ

I was a ham for about five years before I finally joined. The *only* reason I joined was because a local bookstore that carried QST went out of business. The *only* way I could get QST with running all over town to find another bookstore that carried it was to be an ARRL member.

>legitimate purpose of maximizing safety and minimizing the potential for
>harmful interference ...

And a quick listen on 14.313, 3895? and just listening in general can
show just how effective this practice has been!

This is a subjective practice, just as the code requirement is a
subjective req't to show, not only code receiving capability, but to
show that the person requesting the PRIVILEGE of getting the license
has put forth some effort to master some (but certainly not all) of
the techniques.

>and also because our "charter" is to be a

"charter"... in which FCC document where is this charter spelled out?

>technical service of self-education in the radio art and to maintain a
>pool of technicians and electronics experts ... code accomplishes
>NOTHING useful in today's world ... neither commercial services nor the
>military require any number of CW operators any more ... that past
>justification has become moot ...

The fact that the military does not require CW proves nothing. I can
and do communicate using CW and that, Sir, is useful! Your arguments
are, therefore, invalid!

I will concede that CW proficiency is not the only method available to
demonstrate the skills necessary to obtain a license. I would accept
some strong demonstration of electronic knowledge, operating skills,
or some other method. BUT, until some well crafted change in
licensing requirements is offered, I opt for the current standards.

My concern is that we live in a society of "instant gratification" and
many of out citizens want-want-want without any give-give-give. This
practice has led us down a path that is not only expensive but
destructive as well.

>

What Jim, KH2D, didn't tell you is what they ARE, Torkel..

MARS stands for Military Afiliated Radio Station... a service that provides
American Armed Forces personnel to send/receive messages to/from home..
there are allocations just outside the ham bands for these operations in
the HF and VHF spectrum...

CAP stands for Civil Air Patrol.. a civillian organization that mainly
concerns itself, to the best of my knowledge, with aircraft search and
rescue operations.. CAP has allocations immediate outside the 2 mtr band..

Hope that answers the question better.. Torkel

Huzzah! I remember when I used to stand by the mailbox *waiting* for each QST. Every issue inspired me to do something new, get on the air, or whatever. Even if to just dream about what *could* be done technically.

Now it's the 'ARRL Lobby and Contest Journal.' Plus a re-hash of 'Now You're Talking' and a serialization of stuff that used to be in a really neat pub called 'Understanding Amateur Radio.' Not to mention excessive ads.

Ugh. In many ways '73' is more like what QST used to be.

Bring back Lew McCoy and Doug DeMaw.

Yeah, yeah. Subscribe to 'QEX'

And pay extra for what used to be part of the deal.

Greg

Just a thought: how about using the a PC-based control program (assuming this is one of the Omni's which support it) and coupling that to a voice-synthesizer program connected to the sound card?

I've got this feeling that there is a shareware solution out there somewhere, too.

Anybody know of one?

But we are SHARING the frequencies with other repeaters. There are an
average of 6 machines on each of the 198 repeater pairs on 440 MHz in
Southern Calif. Besides that we have 300+ machines on two meters. The
highway is pretty full.

Wow! Such an original flame. Your mastery of code definitly sets you apart from the peon no-coders. After 4 years out of the hobby, I can still head-copy 30 WPM, but in my eyes, you don't look any different than the no-coders. Wow, watch out no-coders, the bad-ass Extra has just put you in your places. Wonder how he'd be a thousand feet up on holds that protrude 1/4" away from the rock face.

Hello and thanks for reading this..

Does anyone know if DF Systems is still in businness??

I went to their Web Site and placed and order over a week ago for their Handy Finder Kit. As of today, No kit and nothing heard from DF Systems period.

I have left them two pieces of mail and haven't heard a thing from them.

I am curious if they are still in business or if this is simply the way they normally handle their business affairs??

Thanks
Don

>give everyone a license as a right of birth?

Because theory (unlike code) is NECESSARY to meet government's
legitimate purpose of maximizing safety and minimizing the potential for
harmful interference ... and also because our "charter" is to be a
technical service of self-education in the radio art and to maintain a
pool of technicians and electronics experts ... code accomplishes
NOTHING useful in today's world ... neither commercial services nor the
military require any number of CW operators any more ... that past
justification has become moot ...

>
>I think we're in the dual slump of the end of Oscar 13, and poor sunspots.
>I don't see where the 'bloated ham radio' bureacracy is? Why would that
>affect the hobby, anyway?

Because it's in "Oldington" and it's caused staganation and decay in the
level of technical ability/knowledge of the average ham over the past 40
years or so ... we've fallen far behind and the "leadership" is so
rooted in the past that they don't even realize it ...

>I wonder if the internet is sucking off a lot of the people who would otherwise
>be involved with ham radio.

Parts of what ham radio COULD be would really appeal to the internet wiz
kids ... like, "How'd you like to have a WIRELESS T-1 (1.544Mbps)
connection to the net??? ... We could and should be doing things like
that, but the average ham can't even see the benefits ... also, when
you tell the computer wiz kid, "Oh, yea, by the way, before you can be a
"real" ham (rather than a "second-class citizen ham"), you have to learn
Morse code." and they'll say "Get real!"

>I think the issue for the future really, is
>what kind of fun thing can ham radio provide that you can't do, say, on
>the internet. The kind of thing I'm thinking of is the Shuttle ham radio
>stuff, or the guys doing the ham radio GPS. Maybe fast scan TV.

The issue for the future is: How do we grow our numbers and increase our
efficiency in the use of our spectrum in order to survive in the face
of increasing demands for spectrum by an ever-increasing demand for
wireless communications by business, industry, local/state government,
and "Joe consumer"??? ... if we don't do A LOT to gain political clout
and justify our existence, we will cease to exist in less than 20 years
(probably MUCH less) ...

2442. Re: Joining the ARRL -- Why?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-04 00:00:00 UTC
From: jmaxwell@netcom.com
Message-ID: <jmaxwellE1vFtI.6wB@netcom.com>
Source record: 211251

Perhaps it would interest those of you who are into this discussion to hear directly from one of the "OFWMs" involved in "running the ARRL." I'm the ARRL Vice Director in the Pacific Division.

The topic of this thread isn't new - we've all seen it before, many times. Unfortunately, these discussions never seem to come to any conclusion, They consist of a bundle of vague complaints, a bag or two of unsubstantiated rumors and innuendo, a few defenders usually show up to stand behind the League, there's a lot of wringing of hands, and then - nothing. Nothing at all. A few months later someone resurrects the thred and the cycle starts again.

A few people undoubtedly feel better for having let off steam, a few others may wind up being better informed (although often they will be MISinformed), but in general the problems or perceived problems are no closer to solution by the time the thread peters out than they were when it began. Nothing much of any permanence is accomplished.

Why does it always happen this way? Shouldn't these discussions lead to something really constructive?

One of the reasons this happens (or, rather, that nothing happens) is that there seems to be a reluctance for anyone to actually DO anything. Is that so hard?

For example, if you have a complaint that somehow involves the ARRL, instead of just running to your computer and hammering out a posting to .misc or .policy, why not take just one more step? Write to your Director (or even your Vice Director!) or Section Manager, lodge your complaint, but then *help them find a solution to the problem* if a problem actually exists.

Or if you see a niche that isn't being filled, *fill it*. Don't expect the League to do *everything.* Take a little initiative yourself!

We've all heard about hams who've tried to offer some comment or complaint to the local ARRL rep and have gotten nowhere. If you feel that your local League rep is doing a lousy job, don't just complain and then walk away - *do something about it.* Find out who the individual's boss is and tell the boss. If nothing else works, throw the rascal out! Don't just come on .misc or .policy and complain, run for office yourself and show the world how the job *should* be done. If you don't have the time to hold office yourself, find and actively support someone who does.

There are an awful lot of serious problems facing Amateur Radio today, probably more today than at any other time in our history. If you *really* want to make a difference, you can't make that difference by

sitting in a comfortable chair at home, tapping out complaint after complaint, pot-shot after pot-shot on a keyboard, proud in your non-membership in the League. Gary Coffman, who by no means is a League apologist, wrote recently "If you care, you have to get inside and fight to make things better." I believe that's sound advice.

>that keeps these individuals out of the hobby.

There still needs to be a test on rules & regs and ham practices ... the
theory test is no problem for someone who is qualified, so everyone
can/should be treated the same (no exemptions for BSEEs) ... that's my
view ...

>All these bright and talented people will supposedly spawn all kinds
>of new modes and hardware because they can experiment on the amateur
>frequencies. Wow that will be neat! I can't wait to see all the new,
>more efficient designs that will result. Perhaps this is why some fear
>that commercial interests will take over our HF allocations,
>technology is stagnating because these frequencies are not being used
>the way the bright and talented think they should be.
>
>I doubt it. A no-code general will not swell the ranks with talented
>types nor will it provide a wealth of new technologies, the no-code
>tech has shown this.

No-code alone will not do it ... it is a necesary component, though ...
we'll still have to actively recruit ... and we need to modernnize the
technical rules to eliminate outdated barriers to some of the more
modern things we want/need to do ... like changing the rules that pander
to the outdated idea that "narrower is *always* better" ...

>An argument has been put forth that the code requirement is just a
>rite of initiation. Hmmm, it used to be that to get a extra class
>ticket at least one years worth of on-the-air experience was required
>(at least holding a lower class license).

I would not have a problem with a "time in grade" requirement for
advancement from a "beginner's" license to a "journeyman's" license ...
I really think that "incentive licensing" and the very class-conscious
caste system that it has created has been VERY bad for ham radio ... I
would advocate only two classes (like beginner and journeyman) ... with
"time in grade" being a reasonable experience requirement ...

>Was that hazing or did it
>allow the newbie a chance to learn the rules of the road through

>practical experience? Now it is possible to become an extra without
>ever even turning on a radio, maybe that's good, maybe it's not. But
>learning CW is not hazing.

Learning CW in today's world IS hazing ... it's a ridiculous "busy-work" exercise which wastes the time and effort of the many who have NO interest in or intention of using CW EVER ... it turns off the technically inclined inn droves, and makes ham radio look like a purely nostalgia activity for a bunch of doddering old men who wish it was still 1920-1940 ...

>CW is out-dated is another argument. Commercial interests are phasing
>out the use of Morse code so it is out-dated.

Commerical interests are NOT phasing out the use of Morse code ... the majority abandoned it in drives DECADES AGO ...

>Commercial interests still use AM in a big way,

AM broadcast (and that's going to go digital in the next decade) and aviation are the primary users of AM ... aviation would have been well served to go to other technologies 10-20 years ago, but inertia and a large installed base of equipment have stalled that ... they do use other technologies in parallel, though ... new systems are NOT being designed around AM ...

>perhaps we should scrap the high priced
>SSB riceboxes and dig out those old DX-40s etc. Bad idea, lets build
>new AM gear using SMT and MMICs.

Bad idea ... it's grossly inefficient use of spectrum ... it would be a move backwards, not forwards ...

>Why does it matter what the commercial interests are using unless the
>hobby becomes professional-amateur radio?

It matters a LOT ... because we USED to lead the way ... now we've fallen FAR behind and they are using their spectrum FAR more efficiently than we are ... this will hurt us when our allocations are reviewed as the FCC looks for "homes" for new services or simply for more spectrum to auction off to make a buck (or a few billion bucks) for the federal treasury ...

>I have said before that it doesn't sound right that a ham should be
>unable to operate a most basic transmitter to communicate. I was very

>it more complex. What am I missing?

A varactor diode ...

>Morse code is as basic to amateur radio as knowing the Windows API is
>to writing Windows apps.

This is NOT a good analogy ... Morse code is NOT as crucial a foundation
of ham radio in today's world as is the sort of knowledge you refer to
in programming WinDoze apps ... though why one would *want* to write
apps for such an swful "operating system" is beyond me ...

>Many junior C/C++/Windows programmers argue
>that knowing the API isn't needed because using a tool like VC++ 4.0
>lets a wizard do all the framework. That is kind of like not needing
>to know code because a computer and TNC are available.

NO, that's like saying I don't ned to know theory because I can send my
radio to the factory for repair ...

>What happens to the band plans if a no-code HF ticket becomes
>available? As it stands now 43% of the US amateur's HF spectrum is
>dedicated to CW, RTTY and data. Will it remain this way or will that
>percentage shrink? What about a no-code HF ticket that allows the
>no-coders to use that 43% (or at least the general/advanced class
>portions)? AMTOR, PACTOR, CLOVER and all the new digital modes that
>will allegedly appear fit in nicely. That would fly fine by me and
>should make the technological no-code gurus happy as well unless ALL
>THEY REALLY WANT IS HF PHONE PRIVILEGES.

There is NO reason to deny phone privs to no-coders ... if they are
qualified to operate AMTOR, RTTY, and new modes that are being/to be
developed, they are equally qualified to operate SSB ... NONE of those
modes has one damned thing to do with Morse code ...

Using the code as a "filter" to keep people from HF privs has gone on
too long ... it is not fair and it is not justified ...

>Amateur radio is a hobby but no longer is it a major technological
>resource. Engineers have big toy boxes in their commercial R&D labs
>that most amateurs will never be able to afford.

I work for a $2Billion dollar company ... Yes, I have more test
equipment at work than I do at home ... however, I have a significant
collection of my own design tools at home, like:

computers (2 - a 486 and a 130MHz Pentium, another to be added soon)
analog circuit analysis/simulation (several varieties)
digital logic simulation (several varieties)
system-level simulation (block diagram level simulation - "Tesla"
schematic capture (2 versions)
PCB layout (2 versions, multilayer, SMT, router, Gerber, etc.)
VHDL (for all PAL/GAL and all major CPLD/FPGA famiies)
C/C++ (DOS/WinDoze 3.1, 95, NT/ OS2)
Pascal (same targets)
X86 assembler (same targets)
Fortran (DOS, WinDoze, OS2)
MicroChip PIC microcontroller family development tools

Texas Instruments TMS370 family microcontroller development tools
Motorola 68HC11 microcontroller family development tools
Analog Devices DSP development tools
Texas Instruments TMS320C2x/24x/5x/54x DSP development tools
Misc test equipment (collection growing)
and a rather complete library (plus CDROM data collections and the WWW)

I realize that I have more than the average ham, but my collection is NOT uncommon for those of us who are technical professionals ... may main problem at this point in time is space, since I'm living in an apartment, having relocated last May for a new career opportunity ...

>Amateur radio is in
>its twilight and the code requirement has nothing to do with it.

I realize that many of you who like the code passionately will never accept the reality, but it HAS hurt ham radio a great deal in the last 20 years ... PLEASE try to be more open-minded to the idea of dropping the CW *test* requirement ... some will still choose to learn code ... those who don't would (for the most part) have either stayed away (to our collective detriment) or simply tossed the key in the trash bin after getting the license, so what's the point?

Times change, progress is necessary ... please learn to accept some change so we can catch up with the times ... otherwise, we'll soon not have ham radio in any form ... our bands are too valuable to devote to a nostalgia clique ...

I can see it now, all the tech support and help you will get from Frys'
Just imagine all the 800 lines at AES, HRO, JUN's, TEXAS TOWER
and the rest of the real dealers when some newbie buys a rig and cant
figure out how to turn it on or has to return it, YEP you will sure get a lot
of support from that group. LET THE BUYER BEWARE.............

>vy 73! de Bart

Yes. I used one at field day without a CW filter, and I would highly not recommend it. The receiver in the 706 also has the same image problem that the 745 did, i.e., you can hear the same CW signal on two different frequencies. With a CW filter, I imagine it would be as good as any other radio for CW use.

From: "Roland R. McCormick III" <recluse1@ix.netcom.com>
Message-ID: <01bbe1a9$616a4e20$4f08b8cd@RMcorm656>
Source record: 211256

There aren't many operators here in my QTH that operate six meters, but a few friends of mine are planning on trying to start some activity. What kind of range can I expect out of well tuned 6 meter mobile rig. I plan on getting a Standard C5900 that will have max output of 45 watts (FM) on 6 meters. Eventually I would like to branch out into SSB and CW on 6 meters?

Thanks in advance for your advice. They are appreciated and perhaps someday I will be able to answer someone else's question.

Well, Terry, if you had bothered to join the WIA, instead of waiting until it
after bankrolled *your* particular special interest, you could have got
yourself and and some like-minded friends elected onto Council, where you could
have taken an active role in that decision.

Fortunately, our friends at MacUni are not preoccupied with old grudges of
the past (like some people I could mention), and have offered to host the VK2 Web
page, an offer for which I am very grateful. Thanks Tony VK2TJF!

I'll notify everyone when the Web page has settled in to its new home.

2456. A Ham's Night Before Christmas

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-04 00:00:00 UTC
From: kn4aq.gary@mms.net
Message-ID: <583s2i$5eo@ralph.vnet.net>
Source record: 211265

A Ham's Night Before Christmas

Yet another corruption of Clement Clarke Moore's
classic Christmas tale, this time distorted by
Gary Pearce KN4AQ, and the Raleigh Amateur
Radio Society, Raleigh, NC, December 2, 1996.

Twas the night before Christmas,
And all through two-meters,
Not a signal was keying up
Any repeaters.

The antennas reached up
From the tower, quite high,
To catch the weak signals
That bounced from the sky.

The children, Tech-Pluses,
Took their HT's to bed,
And dreamed of the day
They'd be Extras, instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters
For that rare ZK3.

When the meter was pegged
by a signal with power.
It smoked a small diode,
and, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster
Logged a spot of the signal
On the DX PacketCluster,

While I ran to the window
And peered up at the sky,
To see what could generate
RF that high.

It was way in the distance,
But the moon made it gleam -
A flying sleigh, with an
Eight element beam,

And a little old driver
who looked slightly mean.
So I though for a moment,
That it might be Wayne Green.

But no, it was Santa
The Santa of Hams.
On a mission, this Christmas
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax
Right into the shack.

While Mom and I hid
Behind stacks of CQ,
This Santa of hamming
Knew just what to do.

He cleared off the shack desk
Of paper and parts,
And filled out all my late QSLs
For a start.

He ran copper braid,
Took a steel rod and pounded
It into the earth, till
The station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes
In my linear amp...
(Never worked right before --
Now it works like a champ).

A new, low-pass filter
Cleaned up the TV,
He corrected the settings
In my TNC.

He repaired the computer
That would not compute,
And he backed up the hard drive
And got it to boot.

Then, he reached really deep
In the bag that he brought,
And he pulled out a big box,
"A new rig?" I thought!

"A new Kenwood? An Icom?
A Yaesu, for me?!"
(If he thought I'd been bad
it might be QRP!)

Yes! The Ultimate Station!
How could I deserve this?
Could it be all those hours
that I worked Public Service?

He hooked it all up
And in record time, quickly
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent,
But the cards and the postage
Will cost two month's rent!

He made final adjustments,
And left a card by the key:
"To Gary, from Santa Claus.
Seventy-Three."

Then he grabbed his HT,
Looked me straight in the eye,
Punched a code on the pad,
And was gone - no good bye.

I ran back to the station,
And the pile-up was big,
But a card from St. Nick
Would be worth my new rig.

Oh, too late, for his final
came over the air.
It was copied all over.
It was heard everywhere.

The Ham's Santa exclaimed
What a ham might expect,
"Merry Christmas to all,
And to all, good DX."

Most implementations make this transparent to the user. They'll add
a teraohm resistor automatically.

>
>3 dB more, if the shortest possible length is 2 feet.

Hmmm, that's mighty lossy coax you're using there, Bill.

Doubling the length does double the loss, but that doesn't mean
3 db. 3 db means you've lost *half* your power. If the cable only
has a loss of 0.02 db per foot, then going from 2 feet to 4 feet
increases loss from 0.04 db to 0.08 db, not 3 db.

BTW, 0.02 db per foot is typical of high grade coax like 9913 at
a frequency of 400 MHz.

Does this mean we really have more like Twelve Hundred 440 repeaters?
And still only the few open ones. That would mean the prior 90% closed
calculation is really more like 97%. If it really is that high -- six
per pair-- would seven make that much difference? That could open up 190
new open machines! ;o>

Carl,

I'd love to have a wireless T-1 connection, and fast scan TV to boot!
The bandwidth required for these modes precludes use on the low bands. These
are projects for UHF and microwave frequencies that codeless hams already can
use. The computer wiz kid doesn't have to learn a dit of code to get a
licence! The bands in danger of being confiscated and sold are VHF and up.
This is the future of amatuer radio. Why load up the crowded HF bands with
more phone ops, and mindless computer driven QRM machines? There's lots of
headroom and bandwidth available above 10 meters, no code needed!

73 and Good Luck!
Larry

2464. Need text based call sign lookup (not web)

Newsgroup: rec.radio.amateur.misc

>candy bars and Playboy Magazines.

Yeah, but still... if Fry's starts carrying amateur radio gear, we might see a couple of desireable things happen. Firstly, prices may drop, just like they did with computer gear when the big stores like Fry's and Compusa got rolling. Secondly, for this reason, and simply because of the visibility of Fry's, we might see more people become interested in amateur radio.

I see these as good things.

Does anyone know if any of the LA Fry's are carrying ham gear?

Hi Gene,

The wall wart is Ok for charging the battery, but it isn't a good thing to use to power the rig. If the battery is way down and you try to transmit while connected to the wall wart, you'll get nasty hum on your signal, and the radio can freak out in some cases. If the battery is near full charge, it'll be Ok, but then you're really running on battery power. In other words, in transmit the radio draws more current than the wall wart can supply, so the battery has to make up the difference. If the battery is nearly flat, it can't do that, and you'll have problems.

OTOH, if you use a good regulated supply with a large enough ampere rating, things work fine whether the battery is near full charge or flat or completely off the radio. So for operating, a regulated power supply is best.

However, the regulated supply may not be best for charging the battery. That's because it doesn't limit current to the battery and can allow the battery to charge too quickly. The radio has a regulator in it to help prevent this, but it depends on the current limiting inherent in the wall wart too. So I'd suggest you use the regulated supply when you are operating, but switch to the wall wart when just charging the radio battery.

(There's a better way, using a proper drop in pulse charger for the battery, but your battery must be designed for bottom charging. Most aftermarket batteries are, but the stock battery shouldn't be bottom charged.)

On the subject of antennas, I strongly suggest you build your own. It can be fun, and it is a learning experience worth having. You'll also save money. Either a 1/4-wave groundplane or a J-pole would be suitable as a first antenna project. The groundplane is a bit more foolproof for a beginner to build, but the J-pole may offer a bit more performance, and can ease

physical mounting problems in many cases.

The tricky part of building a J-pole is getting the matching section length correct (it should be about 96% of an electrical quarterwave, including velocity factor), and locating the matching tap in the proper position. The velocity factor sensitivity is rather extreme, so just following someone else's plans may not work unless you are using the exact same materials that they used. There are a number of plans floating around, however, and as long as you keep in mind the caution about velocity factor, making a J-pole is rather easy. (A J-pole made from copper plumbing pipe is rather foolproof because the air dielectric insures a repeatable velocity factor, so you can just slavishly follow the plans and it will work.)

A 1/4-wave groundplane is nearly foolproof. All you need is a SO-239 chassis connector and 5 19.5 inch lengths of rod or heavy solid wire (#12 bare house wire is fine), plus a hose clamp for mounting.

Solder one of the rods to the inner pin of the connector (on the *back* side of the connector), and solder the other 4 to the chassis mounting holes of the connector (make a little "L" bend in the wires so they wind up sticking out horizontally from the connector). If the connector is a Radio Shack plated connector, run a file over the flange first to remove the plating and it will solder much easier. You'll need a big iron or gun to solder these connections. A torch can be used, but be careful not to melt the inner insulation of the connector.

When you're done, you'll have one rod (wire) sticking straight up and 4 radials extending out horizontally. Bend the horizontals down to about 45 degrees below horizontal. This will improve the match of the antenna to the coax.

Now all you have to do is screw the coax to the connector (coax terminated with a male PL-259), and use the hose clamp to clamp the PL-259 body to the top of your mast support (rotate the assembly so that the radials and the support don't interfere). The support can be wood or metal, or even PVC pipe (though sunlight does bad things to PVC, use the black kind outside).

A neat way to mount this antenna is to cut a half circle notch in the end of the mount pipe extending down about 1.5 inches, feed the coax through the pipe, and use the hose clamp to secure the PL-259 body inside the pipe via the notch at the end. This works well with 1 inch pipe. If you use bigger pipe, you'll need to secure the antenna outside the pipe, or cut the notch to more than half pipe diameter so the hose clamp can tighten on the connector body.

That's all there is to it. If you have, or can borrow, a VSWR meter, you can trim the length of the upright rod for a perfect match. But

if you don't have a meter, don't worry about it, the SWR will be close enough so that the radio can work with it without any trimming.

The higher you can mount the antenna, the better it will work. Use a good grade of coax. RG-58 is *not* satisfactory for long runs. Use RG-8 or Belden 9913 or the Wireman's 4XL. (If the run is no more than about 50 feet, you can get away with using RG-8X mini-foam cable.)

Putting connectors on coax *properly* is an art. There is some guidance in the Handbook, but if you've never done it before, enlist the aid of someone who knows how to do it right. The mini-foam cable can be tricky because the foam melts easily. The other cables are more tolerant of a little more heat. Check and verify that the connectors are installed properly. Many "antenna" problems are actually problems with the coax connector installation. The time to find that out is *not* when the antenna is way up in the air.

Michael P. Deignan wrote:
> An excellent argument. Why should I be forced to learn about RTTY
> for FM voice privs? Why force me to learn about HF packet when all
> I want to do is yack on HF SSB? The list is endless.

Yeah, that's right. Let's apply a relevent analogy:

I've heard the whining in academia over the years: why should I be forced to learn philosophy when I want to become cardiologist? Why I am forced to learn calculus when I want to practice law? Why I am forced to study the French Revolution when I want to become an engineer?

Want more? Why am I forced to learn the elements of a stall, when I take my private pilot's test, even though I'll never operate my aircraft at minimum controllable airspeeds? Why am I forced to take criminal law when my ambitions are in corporate law? That's right...this list seems to be endless too. Hmmmm.

It all boils down to education and the understanding of basic concepts; a need to expose one's self to a broad array disciplines fosters a desire to learn more about other subjects.

Now, back to amateur radio. If you don't want to learn Morse, then don't. You have two options:

1) Take the no-code exam. If you pass, you'll have many new and exciting technologies at your disposal above 30 Mhz, and best of all you won't be forced to learn that trite, passe' and dreadful code.

2) Avoid the hobby all together. Analogy: If you don't like guns, don't get into a gun collecting hobby.

And an ICE, a good disassembler, a logic analyzer with a *deep* FIFO,
an EPROM burner and a PLA programmer, etc. Just be sure to keep that
soldering *gun* well away from the unit. There's nothing inside that
can tolerate that kind of abuse.

You *can* reverse engineer the unit if it isn't too badly fried,
but it'll be a lot easier to do it now while it is working rather
than waiting for a custom ASIC or EPROM to fail. Of course if AEA
releases source, you won't need any of that, other than the burner
and PLA programmer.

: Some time I'll tell you why I unjoined.

Sounds like their motivation could have been preserving the "Special Service
Club" status quo.

In 1997, our local club will be recognized for 50 continuous years as an
ARRL Special Service Club. In order to maintain that distinction, 51% of
the club members must also be ARRL members. These days, it isn't that easy.
I know that our membership barely hovers above that level, because most of
the newer hams who join the club, don't join ARRL.

I can see where some clubs who want to retain this distiction might have to
redefine
what constitutes a "member."

It's unlikely that they would. Since most public safety comms have
moved to trunked systems, regular scanners have disappeared from
newsrooms. In most cases, they have an arrangement with the departments
that they monitor and have a proper trunked receiver programmed to
follow the various group assignments for that department. Thus they
no longer have any use for scanners. We haven't bothered to have
scanners in our newsrooms for about 5 years now.

Hi,

Our club is trading for a Milcom International 220 MHz amplifier. Model number
P15-05F2-C1-M. Runs on 28 Volts

This is a robust unit that takes a 200 mw signal and has an output of 150 watts.
the unit is nicely packaged and should be a great repeater amplifier.

My problem, no documentation. Any one ever heard of this thing?

In which case, for the majority of Hams I know, all the component theory and oddball modulation theory and AC Network theory is just as much hazing. None of these gentlemen had or have any intention of building anything. They go down to the radio shop, buy their little handheld radios and start transmitting. They are glorified CB users.

Why should they have to learn all that 'technical' stuff when all they need to know are the rules and regulations? Of what relevance to them is the operating theory of a transistor or a Pi filter or a triode? They have no intention of ever using that 'complicated' stuff.

> ...<Much more snipped>

If progress is having to learn less, then you can keep it. If fewer people today can cope with the tests ("...math class is sooooo hard..."), do you think dumbing down the requirements is going to make things better?

I'm all for minimisation of government interference. However, I have a hard time with the idea of removing elements of the tests. Mark my words, once the code requirement is gone, the next thing will be the remaining technical elements ("...why should I have to learn this? It's hard and I'll never use it...").

I believe the tests are too easy. They should be made more difficult AND keep the Morse requirement. Before you say, "it's OK for you, you have your license", check on Deja News and check my call sign below on

the various databases, you'll see that I held that opinion before I wrote my tests. I mention this just to stem any cries of "hypocrite".

> legitimate purpose of maximizing safety and minimizing the potential for
> harmful interference ...

Nonsense. Very little of the theory is to do with safety. If you can claim that code is useless to you, I can claim that knowledge of phase modulation is useless to me.

In my experience, for most of the Hams I know, much of the technical knowledge is useless to them - they buy their little radios and start talking. Just a few rules and regulations is all they require. After all, Icoeaswood has done all the hard work for them. So why do you want to shove all that useless (to them) theory down their throat?

WRT the charter of Ham radio, the "pool of technicians and electronics experts" is rapidly becoming a farce, IMO, precisely because of this mentality of stripping out stuff that is perceived as too hard or too antiquated.

What is so sad to me is all this noise over a silly little test, regardless of the rights and/or wrongs of mandating it. Just do it, it's easy if you spend fifteen minutes a night on it for about a month. I'll bet most of the people complaining about having to do the code test spend much, much more time watching the glowing box that sits in the corner of their living rooms.

Heck, for those of you who read this newsgroup regularly, you spend more time doing that than the time required to exercise your Morse. Stop reading it for a month and study the Morse. If the HF bands are so valuable to you, that little test will prove to be no barrier. If you have no physical handicap and you consider the test to be too difficult, then maybe those bands are not as valuable to you as you might claim.

Apologies for perhaps coming across as strident, but for goodness' sake, the test is not that big a deal. Have we, as a so-called technical, educated, can-do, no obstacle is too high, we choose to go to the Moon society really fallen so far?

I've an idea, let's open up all the Ham bands, just as CB is today.
Think of all the political clout we'll get with all those extra people
using the bands!

Well finally heard from DF Systems, it seems that not answering mail nor bothering with orders for weeks at a time is the way that DF Systems normally does things.

I was informed by the owner that he doesn't own a watch, nor a calendar, and that he answers his mail when he checks it, and that DF Systems was a hobby with him.

This is all well and good, I only wished that he had let me know this when I logged on his Web site, I wouldn't have wasted my time with his outfit if he had..

>complaint, but then *help them find a solution to the problem* if
>a problem actually exists.

Although I agree with what you say to some extent, James, I think you are
ignoring some very important points.

Firstly, QST ignores alternative points of view in a systematic way. When you
read QST, you would never know that ham radio has a lively dialog and lots of
healthy disagreements and intelligently thought-out points of view. QST
glosses over points of view that are opposed to the ones promulgated by
the League.

Secondly, most hams are only faintly aware of the League's bizarre
organizational structure, and have no idea who or what a section manager
or a division manager is. They do not feel that these people represent them.
This can be seen by the small numbers, typically a few thousand, that vote
in any given ARRL divisional election. (Based on the recent elections).

An organization like ARRL should encourage open discussion, and QST should
serve as an open forum for such. It does not. Until it does, the internet,
not QST or ARRL, will be the forum in which the average ham expresses
himself.

>Good point.

I think that the ARRL *could* if it wanted to, allow one to join the League without receiving QST. If the argument is to be 'but we need to have an official organ' (some said that a certain President was the biggest 'organ' the League ever had, but I digress), then I reply 'put the things you really want me to know on your Web page. I choose to read them there!'

If they really want to make it 30 bucks, then give me a choice of QST, QEX and a repeater directory, or NCD and a repeater directory, or whatever.

Or maybe offer me the CD-ROM of all of the above at the end of the year, and mean-while, I'll read the DC news and the League Lines on the Web.

I note that they charge the same for a library to subscribe to QST as they do for a membership with QST. Now, that isn't fair, as a library doesn't get membership benefits.

The current situation, with the ARRL doing all its official business in QST (which they charge for) and then charging more for most of the interesting stuff is sort of a no-win.

>A no-code general will not swell the ranks with talented
>types nor will it provide a wealth of new technologies, the no-code
>tech has shown this.

This is a non-sequitor. There is absolutely nothing that indicates a high level of correlation between code ability and technical ability. One would assume from the sentence above that the author believes a change in the General class license code requirement would have some affect on the technical qualifications of the operators earning such licenses. This is totally unsubstantiated. Indeed, it could easily be argued that an overall swelling in the ranks, would include a corresponding increase in the number of talented types - not the converse. The no-code tech has indeed shown _this_. The author has chosen to ignore it, and indulges instead entirely in groundless speculation.

>Additionally of the active no-code proponents only Gary and Cecil seem
>to be the ones providing tech support (sorry if I missed a few of the
>others but your efforts are most appreciated by all). Most of the
>other no-coders seem to spend all their ng time debating and name
>calling.

I wonder if you took a similar survey of the active pro-code proponents. I wonder further about your point. It has been suggested that in order to post on rrap, one should have an amateur license. Are you now suggesting that one must also post to the other newsgroups in order to have the right to post here?

>Morse code is as basic to amateur radio as knowing the Windows API is
>to writing Windows apps.

Morse code is certainly as basic to the CW mode as you suggest about Windows and Windows apps. The argument centers around how essential the CW mode is as it pertains to operator qualifications. As it has been stated many times over, it is by far the simplest of all modes to operate. How then is the Morse exam a good measure of operator qualifications? The test is not an operational test, contrary to the views expressed here in the past. According to part 97 section 503b, the written exam is intended to fulfill the operational testing requirement. The Morse test examines only the applicant's ability to decode Morse at a specified rate. Extrapolating this ability beyond that, or presuming other qualifications is unwarranted.

The necessity and merit for code ability as a qualifier for licensing is what is under discussion. The merit of CW as an operational mode is less in dispute than is it's merit as a measure of operator qualifications as they relate to frequency and license privileges. As a mode, CW is as usable as any other - I would even add that for me, it is the most enjoyable. But it's probably safe to say that it has never been the FCC's intent to force joy on anyone. The mode is enjoyable for many, but essential to no one. If the mode is non-essential, then code should likewise. be non-essential.

>What happens to the band plans if a no-code HF ticket becomes
>available? As it stands now 43% of the US amateuri¿½s HF spectrum is
>dedicated to CW, RTTY and data.

The way I read part 97, 100% of the spectrum is dedicated to CW. Much of that is also useable for other modes. If phone is truely only 57%, that is problematic for the long term. But it's difficult to envision how we could possibly make a persuasive argument for more spectrum based solely on crowding right now. Yes 20 meters gets to be armpits and elbows, and the same with 40 meter CW on ocassion, but most times the bands entotal have plenty of room - particularly the CW portions. And taken over a 24 hour/7 day period, it's nearly impossible to make a case for overcrowding.

>Will it remain this way or will that percentage shrink?

Might shrink. Depends.

>What about a no-code HF ticket that allows the
>no-coders to use that 43% (or at least the general/advanced class
>portions)? AMTOR, PACTOR, CLOVER and all the new digital modes that
>will allegedly appear fit in nicely. That would fly fine by me and
>should make the technological no-code gurus happy as well unless ALL
>THEY REALLY WANT IS HF PHONE PRIVILEGES.

Sour grapes, eh Fritz? Code for phone privs, no-code for code privs: and you want to subscribe to this logic?

>Amateur radio is a hobby but no longer is it a major technological
>resource. .....
>Amateur radio is in
>its twilight and the code requirement has nothing to do with it.

Speak for yourself Fritz, some of us are just getting started. ;-)

In article <jmaxwellE1vFtI.6wB@netcom.com> jmaxwell@netcom.com (james a maxwell) writes:
>Perhaps it would interest those of you who are into this discussion to
>hear directly from one of the "OFWMs" involved in "running the ARRL."
>I'm the ARRL Vice Director in the Pacific Division.

Then you should listen more, and talk less.

Historically, the ARRL and its powers haven't dealt very well with
its critics amongst its constituency. The response varies from
the slanting of QST towards presumed policy to lawsuits and
dirty tricks should any one critic, like W2NSD, get too many
people to listen.

Jim, I'm sorry, but your contribution to this group seems to
support that tendency.

>The topic of this thread isn't new - we've all seen it before, many
>times. Unfortunately, these discussions never seem to come to any
>conclusion,

Perhaps because the ARRL doesn't really respond to them.

> They consist of a bundle of vague complaints, a bag or two
>of unsubstantiated rumors and innuendo, a few defenders usually show up
>to stand behind the League, there's a lot of wringing of hands, and
>then - nothing. Nothing at all. A few months later someone resurrects
>the thred and the cycle starts again.

Thank you for demonstrating the problem. First of all, you're invalidating
what people are saying by calling them 'vague complaints, a bag or two
of unsubstantiated rumors and innuendo...' Already you aren't listening.
Gee, I bet a little later you'll go on to complain that nobody ever
does anything to work with you, after such a careful hearing. Wonder
why?

>A few people undoubtedly feel better for having let off steam,

It's only by not *LISTENING* that you make it just 'steam.' If you
LISTENED then it would be more. You have the power to do so. It's
right in your title.

> a few others
>may wind up being better informed (although often they will be MISinformed),
>but in general the problems or perceived problems are no closer to solution
>by the time the thread peters out than they were when it began. Nothing
>much of any permanence is accomplished.

So people should shut up and do what you want them to do?

>Why does it always happen this way? Shouldn't these discussions lead to
>something really constructive?

Yep. There have been lots of good ideas. Apparently you guys have been
reading. Why do you let those ideas sit there?

>One of the reasons this happens (or, rather, that nothing happens) is
>that there seems to be a reluctance for anyone to actually DO anything.
>Is that so hard?

In many/most cases it's not a matter of 'DO.' It's a matter of our
representative and lobbying group-apparent changing its approach.
It's a matter of making some hard decisions. And of doing something
which is, perhaps, less self-serving.

Not to mention the many who have tried to 'DO' something, only
to have the ARRL powers-that-be actively BLOCK their effort in
some sort of turf-war.

Or whose offers are refused because they aren't the SCM's buddy. Or
are on the wrong side of some disagreement.

>For example, if you have a complaint that somehow involves the ARRL,
>instead of just running to your computer and hammering out a posting to
>.misc or .policy, why not take just one more step? Write to your
>Director (or even your Vice Director!) or Section Manager, lodge your
>complaint, but then *help them find a solution to the problem* if
>a problem actually exists.

But Jim, why would people do that? After all, you've demonstrated the
usual response, which is denial of the problem, being told that you
are 'misinformed,' or being read chapter and verse of ARRL policy
on the matter. When there is an answer.

Don't you understand? MANY OF YOUR CONSTITUENCY BELIEVE THAT THE ARRL
IS UNRESPONSIVE, IS ORGANIZED TO PROTECT ITS OWN UNRESPONSIVENESS, AND
IS DESIGNED TO RESIST EFFECTIVE CHANGE. Until you change that image,
what you complain about is going to shape people's actions.

And it takes a LONG time to live that kind of stuff down. That's not
the fault of those who view the ARRL with a jaded eye, though. The ARRL
has made some horrendous mistakes (dealing with Wayne Green for one,
it's handling of the LARC debacle for two) which have shown it to
be very jealous of its organizational positions.

>Or if you see a niche that isn't being filled, *fill it*. Don't expect
>the League to do *everything.* Take a little initiative yourself!

The problem Jim, isn't the *everything* so much as the habit of doing
the *wrong* things.

>We've all heard about hams who've tried to offer some comment or complaint
>to the local ARRL rep and have gotten nowhere. If you feel that your
>local League rep is doing a lousy job, don't just complain and then walk
>away - *do something about it.* Find out who the individual's boss is

>and tell the boss. If nothing else works, throw the rascal out! Don't
>just come on .misc or .policy and complain, run for office yourself and
>show the world how the job *should* be done. If you don't have the time
>to hold office yourself, find and actively support someone who does.

In Junior-High Civics 101 that's all well and good. In the reality of organizational politics and old-boy's networks, it sort of breaks down. You didn't get to the age you've reached today not knowing that Jim. So I tend to dismiss the whole thing as sort of boiler-plate 'if you don't like the government, vote it out' rhetoric. After all, when I look at my choices for Director, I see two versions of the same BS on the ballot. Toss-up city.

>There are an awful lot of serious problems facing Amateur Radio today,
>probably more today than at any other time in our history. If you
>*really* want to make a difference, you can't make that difference by
>sitting in a comfortable chair at home, tapping out complaint after
>complaint, pot-shot after pot-shot on a keyboard, proud in your non-
>membership in the League. Gary Coffman, who by no means is a League
>apologist, wrote recently "If you care, you have to get inside and
>fight to make things better." I believe that's sound advice.

Again, Jim, you're demonstrating that you really don't take people seriously. I think someone who take the time to type out what you call a 'pot-shot' *has* probably made a contribution and spent some time.

So you have a choice: you can listen to them. Or you can dismiss what they say because they haven't happened to say it through the channels which keep you comfortable in your snug little world.

Looking at the way that you've dismissed what I would regard to be, at least in some measure, thoughtful and constructive criticism (i.e..'vague complaints, a bag or two of unsubstantiated rumors and innuendo,' 'steam,' 'pot-shot'), I'd probably not vote for you.

Then again you're here, so maybe you're the best we have, and a point in your favor.

But I'm sure damned uncomfortable with the way you regard the ideas, however sometimes badly expressed, of your constituents.

Just like the ARRL in general.

Greg

```
Aside: Although 32-bit Windows/NT is not a perfect operating system,
its ease of use and the availibilty of software make it an extremely
popular OS. While not as powerful as UNIX , more and more commercial
institutions are switching to 32-bit Wintel networks. The WIMP
interface makes it extremely easy for a novice to use unlike command
line UNIX or even X-windows.
```

"Many junior C/C++/Windows programmers argue
that knowing the API isn't needed because using a tool like VC++ 4.0
lets a wizard do all the framework. That is kind of like not needing
to know code because a computer and TNC are available." - original
post
>
>NO, that's like saying I don't ned to know theory because I can send my
>radio to the factory for repair ...
>
No, it like saying I have use the complicated tools because I don't
know the basics.

"What happens to the band plans if a no-code HF ticket becomes
available? As it stands now 43% of the US amateur's HF spectrum is
dedicated to CW, RTTY and data. Will it remain this way or will that
percentage shrink? What about a no-code HF ticket that allows the
no-coders to use that 43% (or at least the general/advanced class
portions)? AMTOR, PACTOR, CLOVER and all the new digital modes that
will allegedly appear fit in nicely. That would fly fine by me and
should make the technological no-code gurus happy as well unless ALL
THEY REALLY WANT IS HF PHONE PRIVILEGES." - original post
>
>There is NO reason to deny phone privs to no-coders ... if they are
>qualified to operate AMTOR, RTTY, and new modes that are being/to be
>developed, they are equally qualified to operate SSB ... NONE of those
>modes has one damned thing to do with Morse code ...
>
Except all are based on the simplest transmitter that they do not know
how to operate. Isn't SSB becoming outdated as well? It is over 50
years old and it isn't a whiz-bang digital mode or is it "ALL
THEY REALLY WANT IS HF PHONE PRIVILEGES"?

>
>Using the code as a "filter" to keep people from HF privs has gone on
>too long ... it is not fair and it is not justified ...
>
Is it HF privileges that the no-coders want so they can experiment
with the new modes they will be developing or is it "ALL THEY REALLY
WANT IS HF PHONE PRIVILEGES"? To me it sounds like the latter.

>
Ah technical professional as opposed to hobbyist ham...
>
>I realize that many of you who like the code passionately will never
>accept the reality, but it HAS hurt ham radio a great deal in the last
>20 years ...
Please select the correct answer:
A - the code requirement has hurt ham radio in the last twenty years
B - the technological advancements of the last twenty years,
especially PCs and the internet, have hurt ham radio
C - not having HF phone privileges hurts
>
>PLEASE try to be more open-minded to the idea of dropping
>the CW *test* requirement ... some will still choose to learn code ...
>those who don't would (for the most part) have either stayed away (to
>our collective detriment) or simply tossed the key in the trash bin
>after getting the license, so what's the point?
>
I and many others are open minded about dropping the code requirement
but to be convinced (speaking for myself) I need better reasons than
have been given thus far. "I can't do it. It's too hard. It's
outdated." just doesn't cut it. If someone is unwilling to devote the
time and effort, is their non-presence a detriment?

There are many coders (software not Morse) that know and fully
understand digital hardware and write the apps that make them work. Is
not having them become hams because they feel no need to learn about
the RF end a detriment?

>
>Times change, progress is necessary ... please learn to accept some
>change so we can catch up with the times ... otherwise, we'll soon not

>have ham radio in any form ... our bands are too valuable to devote to a
>nostalgia clique ...
>
Ham radio for many years was on the cutting edge of technology but
then there were no advanced commercial R&D labs full of BSEEs and
MSEEs. Times have changed and are changing still. Dropping the code
requirement and changing this and that will not allow the hobbyists to
compete, much less catch up, in terms of technological advancement
against a single two billion dollar a year company.

I, and I imagine many others, are not against change with valid
reasons, but to change JUST because some would rather bitch and moan
about not having HF phone privileges because of a code requirement
that a grammar schooler can pass is not a very valid reason. "I can't"
is not a very valid excuse but the FCC will accept it if the section
of the 610 titled "Physician's Certification of Disability" is
completed and signed by a doctor of medicine (MD) or doctor of
osteopathy (DO).

Twenty years have passed since you got your license Carl and you
haven't:
1 - applied yourself and put forth the effort to raise your code speed
to 13 wpm. You learned the code and passed the 5 wpm test and back
then it was one minute of solid copy, no fill in the blank or multiple
guess like it is today. i.e.
your copy: n_me sere ih b_b.
question: the operator's name is
a - bib
b - bab
c - bob
d - maximillian
2 - created a new mode that can be used in place of OOK to operate a
basic, simple, unmodified Pierce oscillator as a means of
communication.

I guess you're too busy bitching and moaning to accomplish either of
the two. Oh well, it seems rather clear that ALL THEY WANT IS HF PHONE
PRIVILEGES.

Put that wetware to good use and perhaps we can discuss how to save
amateur radio on HF but until then I think I'll study some advanced
class theory. If and when the no-code general become a reality I want
to be able to slip in to the advanced phone sub-band as a refuge from
hordes of new ops that will be advancing the technology via their
newly found HF phone privileges.

Recently I purchased a Samsung 2417 dot matrix printer that I thought
I might use with my packet station. It turns out I did not get a copy
of the driver disk and would appreciate someone pointing me in the right
direction for finding one.

I've got an Extra FNB-41 (HiPower) HT battery for a FT10/40/50 that I don't need. It's been charged twice. I will ship it US priority mail anywhere in the US for $29.00
